Bio-inspired Computing for Robots and Music

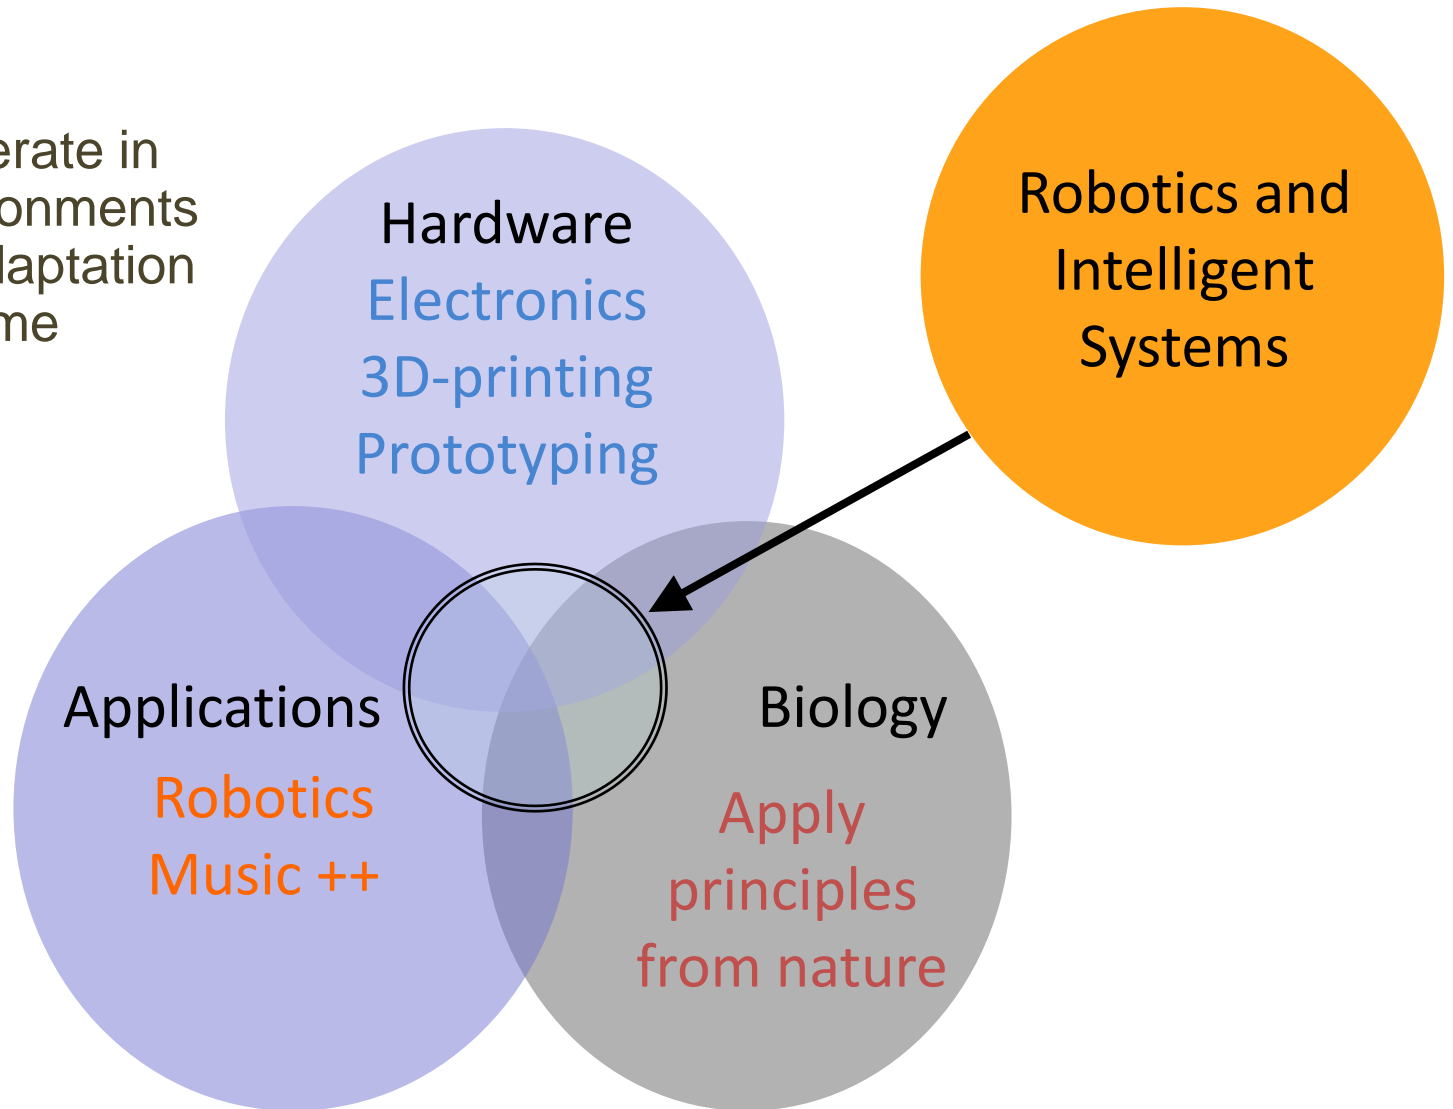

Jim Tørresen

Research group Robotics and Intelligent Systems

Robotics and Intelligent Systems group

Systems operate in dynamic environments demanding adaptation at run-time

Research

- Bio-inspired systems and machine learning
 - Evolutionary computation
 - Ant colony optimization
- Robotics
 - Custom built robots (3D-printing/milling)
 - Self-learning of control
 - Robot surgery
- Reconfigurable logic (FPGA)
 - Dynamic change of configuration
 - Self-learning and adaptive systems
 - Development of remote teaching labs
- Music technology
 - Analyze motion for flexible music control
 - Develop active music systems

State-of-the-art Rapid Prototyping Facilities

- 3D printers and milling machines
- Large potential for developing innovative robot systems.

Robot Simulation in NVIDIA PhysX

- Work with real robot and simulator/models
- Co-evolve robot shape and walking pattern
- Study and try to reduce gap between reality and simulation

Evolved Control Systems

- We can evolve movement patterns!
 - Parameterize periodic functions for each joint
 - Evolve all those parameters

Evolved Robot Design

- Robot bodies could be difficult to design by hand.
- We use evolutionary algorithm to evolve both body and control system simultaneously.

Video Reuters

Bio-inspired Computing for Music

State-of-the-art Motion Capture Facilities

- Allows precise tracking of human and robot motion
- Camera-based and on-body motion capture

Sound Saber

Sound Saber

EPiCS – Self-aware systems (EU proj.)

epiCS

Engineering Proprioception
in Computing Systems

- Human/nature-inspired algorithms for self-awareness and self-expression
- Application: active music
- Collab: 8 European partners

(Inter) Active Music

Direct Control

- Navigate within the song
- Control certain instruments (e.g. keep playing the chorus drumbeat in the verse)
- Change the tempo of the song

Indirect Control

- Use on-body sensors to adapt the music to the mood of the user
- Listen to music that pushes you to work out harder
- Fuse the musical preferences of multiple users into one song

Ant Colony Optimization (ACO)

- Ants find shortest path to food source from nest.
- Ants deposit pheromone along traveled path which is used by other ants to follow the trail.
- This kind of indirect communication via the local environment is called

Funky Sole Music

		current state			
		1-FullRelease	2-ToePress	3-HeelPress	4-FullPress
previous state	1-FullRelease	2	0	1	0
	2-ToePress	1	2	0	0
	3-HeelPress	0	0	1	1
	4-FullPress	0	1	1	1

- Combination of sound samples and synthesis
- Hierarchy of loops, controlled by the user
- Various sound effects are controllable when in different “states” (i.e., for different walking patterns)

Video Reuters

PheroMusic: Navigating a Musical Space

Direct + Indirect Control Combined

PheroMusic app

- Control by ant colony optimization

INTROMAT: INtroducing personalized TReatment Of Mental health problems using Adaptive Technology (2016-2022)

Goal: Increase access to **mental health** services for common mental health problems by developing **smartphone technology** which can **guide patients**.

Funding: *IKTPLUS Lighthouse, Research Council of Norway*

**The Research Council
of Norway**

MECS: Multi-sensor Elderly Care Systems

1 PhD (Trenton Schulz) + 2 postdocs (2015-2019)

Goal: Create and evaluate multimodal mobile human supportive systems that are able to **sense, learn and predict future events.**

Project consortium:

- Robotics and Intelligent Systems group (coordinator)
- DESIGN group (IFI)
- National:
 - Oslo Municipality (Oslo kommune, Gamle Oslo)
 - Norwegian Centre for Integrated Care and Telemedicine (Tromsø)
 - XCENTER AS (3D sensor)
 - Novelda AS (ultra wideband sensor)
- International:
 - University of Hertfordshire
 - University of Reading Whiteknights
 - Giraff Technologies AB

Funding: *IKTPLUS*,
Research Council of Norway
(10% of proposals funded)

**The Research Council
of Norway**

EPEC: Prediction and Coordination for Robots and Interactive Music

1 PhD (Tønnes Nygaard) + 2 post-docs (Charles Martin
and Kai Olav Ellefsen) 2015-2019

Goal: *Design, implement and evaluate multi-sensor systems that are able to sense, learn and predict future actions and events.*

Funding: *FRIPRO, Research Council of Norway*

**The Research Council
of Norway**
