

Contents

	Preface	vii
PART A	ANTECHAMBER	1
1	Database Systems	3
	1.1 The Main Principles	3
	1.2 Functionalities	5
	1.3 Complexity and Diversity	7
	1.4 Past and Future	7
	1.5 Ties with This Book	8
	Bibliographic Notes	9
2	Theoretical Background	10
	2.1 Some Basics	10
	2.2 Languages, Computability, and Complexity	13
	2.3 Basics from Logic	20
3	The Relational Model	28
	3.1 The Structure of the Relational Model	29
	3.2 Named versus Unnamed Perspectives	31
	3.3 Conventional versus Logic Programming Perspectives	32
	3.4 Notation	34
	Bibliographic Notes	34

PART B	BASICS: RELATIONAL QUERY LANGUAGES	35
4	Conjunctive Queries	37
4.1	Getting Started	38
4.2	Logic-Based Perspectives	40
4.3	Query Composition and Views	48
4.4	Algebraic Perspectives	52
4.5	Adding Union	61
	Bibliographic Notes	64
	Exercises	65
5	Adding Negation: Algebra and Calculus	70
5.1	The Relational Algebras	71
5.2	Nonrecursive Datalog with Negation	72
5.3	The Relational Calculus	73
5.4	Syntactic Restrictions for Domain Independence	81
5.5	Aggregate Functions	91
5.6	Digression: Finite Representations of Infinite Databases	93
	Bibliographic Notes	96
	Exercises	98
6	Static Analysis and Optimization	105
6.1	Issues in Practical Query Optimization	106
6.2	Global Optimization	115
6.3	Static Analysis of the Relational Calculus	122
6.4	Computing with Acyclic Joins	126
	Bibliographic Notes	134
	Exercises	136
7	Notes on Practical Languages	142
7.1	SQL: The Structured Query Language	142
7.2	Query-by-Example and Microsoft Access	149
7.3	Confronting the Real World	152
	Bibliographic Notes	154
	Exercises	154
PART C	CONSTRAINTS	157
8	Functional and Join Dependency	159
8.1	Motivation	159
8.2	Functional and Key Dependencies	163
8.3	Join and Multivalued Dependencies	169

8.4	The Chase	173
	Bibliographic Notes	185
	Exercises	186
9	Inclusion Dependency	192
9.1	Inclusion Dependency in Isolation	192
9.2	Finite versus Infinite Implication	197
9.3	Nonaxiomatizability of fd's + ind's	202
9.4	Restricted Kinds of Inclusion Dependency	207
	Bibliographic Notes	211
	Exercises	211
10	A Larger Perspective	216
10.1	A Unifying Framework	217
10.2	The Chase Revisited	220
10.3	Axiomatization	226
10.4	An Algebraic Perspective	228
	Bibliographic Notes	233
	Exercises	235
11	Design and Dependencies	240
11.1	Semantic Data Models	242
11.2	Normal Forms	251
11.3	Universal Relation Assumption	260
	Bibliographic Notes	264
	Exercises	266
PART D	DATALOG AND RECURSION	271
12	Datalog	273
12.1	Syntax of Datalog	276
12.2	Model-Theoretic Semantics	278
12.3	Fixpoint Semantics	282
12.4	Proof-Theoretic Approach	286
12.5	Static Program Analysis	300
	Bibliographic Notes	304
	Exercises	306
13	Evaluation of Datalog	311
13.1	Seminaive Evaluation	312
13.2	Top-Down Techniques	316
13.3	Magic	324

13.4	Two Improvements	327
	Bibliographic Notes	335
	Exercises	337
14	Recursion and Negation	342
14.1	Algebra + <i>While</i>	344
14.2	Calculus + Fixpoint	347
14.3	Datalog with Negation	355
14.4	Equivalence	360
14.5	Recursion in Practical Languages	368
	Bibliographic Notes	369
	Exercises	370
15	Negation in Datalog	374
15.1	The Basic Problem	374
15.2	Stratified Semantics	377
15.3	Well-Founded Semantics	385
15.4	Expressive Power	397
15.5	Negation as Failure in Brief	406
	Bibliographic Notes	408
	Exercises	410
PART E	EXPRESSIVENESS AND COMPLEXITY	415
16	Sizing Up Languages	417
16.1	Queries	417
16.2	Complexity of Queries	422
16.3	Languages and Complexity	423
	Bibliographic Notes	425
	Exercises	426
17	First Order, Fixpoint, and While	429
17.1	Complexity of First-Order Queries	430
17.2	Expressiveness of First-Order Queries	433
17.3	<i>Fixpoint</i> and <i>While</i> Queries	437
17.4	The Impact of Order	446
	Bibliographic Notes	457
	Exercises	459
18	Highly Expressive Languages	466
18.1	<i>While_N</i> — <i>while</i> with Arithmetic	467
18.2	<i>While_{new}</i> — <i>while</i> with New Values	469

18.3	<i>While_{uty}</i> —An Untyped Extension of <i>while</i>	475
	Bibliographic Notes	479
	Exercises	481
PART F	FINALE	485
19	Incomplete Information	487
19.1	Warm-Up	488
19.2	Weak Representation Systems	490
19.3	Conditional Tables	493
19.4	The Complexity of Nulls	499
19.5	Other Approaches	501
	Bibliographic Notes	504
	Exercises	506
20	Complex Values	508
20.1	Complex Value Databases	511
20.2	The Algebra	514
20.3	The Calculus	519
20.4	Examples	523
20.5	Equivalence Theorems	526
20.6	Fixpoint and Deduction	531
20.7	Expressive Power and Complexity	534
20.8	A Practical Query Language for Complex Values	536
	Bibliographic Notes	538
	Exercises	539
21	Object Databases	542
21.1	Informal Presentation	543
21.2	Formal Definition of an OODB Model	547
21.3	Languages for OODB Queries	556
21.4	Languages for Methods	563
21.5	Further Issues for OODBs	571
	Bibliographic Notes	573
	Exercises	575
22	Dynamic Aspects	579
22.1	Update Languages	580
22.2	Transactional Schemas	584
22.3	Updating Views and Deductive Databases	586
22.4	Updating Incomplete Information	593
22.5	Active Databases	600

22.6	Temporal Databases and Constraints	606
	Bibliographic Notes	613
	Exercises	615
	Bibliography	621
	Symbol Index	659
	Index	661
