MiningSuite

<http://bit.ly/miningsuite>

Olivier Lartillot

MiningSuite

- Complete redesign, extension, of *MIRtoolbox*
- *MIRtoolbox* focused on audio-based Music Information Retrieval
- Very easy to use
- Powerful modularity: Enables to design and perform complex analyses easily.
- Free, open-source
- Reference tool in the MIR community
 - 10000s of users around the world, 1000+ citations

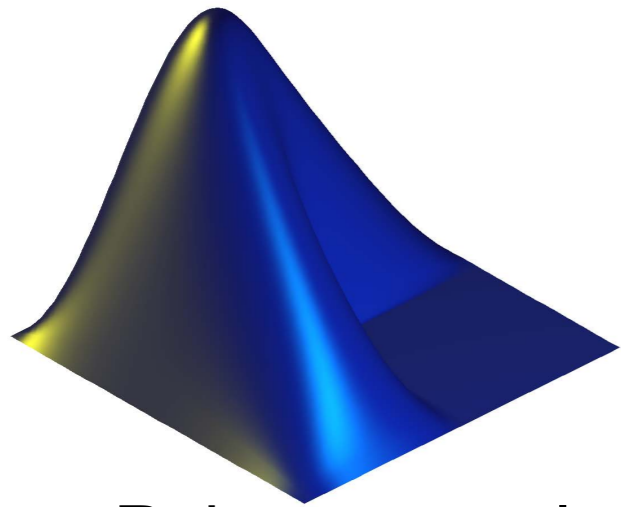

MiningSuite

- Extensive suite of tools to analyse signals, audio recordings, music, gestures, etc.
- Common framework to analyse multiple modalities together
- Simpler architecture, simpler code
 - Additional layer of syntax enabling to write simple code
- Open-source, shared GitHub repository

MiningSuite

- **SIGMINR**: signal processing
- **AUDMINR**: audio, auditory modelling
- **MUSMINR**: music analysis
- **VOCMINR**: voice analysis
- **VIDMINR**: video analysis
- **PHYMINR**: motion, physics
- **PSYMINR**: brain imaging

PHYMINR

- Being currently integrated to the MiningSuite GitHub repository
- Ongoing research topics:
 - Comparison music / mocap
 - Crossmodal cross-correlation
 - Audio being itself multichannel (filterbank decomposition)
 - Analysis of multidimensional multimodal data
 - Periodicity analysis
 - Dimension reduction
