

## 7.2

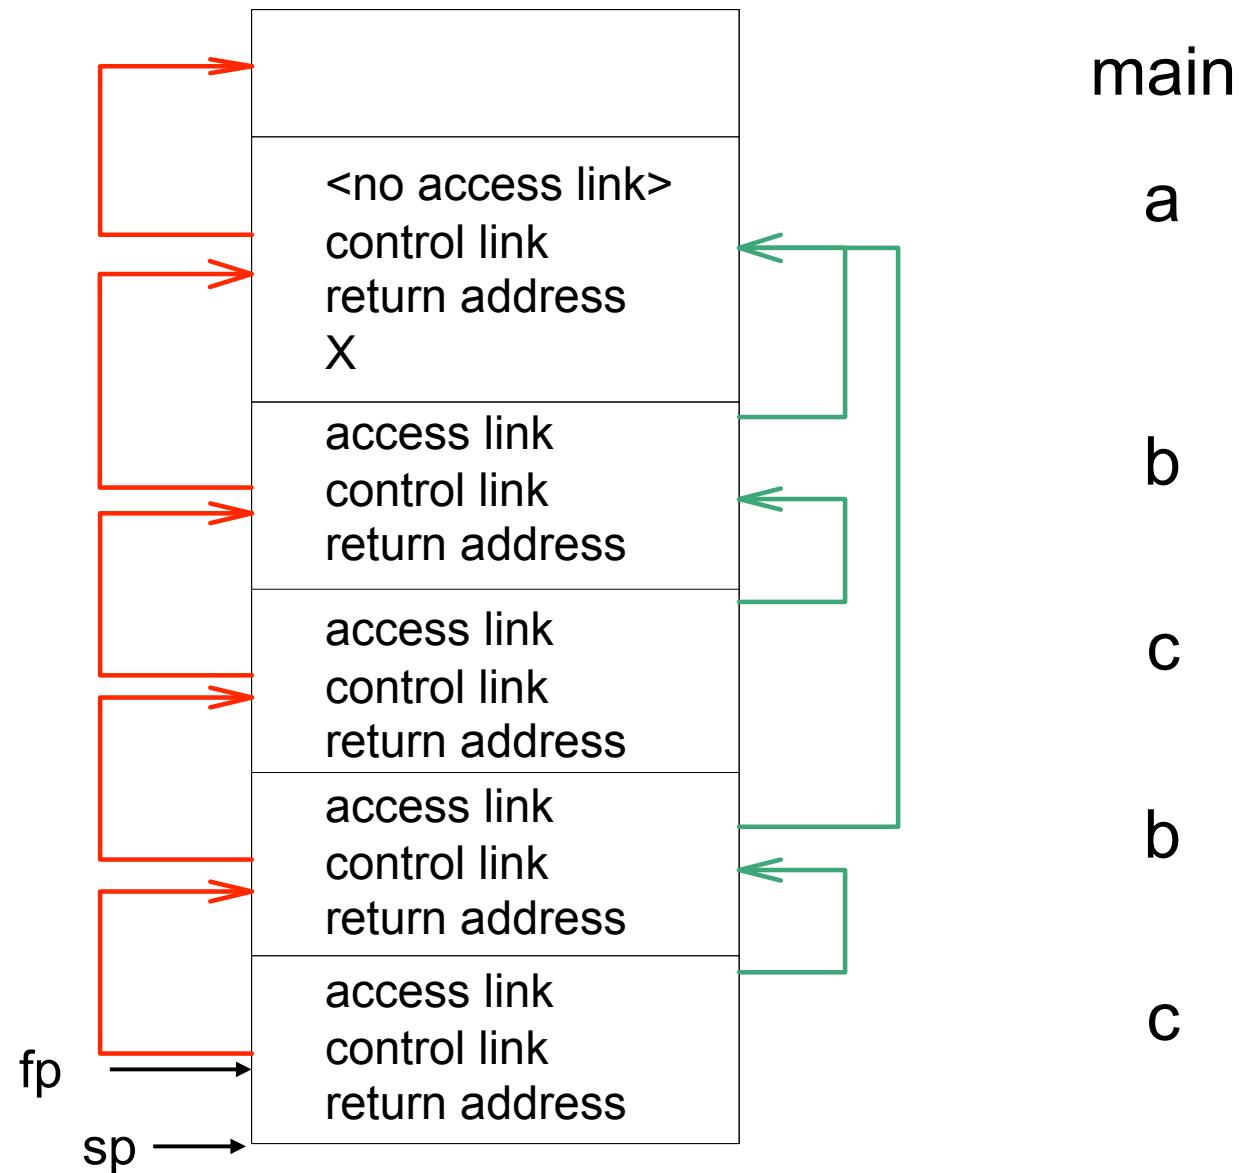

a.

b.

