### **INF3510 Information Security**

### Lecture 01:

- Course info
- Basic concepts in information security

University of Oslo, spring 2014

### Course organisation

- Course activities
  - Attend 2 hours lectures per week
    - · Lecture notes available at least one day prior to lecture
  - Work on the workshop questions
    - Will be discussed during the following week's workshop which follows immediately after the 2-hour lecture
  - Work on the home exam
    - Topic for the assignment can be freely chosen.
- Not just about facts, you also need to
  - understand concepts
  - apply those concepts
  - think about implications
  - understand limitations

### Course information

- Course organization
- Prerequisites
- Syllabus and text book
- Lecture plan
- Home exam
- Assessment and exams
- Security education
- AFSecurity

UiO Spring 2014

L01 - INF3510 Information Security

,

### Course Resources

- Learning material will be made available on:
  - http://www.uio.no/studier/emner/matnat/ifi/INF3510/v14/
  - lecture presentations, workshop questions, etc.
  - List of English security terms translated to Norwegian
- Assignment topic for home exam on:
  - https://wiki.uio.no/mn/ifi/INF3510-2014
- Various online resources
  - E.g. NIST special computer security publications http://csrc.nist.gov/publications/PubsSPs.html

### Lecturer

- Prof. Audun Jøsang,
- Education
  - Baccalaureat, Lycée Corneille, France, 1981
  - BSc Telematics, NTH 1987
  - MSc Information Security, Royal Holloway College, London, 1993
  - PhD Information Security, NTNU, 1998
  - CISSP 2005, CISM 2010,
- Work
  - System design engineer, Alcatel, Belgium 1988-1992
  - Associate Professor, NTNU, 1998-1999
  - Research Leader, DSTC, Australia 2000-2004
  - Associate Professor, QUT, Australia, 2005-2007
  - Professor, UiO, 2008 →

UiO Spring 2014

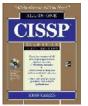

L01 - INF3510 Information Security

5

### Syllabus and text book

- The syllabus for this course consists of the material presented during the lectures, as described in the lecture notes.
- Adequate comprehension of the material requires that you also
  - read parts of the text book and other documents
  - work out answers to the workshop questions
  - follow the lectures.
- Text book: CISSP All-in-One Exam Guide 6<sup>th</sup> Edition, 2013

Author: Shon Harris

Shon Harris

7

- The book covers the 10 CBK domains (Common Body of Knowledge) for the CISSP Exam (Certified Information Systems Security Professional).
- Easy to order book from amazon.com, price: US\$ 50
   http://www.amazon.com/CISSP-All-One-Guide-Edition/dp/0071781749

### **Prerequisites**

- Prerequisites
  - Basic computer and network technology
  - Basic mathematics
- Theoretic focus on a basic level
  - Discrete mathematics, number theory, modular arithmetic
  - Information theory
  - Probability calculus
  - Computer and network architecture

UiO Spring 2014

L01 - INF3510 Information Security

6

### How to use Harris' CISSP book (6th ed.)

- 1430 pages in total
  - But exclude
    - Ch.1 (Becoming a CISSP)
    - 50 pages of appendix, glossary and index
    - 300 pages of tips, Q&A
    - Parts of chapters
  - Around 800 pages of readable material
  - The book is very easy to read ☺
  - Sometimes long explanations and examples ☺
- Each chapter has Main Sections (big font) and Subsections (small font), but no numbering, a bit confusing.
- Don't read distracting comments in italics under section titles

	Week	Date	#	Topic			
Draft Lecture Plan	W03	16.01.2014	1	Course Information. Basic Concepts in IS			
	W04	23.01.2014	2	IS Management, Human Factors for IS			
	W05	30.01.2014	3	Risk Management and Business Continuity Planning			
	W06	06.02.2014	4	Computer Security			
	W07	13.02.2014	5	Cryptography			
	W08	Winter break					
	W09	27.02.2014	6	Key Management and PKI			
	W10	06.03.2014	7	Digital Forensics			
	W11	13.03.2014	8	User Authentication			
	W12	20.03.2014	9	Identity Management and Access Control			
	W13	27.03.2014	10	Network Security			
	W14	03.04.2014	11	Network Perimeter Security			
	W15	10.04.2014	12	Operations Security and Cyber Warfare			
	W16	Easter break					
	W17	24.04.2013	13	Security applications			
	W18	No lecture					
	W19	No lecture					
	W20	No lecture					
	W21	22.05.2014		Review			
	W22		No lecture				
	W23	03.06.2014	Exam tim	ne: 09:00h - 13:00h (4 hours)			

