

MSc in Entrepreneurship Programme

What is the programme about?

- **The overall purpose** of the MSc in Entrepreneurship programme is to educate ambitious students planning for a career combining both technology/natural sciences and business.
- **Your target job after graduation** is developing and commercializing new products and services in either large established enterprises or newly formed startup firms. Some of you also dream of founding your own company when you feel ready.

What differentiates this programme from others?

- **Both corporate and new venture entrepreneurship** – The programme trains all students in both starting and growing a company from scratch and working with innovation projects in large existing organizations. The training is reinforced through real life semester long projects. To our knowledge, we are the only programme in the Nordics with such an offering:
 - **Real life training in starting your own firm in StartupLab** During the second semester student groups operating as founding teams develop and execute their own project from scratch sitting jointly together with real firms in StartupLab, an on-campus incubators.
 - **Real life training in corporate entrepreneurship within a global firm** - During the third semester student groups operating as corporate teams develop a real innovation project within one of Norway's largest and most attractive global firms.
- We are currently in the process of closing partnerships with a selected group of firms headquartered in Oslo with a global footprint within their respective industries. The career opportunities for programme students will obviously be significant.

Other features

- **Optional summer internship abroad** Experiencing the entrepreneurial culture first hand working as an intern in a local startup company for ten weeks in either San Francisco, Boston or Toronto.