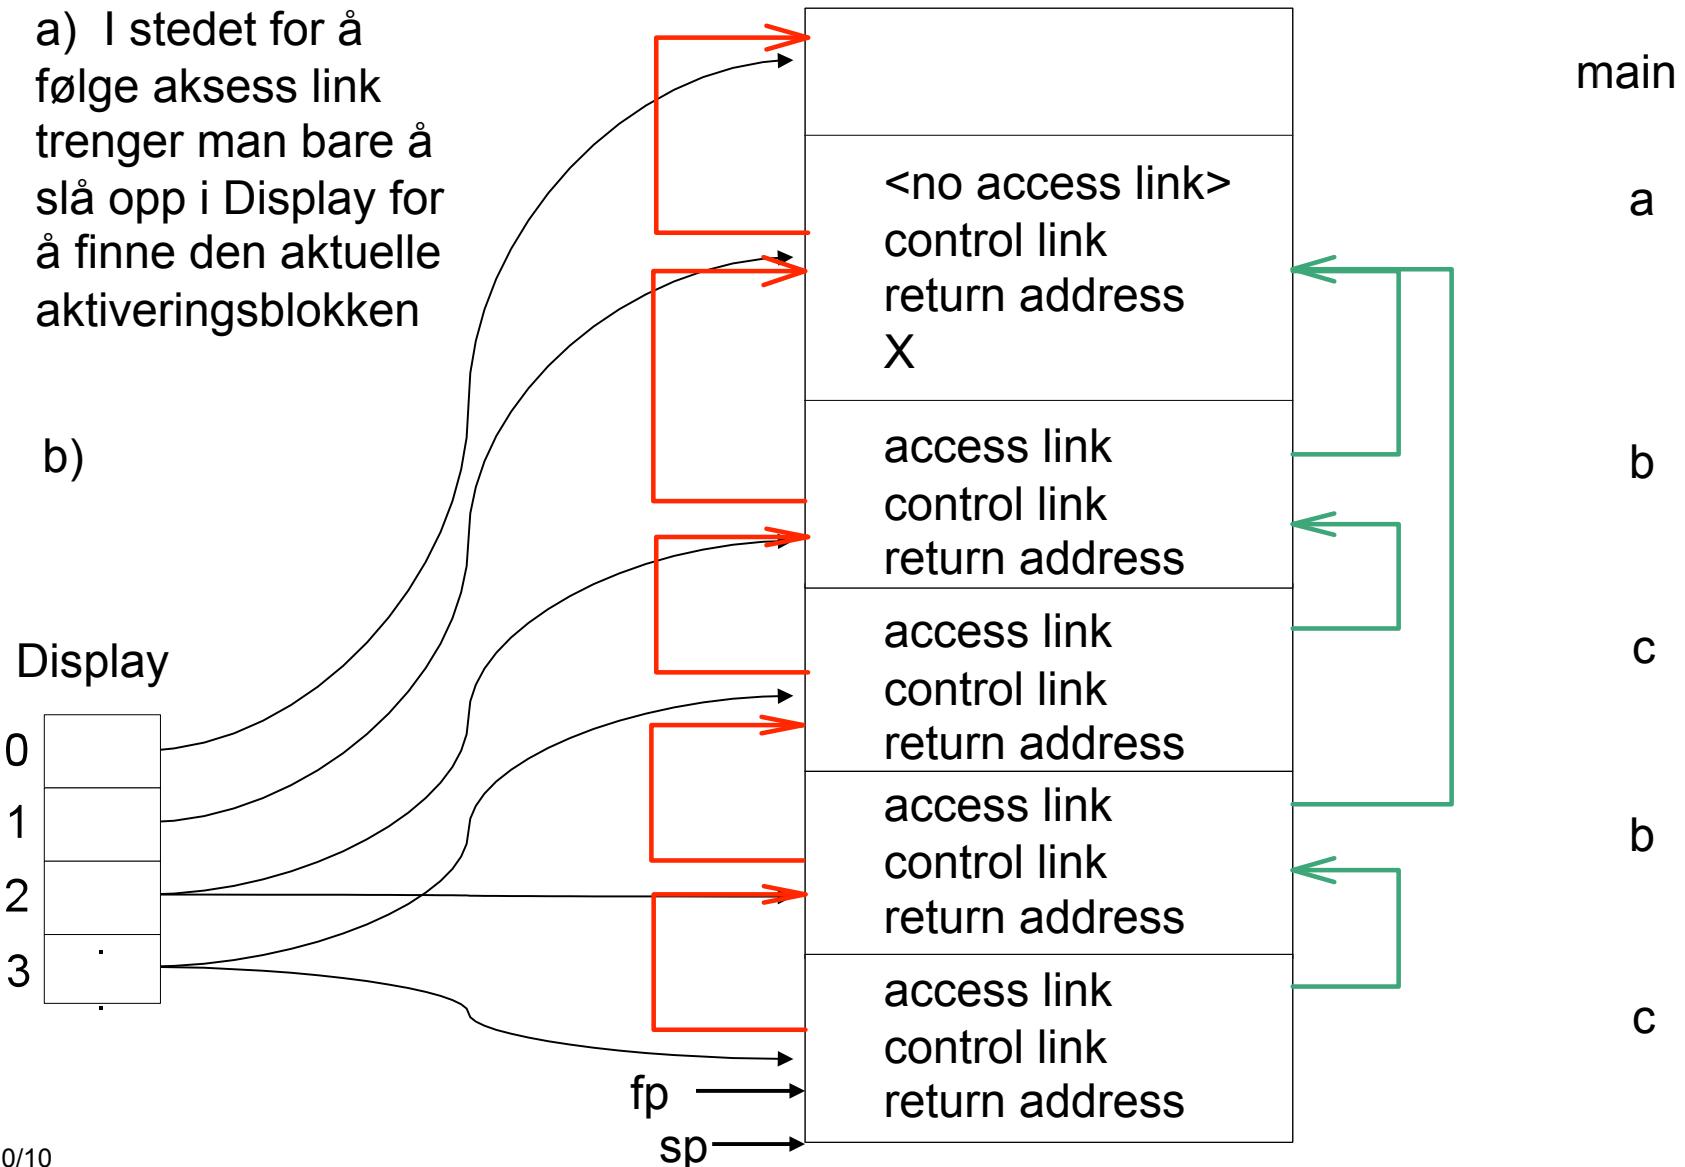

## 7.4

## 7.10

- a) I stedet for å følge aksess link trenger man bare å slå opp i Display for å finne den aktuelle aktiveringsblokken

b)

