

Problem 1

a) Evidences for shell Model

- 2-proton / 2-neutron separation energy
- ...

b) Look at atomic vs nuclear shell model

atomic: L-S between electron mag. moment & magnetic field by its motion around nucleus → small shifts

vs (44)

nucleon-nucleon spin-orbit force
 ↳ major reorientation of levels

c) 2, 8, 20, 28, 50, 82, 126, 184 (non-deformed case)

d) 0^+

e) for 'ug' ⇒ J^π of the unpaired nucleon

f) Coupling of free proton and neutron $\vec{J} = \vec{S}_1 + \vec{S}_2$

other effect not covered:

- coupling of more than 1 valence nucleon
- pair breaking

• collective structure \Rightarrow big research topic in Octo

↳ vibrations and rotations

"What's the shape of a nucleus"

g) see Mayer-kuckuck

Deuteron and the nuclear force

a) p-n bound state, but not p-p, or n-n

\Rightarrow nuclear force is spin dependent, and on whether spins are parallel ($\uparrow\uparrow$) or antiparallel ($\uparrow\downarrow$)
(or triplet)

\hookrightarrow bound with $l=0 \Rightarrow$ special case symmetrical under exchange

As the force is believed to be charge independent, n-n and n-p would have same lowest level, $l=0$

But for n-n, and p-p, as fermions, they need to have diff. quantum numbers $\Rightarrow \uparrow\downarrow$

vs p-n that can be in the triplet " $\uparrow\uparrow$ " ...

b) Expected values for I ; $I^{\pi}_{ass} = 0^+$, $g_{\sigma} = 2^+$ 4^+ .

$$I = s_n + s_p + l$$

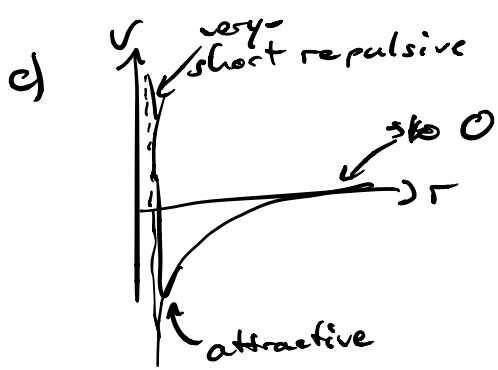

so. triplett: $I=1$, singlet $= I=0$
 $\uparrow\uparrow$ $\uparrow\downarrow$
 (\dots)

	l	
$\uparrow\uparrow$	0	} not possible, as $\pi_{ass} = +$; and $\pi = \pi (-1)^l$
$\uparrow\downarrow$	1	
$\uparrow\uparrow$	1	
$\uparrow\uparrow$	2	

c) $g_{s_n} = -3.82$ $g_{s_p} = 5.58$
 l_{spin}
 non-zero: inner structure

d) $\mu_{dent} \neq \mu(l=0)$

$$\mu_{dent} = a_s^2 \mu(l=0) + a_d^2 \mu(l=2) \Rightarrow \text{mixed wave}$$

\Rightarrow mixed wave
 tk. not a pure state
 tensor force

$$f) V_{nuc} = V_{central} + V_{spin} + V_{(S_1 \cdot r)(S_2 \cdot r)} + (V_{rep?})$$

$l_{spin} \text{ dep } (\uparrow\uparrow \text{ or } \uparrow\downarrow)$
