Artificial Intelligence (AI) is in the headlines these days. Industry seems now determined to exploit AI-techniques for a broad range of applications. Scientists from nearly all disciplines are attracted by the idea of approaching their own specific problems by AI-methodologies. Ordinary people are stunned by the inconceivable capabilities of AI-systems and feel uneasy about the prospects of this technology.

# Så: hvordan utvikler en maskinlæringsmodeller?

1. En klar idé om hva som skal gå inn (data) og ut (resultat)
2. Fortrinnssvis merkede data
3. En god definisjon av hva vi vil oppnå (et avvik vi vil minimere)
4. (hyppig) testing av modellen på nye data

hva kan gå galt  
med maskinlæring?

# JOURNAL

# racisme

A blot on the profession

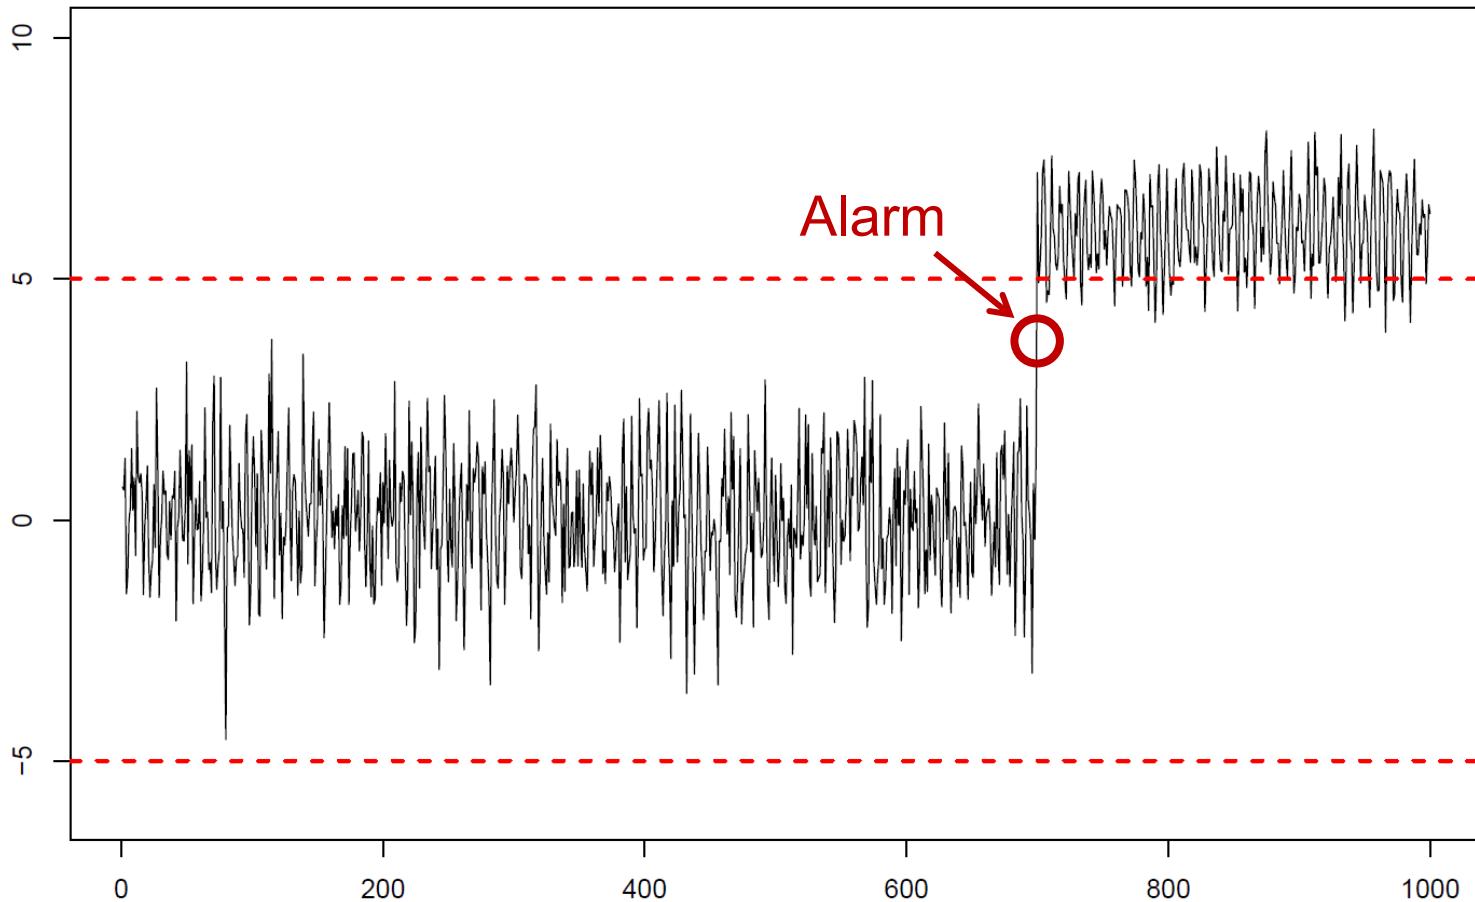

Discrimination in medicine against women and members of ethnic minorities has long been suspected,<sup>1-3</sup> but it has now been proved. St George's Hospital Medical School has been found guilty by the Commission for Racial Equality of practising racial and sexual discrimination in its admissions policy.<sup>4</sup> The commission does not have a discrimination notice in the school, which it is empowered to do by the Race Relations Act, but a man, Dr G. S. O. applicant each year among 200 may have been refused an interview purely because of their sex or racial origin. This is a sad finding not only for St George's Hospital Medical School but for the whole profession. It is now important not only that discrimination is swept out of St George's and the profession

reassuring as it raises the question of what is happening in the other schools.