### Assessment and Marking

Course weight: 10 study points

Assessment items:

Home exam: weight 0.4Written exam: weight 0.6

Required to get a pass score on both assessment items

- At least 40% on home exam and 40% on written exam

- Relatively easy to get a high score on home exam

- Relatively difficult to get a high score on written exam

 Academic dishonesty (including plagiarism and cheating) is actively discouraged

• See: http://www.uio.no/english/studies/admin/examinations/cheating/

• Should be no problem ©

### Home Exam

- Write an essay on a security topic chosen by you
- Individual, or in group of 2 or 3 students
- Select topic and specify group on wiki https://wiki.uio.no/mn/ifi/INF3510-2014/
- Length: 5000 10000 words (approx. 10 15 pages)

Due date: 14.05.2014Assessment criteria:

Structure and presentation: weight ¼
Scope and depth of content: weight ¼

- Evidence of independent research and analysis: weight 1/4

- Proper use of references: weight 1/4

UiO Spring 2014

L01 - INF3510 Information Security

10

### Statistics from previous exams

Year	# students	# A (%)	# B (%)	# C (%)	# D (%)	# E (%)	# F (%)		
2010	58	1 (2%)	15 (26%)	25 (43%)	7 (12%)	3 (5%)	7 (12%)		
2011	70	1 (2%)	10 (14%)	33 (47%)	9 (13%)	10 (14%)	7 (10%)		
2012	34	2 (6%)	6 (18%)	14 (41%)	0 (0.0%)	6 (17.5%)	6 (17.5%)		
2013		For the 2013 spring semester the course was cancelled due to university politics.							

11

### Other security courses at UiO

- UNIK4220 Introduction to Cryptography (autumn)
  - Leif Nilsen (Thales)
- UNIK4250 Security in Distributed Systems (spring)
  - Josef Noll (IfI)
- UNIK4270 Security in Operating Systems and Software (autumn)
  - Audun Jøsang (IfI)
- INF5150 Unassailable IT-systems (autumn)
  - Ketil Stølen (SINTEF)
- ITLED4230 Ledelse av informasjonssikkerhet (autumn)
  - Audun Jøsang
  - Only for professionals (fee NOK 25K)

UiO Spring 2014

L01 - INF3510 Information Security

13

15

### Certifications for IS Professionals

- Many different types of certifications available
  - vendor neutral or vendor specific
  - from non-profit organisations or commercial for-profit organisations
- Certification gives assurance of knowledge and skills,
  - needed in job functions
  - gives credibility for consultants, applying for jobs, for promotion
- Sometimes required
  - US Government IT Security jobs
- Knowledge domains reflect current topics in IT Security
  - Generally kept up-to-date

### Why study information security?

- Being an IT expert requires knowledge about IT security
  - Imagine architects without knowledge about fire safety
- Building IT systems without considering security will lead to vulnerable IT systems
- Our IT infrastructure is vulnerable to cyber attacks
- If you are an IT expert without security skills you are part of the problem!
- Learn about IT security to become part of the solution
- Information security is a political issue
  - Increased cost in short term, but saves costs in long term
  - Must compete with other disciplines in IT industry and education

UiO Spring 2014

L01 - INF3510 Information Security

11

### **ISACA Certifications**

(Information Systems Audit and Control Association)

- ISACA provides certification for IT professionals
  - CISM Certified Information Security Manager
  - CISA Certified Information System Auditor
  - CGIT Certified in the Governance of Enterprise IT
  - CRSIC Certified in Risk and Information Systems Control
- CISM is the most popular ISACA security certification
- IT auditors and consultants commonly have ISACA certifications
- ISACA promotes IT governance framework COBIT (Control Objectives for Information and Related Technologies)

