

Clean plastic packaging

Plastic packaging is packaging that has contained food, hygiene articles and other household items.

Plastic bags and wrapping

Plastic cups, tubes and bottles from food and beverages

Plastic bottles and tubes from detergents and hygiene articles

Flowerpots made from plastic

Empty snuff boxes

Becomes raw material for new plastic items. Non-recyclable plastic is used in energy recovery.

Food waste

Waste from cooking and meals. Remember to eat all your food!

Shell, peel, and scraps

Coffee filter with grounds, tea bags and dirty paper towels with food and grease

Leftovers and bones from meat, fish, and shellfish

Becomes environmentally friendly biofertilizer for agriculture and biogas for garbage trucks and heavy transport.

Remember to put the three different bags into the same container.

Residual waste

Residual waste is waste that can't be sorted elsewhere.

Small amounts of flowers and potted plants

Gift wrapping and ribbons

Diapers, sanitary napkins, tampons, condoms, wet wipes, and other hygiene articles

Small amounts of styrofoam

Packaging from mixed materials, like bags from coffee and chips with silver film inside

Residual waste goes into a regular shopping bag.

Becomes environmentally friendly district heating and electricity after incineration.

Cardboard, paper, and beverage carton

Fold before putting it in the container, so it will be room for more.

Newspapers, magazines, and folders

Cartons from food and products

Juice and milk cartons

Paper is thrown directly in the container, not in bags.

Becomes into new paper and cardboard.

Glass and metal packaging

Glass and metal packaging is packaging that has contained food, beverages and other household items.

Aluminium foil, moulds, and non-recyclable cans

Glass jars and bottles

Tin cans

Thin metal cups from tea-lights

Metal tubes and bottle caps

Return point for glass and metal packaging.

Becomes into new glass and metal products.

Clothes, shoes, and other textiles

Everything you hand in must be dry, clean and in bags. That applies to both whole and damaged textiles.

T-shirts, jackets and pants

Towels, bed linens and curtains

Usable shoes, purses and belts (damaged items must be disposed in residual waste)

Textile collection.

Usable clothes and textiles are either reused or redesigned. Damaged textiles can be used in new products.

At the recycling stations at Grønmo, Haraldrud and Smestad you can deliver*:
