Forward kinematics: Find the end effector given the joint variables.

All we need is the transformations $\mathrm{H}_{1}^{0}, \mathrm{H}_{2}^{\prime} \ldots$ and multiply them!

DH-convention: Streamlines the process -> "recipe for forward kinematics"

- Provides a universal language to describe a manipulator.
-- As long as we follow the rules set by DH.

Coordinate systems:
Rule 1: $X_{i} \perp 2 i-1$
Rule 2: $X_{i}$ has to intersect $2 i-1$ Lo move oi if not
$z$ in the direction of action.
y from right hand rule.

Example: Coordinate frames for the cylindrical manipulator.

Assignment: Assign coordinate frames to the manipulator from the 2018 exam.

DH parameters: (page 110 step 7)
$\Theta_{i}$ : Joint angle, the angle from $x_{i-1}$ to $x_{i}$ measured about $z_{i-1}$
$\mathrm{d}_{\mathrm{i}}$ : Link offset, distance from $\mathrm{O}_{\mathrm{i}-\mathrm{l}}$ about $\mathrm{z}_{\mathrm{i}-1}$ to the intersection of $\mathrm{x}_{\mathrm{i}}$ and $\mathrm{z}_{\mathrm{i}-1}$
$\mathrm{a}_{\mathrm{i}}$ : Link length, distance from the intersection of $\mathrm{x}_{\mathrm{i}}$ and $\mathrm{z}_{\mathrm{i}-1}$ to $\mathrm{O}_{\mathrm{i}}$
$a_{i}$ : Link twist, the angle from $z_{i-1}$ to $z_{i}$ measured about $x_{i}$

Example: Parameter table for the cylindrical manipulator

| Link | $\theta_{i}$ | $d_{i}$ | $a_{i}$ | $\alpha_{i}$ |
| :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |
| 2 |  |  |  |  |

| $子$ |  |  |  |  |

Assignment: Fill in the parameter table for the 2018 manipulator.