### CISM: Certified Information Security Manager

- Focuses on 4 domains of IS management
  - 1. Information Security Governance
  - 2. Information Risk Management
  - 3. Information Security Program Development and Management
  - 4. Information Security Incident Management

https://www.isaca.org/bookstore/

Price: US \$115 (\$85 for ISACA members)

https://www.isaca.org/bookstore/Pages/CISM-Exam-Resources.aspx

UiO Spring 2014

L01 - INF3510 Information Security

17

19

### (ISC)<sup>2</sup> Certifications

International Information Systems Security Certification Consortium

- (ISC)<sup>2</sup> provides certification for information security professionals
  - CISSP Certified Information Systems Security Professional
  - ISSAP Information Systems Security Architecture Professional
  - ISSMP Information Systems Security Management Professional
  - ISSEP Information Systems Security Engineering Professional
  - CAP - Certification and Accreditation Professional
  - SSCP Systems Security Certified Practitioner
  - CSSLP Certified Secure Software Lifecycle Professional

L01 - INF3510 Information Security

- CISSP is the most common IT security certification
  - Most IT Security Consultants are CISSP

### **CISM Exam**

- Exams normally twice per year worldwide
  - also in Oslo
- Multiple choice questions
- Register for exam at www.isaca.org
  - Exam fee approx. US \$500
  - Requires 5 years professional experience
  - Yearly CISM maintenance fee approx. US \$100
  - Requires 120 hours "practice time" per 3 years

UiO Spring 2014

L01 - INF3510 Information Security

### CISSP Exam:

### Certified Information System Security Professional

- Many different books to prepare for CISSP exam
- e.g. text book used for INF3510 course

CISSP All-in-One Exam Guide 6<sup>th</sup> Edition, 2013 Author: Shon Harris

- €560 fee to sit CISSP exam
- Exam every Tuesday, Kompetansehuset Imente, Drammen
- By appointment through http://www.pearsonvue.com/isc2/
- Most of the of the material presented in the INF3510 course is taken from the syllabus of the CISSP CBK (Common Body of Knowledge).

UiO Spring 2014

### CISSP CBK (Common Body of Knowledge)

- Access Control (user authentication and identity management)
- 2. Telecommunications and Network Security
- 3. Information Security
  Management and Risk
  Management
- 4. Application Security (software security)
- 5. Cryptography

- 6. Security Architecture and Design (computer security)
- 7. Operations Security
- 8. Business Continuity
  Planning and Disaster
  Recovery Planning
- Legal Regulations, Compliance and Investigation (forensics)
- 10. Physical and Environmental Security

UiO Spring 2014

L01 - INF3510 Information Security

21

23

### **Security Advisories**

- Useful for learning about new threats and vulnerabilities
  - NorCERT: For government sector: https://www.nsm.stat.no/
  - NorSIS: For private sector: http://www.norsis.no/
  - US CERT: http://www.cert.org/
  - Australia AusCERT: http://www.auscert.org.au/
  - + many others

### **Security Surveys**

- Useful for knowing the trend and current state of information security threats and attacks
  - CSI Computer Crime & Security Survey (http://gocsi.com/survey)
  - Verizon Data Breach Report:
     http://www.verizonenterprise.com/resources/reports/es\_data-breach-investigations-report-2013\_en\_xg.pdf
  - PWC: http://www.pwc.com/gx/en/consulting-services/information-security-survey/
  - US IC3 (The Internet Crime Complaint Center): http://www.ic3.gov/media/annualreports.aspx
  - Mørketallsundersøkelsen; http://www.nsr-org.no/moerketall/
  - + many others

UiO Spring 2014

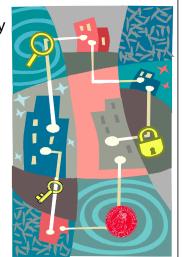

L01 - INF3510 Information Security

2

### Academic Forum on Security

- Monthly seminar on information security
- https://wiki.uio.no/mn/ifi/AFSecurity/
- Guest speakers
- Next AFSecurity:
  - Thursday 16 January 2014, 14:00h
  - Topic: Bitcoin
  - Speaker: Mikal Vike Villa, independent security expert
- All interested are welcome!

### **AFSecurity**

### Good and bad translation **English** Norwegian Security Sikkerhet Safety Trygghet Certainty Visshet Security Safety Sikkerhet Certainty UiO Spring 2014 L01 - INF3510 Information Security 27

# Information Security Basic Concepts

### What is security in general

- Security is about protecting assets from damage or harm
- Focuses on all types of assets
  - Example: your body, possessions, the environment, the nation
- Security and related concepts
  - National security (political stability)
  - Safety (health)
  - Environmental security (clean environment)
  - Information security
  - etc.