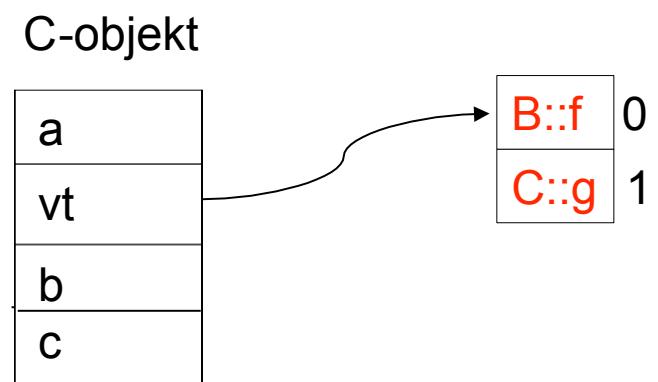

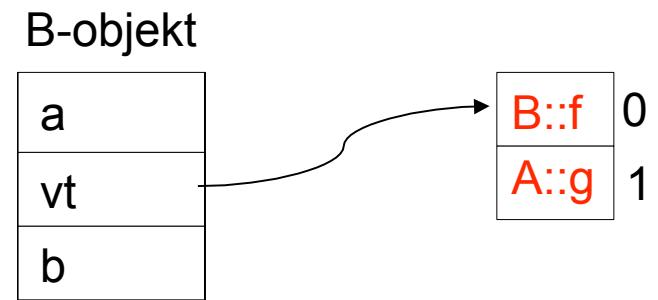

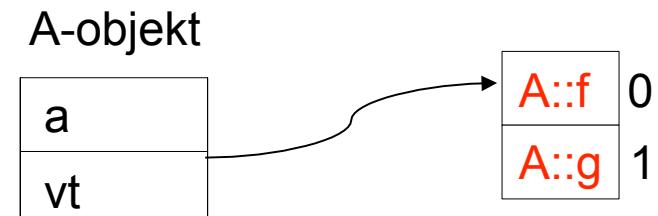

**7.13** Draw the memory layout of objects of the following C++ classes, together with the virtual function tables as described in Section 7.4.2:

```
class A
{ public:
    int a;
    virtual void f();
    virtual void g();
};

class B : public A
{ public:
    int b;
    virtual void f();
    void h();

};

class C : public B
{ public:
    int c;
    virtual void g();
}
```

**7.15** Give the output of the following program (written in C syntax) using the four parameter passing methods discussed in Section 7.5:

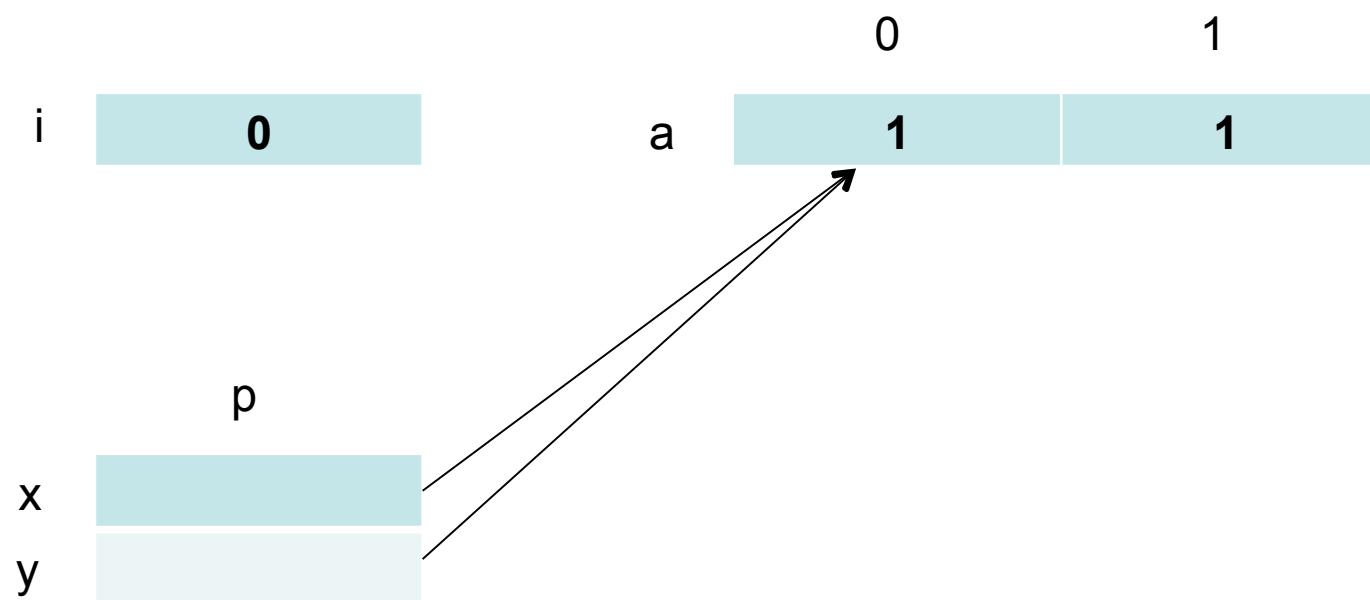

```
#include <stdio.h>
int i=0;

void p(int x, int y)
{ x += 1;
  i += 1;
  y += 1;
}

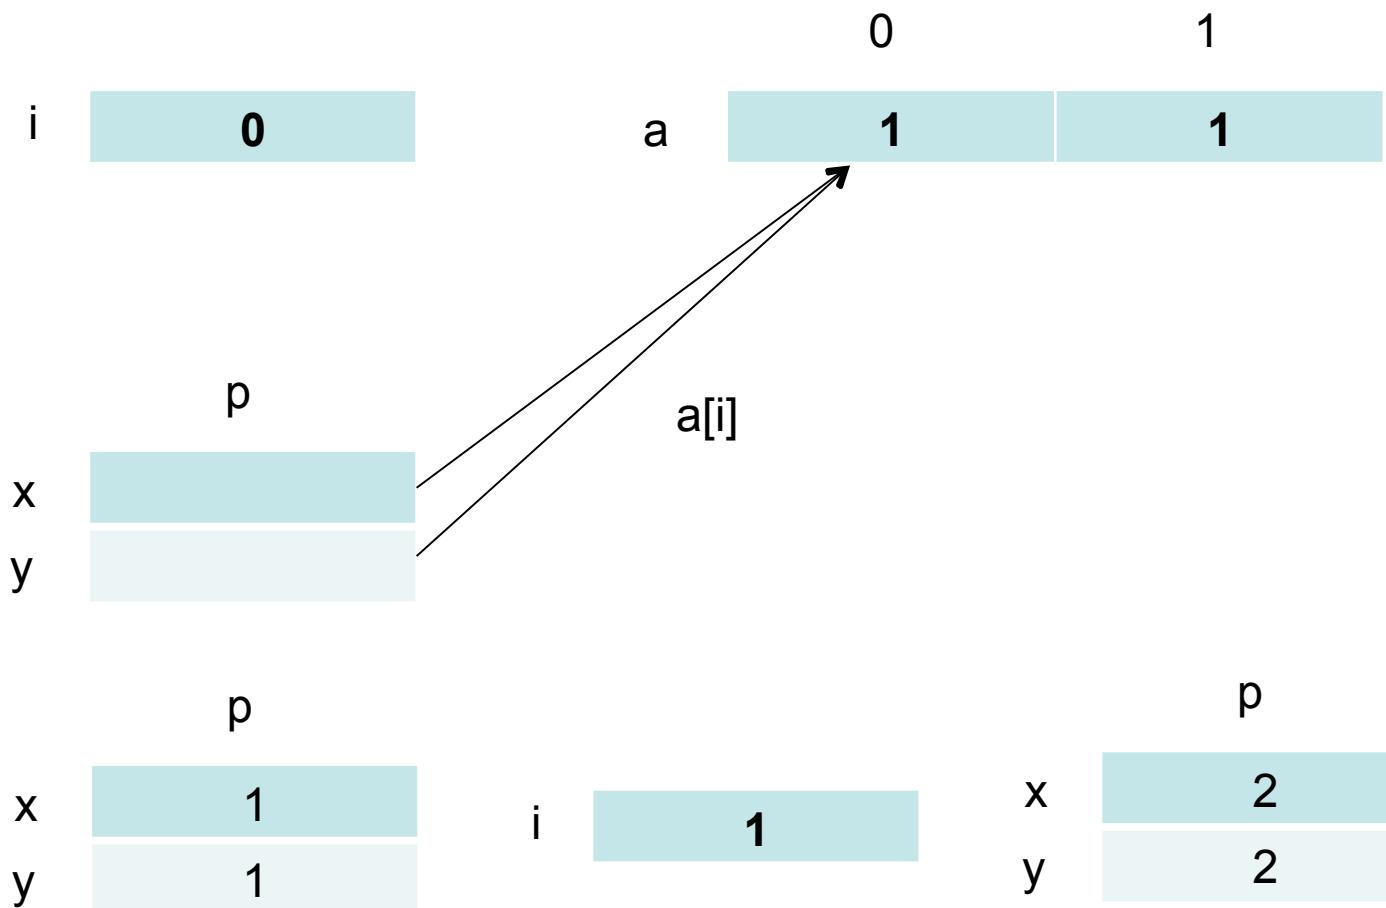

main()
{ int a[2]={1,1};
  p(a[i],a[i]);
  printf("%d %d\n",a[0],a[1]);
  return 0;
}
```

by value	by reference
1 1	3 1
by value-result	by name
2 1 1 2	2 2

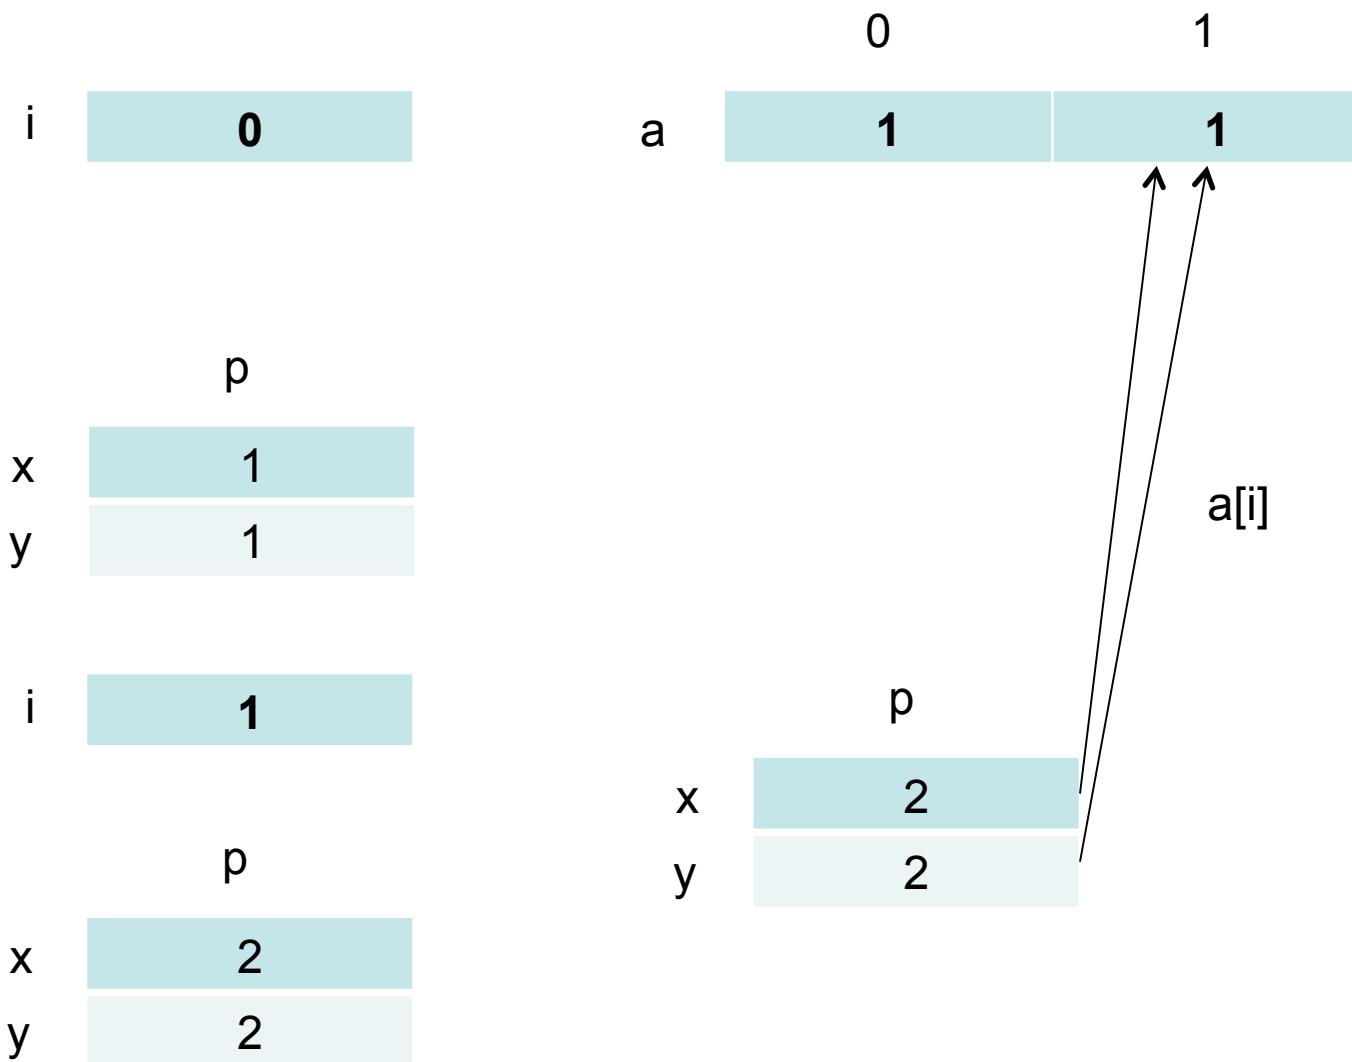

## 7.15 by reference

## 7.15 by value-result – address at call

## 7.15 by value-result – address at exit

## 7.15 by name

$$a(i) = a(i) + 1 \quad == \quad a(0) = a(0) + 1 = 1 + 1 = 2$$

$$i = i + 1 \quad == \quad i = 0 + 1 = 1$$