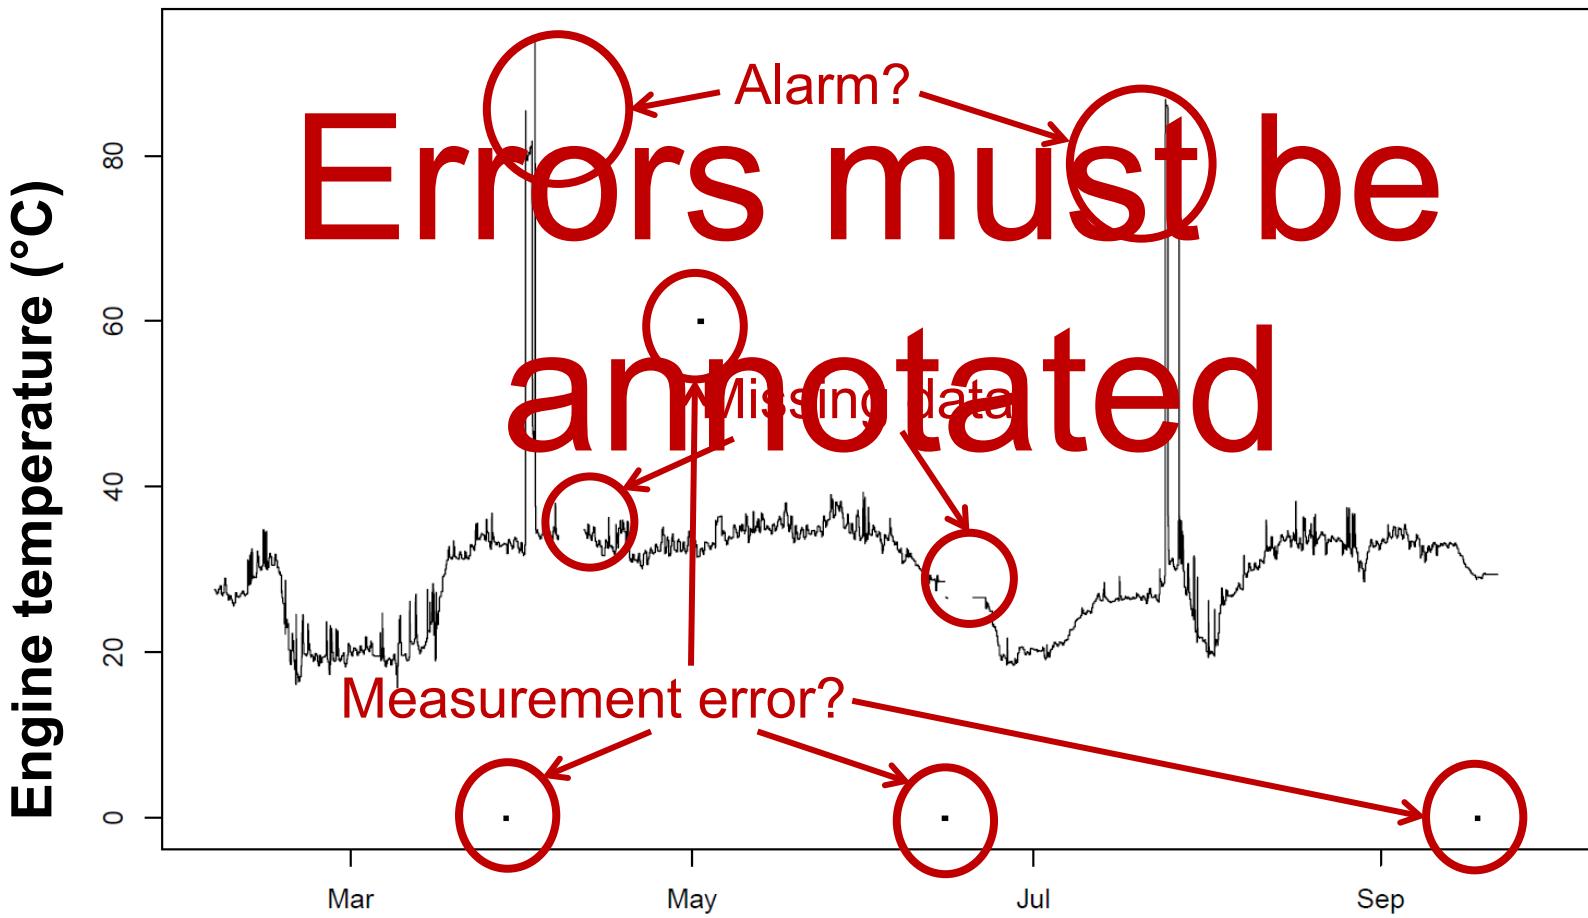

The commission has made recommendations not just about this particular episode but also about how other schools can avoid similar difficulties. It is emphasised that where a computer program is used as part of the selection process all members of staff taking part have responsibility to find out what it contains. The major criticism of the staff at St George's was that many had no idea of the contents of the program and those who did failed to report the bias. All staff participating in selection should be trained so that they are aware of the risk of discrimination and try to eliminate it. No one person should have sole responsibility for any stage of the