### What is *Information* Security

- Information Security focuses on protecting information assets from damage or harm
- What are the assets to be protected?
  - Example: data files, software, IT equipment and infrastructure
- Covers both intentional and accidental events
  - Threat agents can be people or acts of nature
  - People can cause harm by accident or by intent
- Information Security defined:
  - The preservation of confidentiality, integrity and availability of information; in addition, other properties such as authenticity, accountability, non-repudiation and reliability can also be involved. (ISO27001)

UiO Spring 2014

L01 - INF3510 Information Security

29

31

### The Need for Information Security

- Why not simply solve all security problems once for all?
- Reasons why that's impossible:
  - Rapid innovation constantly generates new technology with new vulnerabilities
  - More activities go online
  - Crime follows the money
  - Information security is a second thought when developing IT
  - New and changing threats
  - More effective and efficient attack technique and tools are being developed
- Conclusion: Information security doesn't have a final goal, it's a continuing process

### Scope of information security

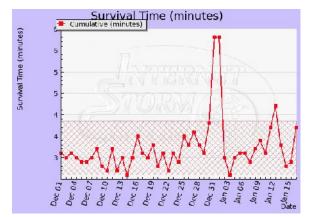

- IS management has as goal to avoid damage and to control risk of damage to information assets
- IS management focuses on:
  - Understanding threats and vulnerabilities
  - Managing threats by reducing vulnerabilities or threat exposures
  - Detection of attacks and recovery from attacks
  - Investigate and collect evidence about incidents (forensics)

UiO Spring 2014

L01 - INF3510 Information Security

3

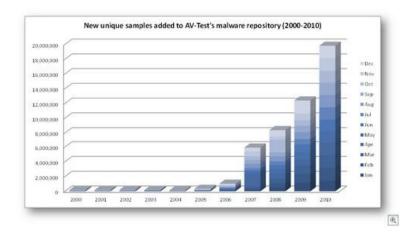

### Internet Storm Survival Time Measure

The survival time is calculated as the average time between attacks against average target IP address. http://isc.sans.org/survivaltime.html

UiO Spring 2014

### Malware Trend

UiO Spring 2014

L01 - INF3510 Information Security

33

### Security control categories

### **Physical controls**

- Facility protection
- Security guards
- Locks
- Monitoring
- Environmental controls
- Intrusion detection

## Technical controls

### •Logical access control

- •Cryptographic controls
- •Security devices
- •User authentication
- •Intrusion detection
- •Forensics

# Administrative controls

- Policies
- Standards
- •Procedures & practice
- Personnel screening
- Awareness training

### **National Security**

- Many critical components of nations depend on IT
  - Critical Infrastructure Protection (CIP)
- Many IT systems are by themselves critical components
  - Critical Information Infrastructure Protection (CIIP)
- The accumulated set of non-critical systems (e.g. servers and networks in SMEs) becomes critical
- IT systems are both targets and weapons of attack in industrial, political and international conflicts
- The vulnerability of the critical information structure is worrisome and needs attention

UiO Spring 2014

L01 - INF3510 Information Security

34

### Security control functional types

- Preventive controls:
  - prevent attempts to exploit vulnerabilities
    - Example: encryption of files
- Detective controls:
  - warn of attempts to exploit vulnerabilities
    - Example: Intrusion detection systems (IDS)
- Corrective controls:

UiO Spring 2014

- correct errors or irregularities that have been detected.
  - Example: Restoring all applications from the last known good image to bring a corrupted system back online
- Use a combination of controls to help ensure that the organisational processes, people, and technology operate within prescribed bounds.

UiO Spring 2014

L01 - INF3510 Information Security

35

L01 - INF3510 Information Security

36

### **Information States**

- Information security involves protecting information assets from harm or damage.
- Information is considered in one of three possible states:
  - Storage
    - Information storage containers electronic, physical, human
  - Transmission
    - · Physical or electronic
  - Processing (use)
    - · Physical or electronic
- Security controls for all information states are needed

UiO Spring 2014

L01 - INF3510 Information Security

37

39

### Security services and controls

- Security services (aka. goals or properties)
  - implementation independent
  - supported by specific controls
- Security controls (aka. mechanisms)
  - Practical mechanisms, actions, tools or procedures that are used to provide security services

### **Security services:**

e.g. Confidentiality - Integrity - Availability

e.g. Encryption – Firewalls – Awareness

UiO Spring 2014

L01 - INF3510 Information Security

### Security Services and Properties

- · A security service is a high level security property
- The traditional definition of information security is to preserve the three CIA properties for data and services:
  - Confidentiality:
  - Integrity
  - Availability:

The CIA properties are the three main security services

UiO Spring 2014

L01 - INF3510 Information Security

20

### Confidentiality

- The property that information is not made available or disclosed to unauthorized individuals, entities, or processes. (ISO 27001)
- Can be divided into:
  - Secrecy: Protecting business data
  - Privacy: Protecting personal data
  - Anonymity: Hide who is engaging in what actions
- Main threat: Information theft
- Controls: Encryption, Access Control, Perimeter defence

UiO Spring 2014

### Integrity

- Data Integrity: The property that data has not been altered or destroyed in an unauthorized manner. (X.800)
- **System Integrity:** The property of safeguarding the accuracy and completeness of assets (ISO 27001)
- Main threat: Data and system corruption
- Controls:
  - Cryptographic integrity check,
  - Encryption,
  - Access Control
  - Perimeter defence
  - Audit
  - Verification of systems and applications

UiO Spring 2014

L01 - INF3510 Information Security

41

### Authenticity (Security Service)

The CIA properties are quite general security services. Other security services are often mentioned. Authentication is very important, with various types:

- User authentication:
  - The process of verifying a claimed identity of a (legal) user when accessing a system or an application.

- Organisation authentication:
  - The process of verifying a claimed identity of a (legal) organisation in an online interaction/session

- System authentication (peer entity authentication):
  - The corroboration (verification) that a peer entity (system) in an association (connection, session) is the one claimed (X.800).

UiO Spring 2014

- Data origin authentication (message authentication):
  - The corroboration (verification) that the source of data received is as claimed (X.800).

L01 - INF3510 Information Security

### Availability

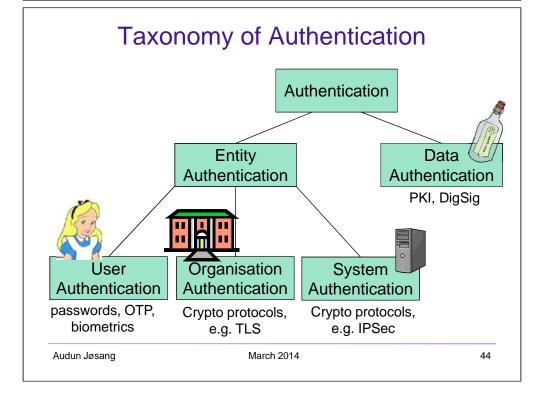

- The property of being accessible and usable upon demand by an authorized entity. (ISO 27001)
- Main threat: Denial of Service (DoS)
  - The prevention of authorized access to resources or the delaying of time critical operations
- Controls: Redundancy of resources, traffic filtering, incident recovery, international collaboration and policing

UiO Spring 2014

L01 - INF3510 Information Security

42

### User Identification and Authentication

- Identification
  - Who you claim to be
  - Method: (user)name, biometrics
- User authentication
  - Prove that you are the one you claim to be
- Main threat: Unauthorized access
- Controls:
  - Passwords.
  - Personal cryptographic tokens,
    - OTP generators, etc.
  - Biometrics
    - Id cards
  - Cryptographic security/authentication protocols

UiO Spring 2014

L01 - INF3510 Information Security

45

### **Data Origin Authentication** (Message authentication)

• Goal: Recipient of a message (i.e. data) can verify the correctness of claimed sender identity

L01 - INF3510 Information Security

- But 3rd party may not be able to verify it
- Main threats:
  - False transactions
  - False messages and data
- Controls:
  - Encryption with shared secret key
  - MAC (Message Authentication Code)
  - Security protocols
  - Digital signature with private key
  - Electronic signature,
    - · i.e. any digital evidence

Authentication token

### System Authentication

- Establish the correct identity of remote hosts

- Main threat:
  - Network intrusion
  - Masquerading attacks,
  - Replay attacks
  - (D)DOS attacks
- Controls:
  - Cryptographic authentication protocols based on hashing and encryption algorithms
  - Examples: TLS, VPN, IPSEC

UiO Spring 2014

L01 - INF3510 Information Security

Host B

Host A

### Accountability

(Security Service)

- · Goal: Trace action to a specific user and hold them responsible
  - Audit information must be selectively kept and protected so that actions affecting security can be traced to the responsible party (TCSEC/Orange Book)
- Main threats:
  - Inability to identify source of incident
  - Inability to make attacker responsible
- Controls:
  - Identify and authenticate users
  - Log all system events (audit)
  - Electronic signature
  - Non-repudiation based on digital signature
  - Forensics

UiO Spring 2014

### Non-Repudiation

(Security Service)

- Goal: Making sending and receiving messages undeniable through unforgible evidence.
  - Non-repudiation of origin: proof that data was sent.
  - Non-repudiation of delivery: proof that data was received.
  - NB: imprecise interpretation: Has a message been received and read just because it has been delivered to your mailbox?
- Main threats:
  - Sender falsely denying having sent message
  - Recipient falsely denying having received message
- Control: digital signature
  - Cryptographic evidence that can be confirmed by a third party
- Data origin authentication and non-repudiation are similar
  - Data origin authentication only provides proof to recipient party
  - Non-repudiation also provides proof to third parties

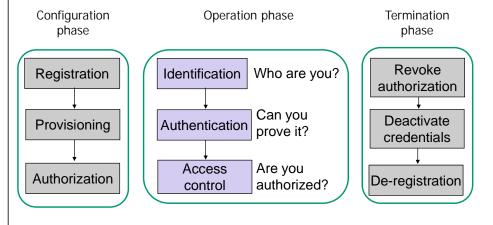

UiO Spring 2014

L01 - INF3510 Information Security

49

51

# Identity and Access Management (IAM) Phases

### UiO Spring 2014 L01 - INF3510 Information Security

### **Authorization**

- Authorization is to specify access and usage permissions for entities, roles or processes
  - Authorization policy normally defined by humans
  - Issued by an authority within the domain/organisation
- · Authority can be delegated
  - Management → Sys.Admin
  - Implemented in IT systems as configuration/policy
- Beware of confusion (also in Harris text book):
  - Correct: Harris 6<sup>th</sup> ed. p.161: "A user may be authorized to access the files on the file server, but until she is properly identified and authenticated, those resources are out of reach."
  - Wrong: Harris 6<sup>th</sup> ed. p.161: "If the system determines that the subject may access the resource, it authorizes the subject".

UiO Spring 2014

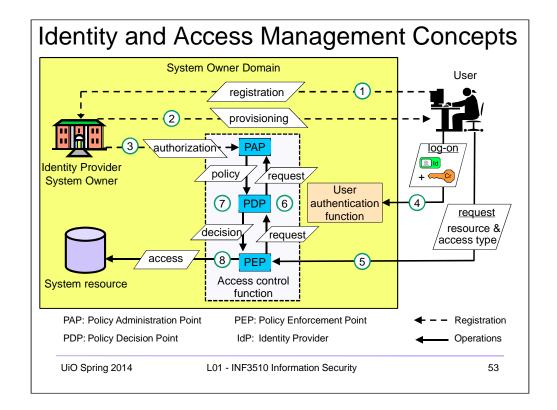

L01 - INF3510 Information Security

50

### Confusion about Authorization

- The term "authorization" is often wrongly used in the sense of "access control"
  - e.g. "If the system determines that the subject may access the resource, it authorizes the subject" (e.g. Harris 6<sup>th</sup> ed. p.161)
  - Common in text books and technical specifications (RFC 2196 ...)
  - Cisco AAA Server (Authentication, Authorization and Accounting)
- Wrong usage of "authorization" leads to absurd situations:
  - 1. You get somebody's password, and uses it to access account
  - 2. Login screen gives warning: "Only authorized users may access this system"
  - 3. You are caught and taken to court
  - 4. You say: "The text book at university said I was authorized if the system granted access, which it did, so I was authorized"

UiO Spring 2014

# End of lecture