$$a(i) = a(i) + 1 \quad == \quad a(1) = a(1) + 1 = 1 + 1 = 2$$

## 7.16

Give the output of the following program (in C syntax) using the four parameter passing methods of Section 7.5:

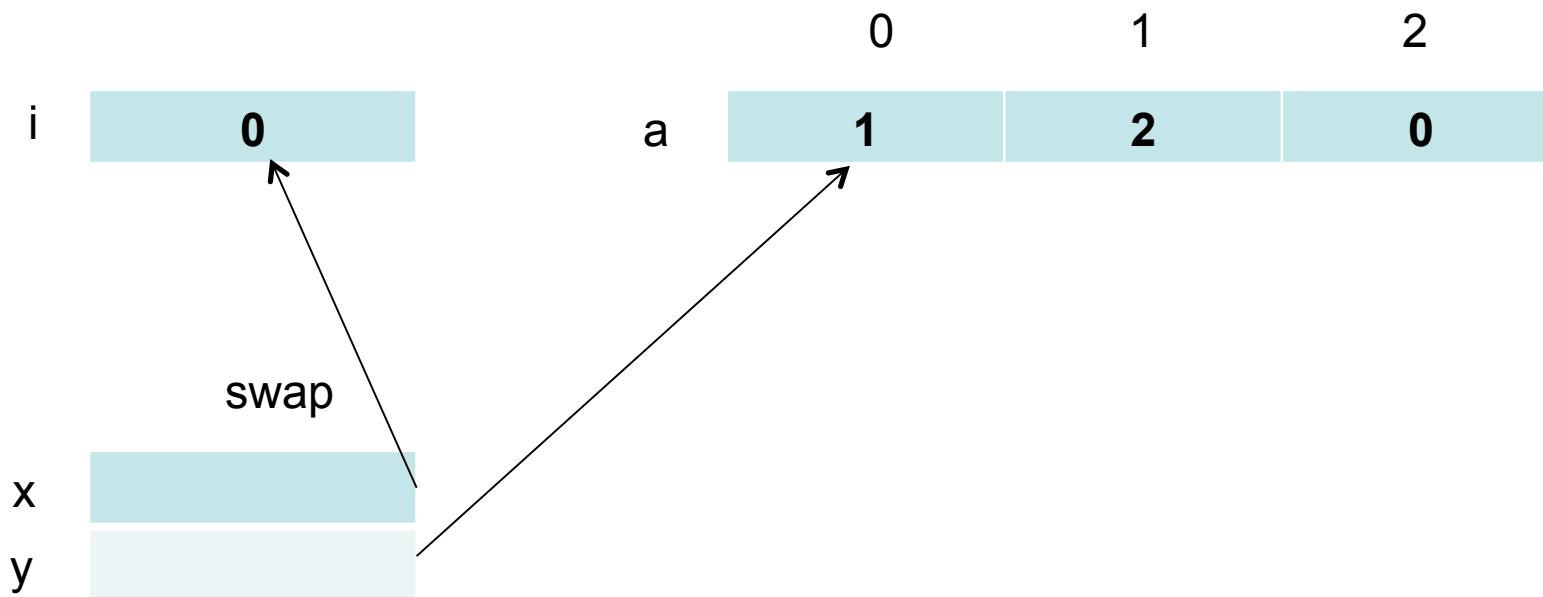

```
#include <stdio.h>
int i=0;

void swap(int x, int y)
{ x = x + y;
  y = x - y;
  x = x - y;
}

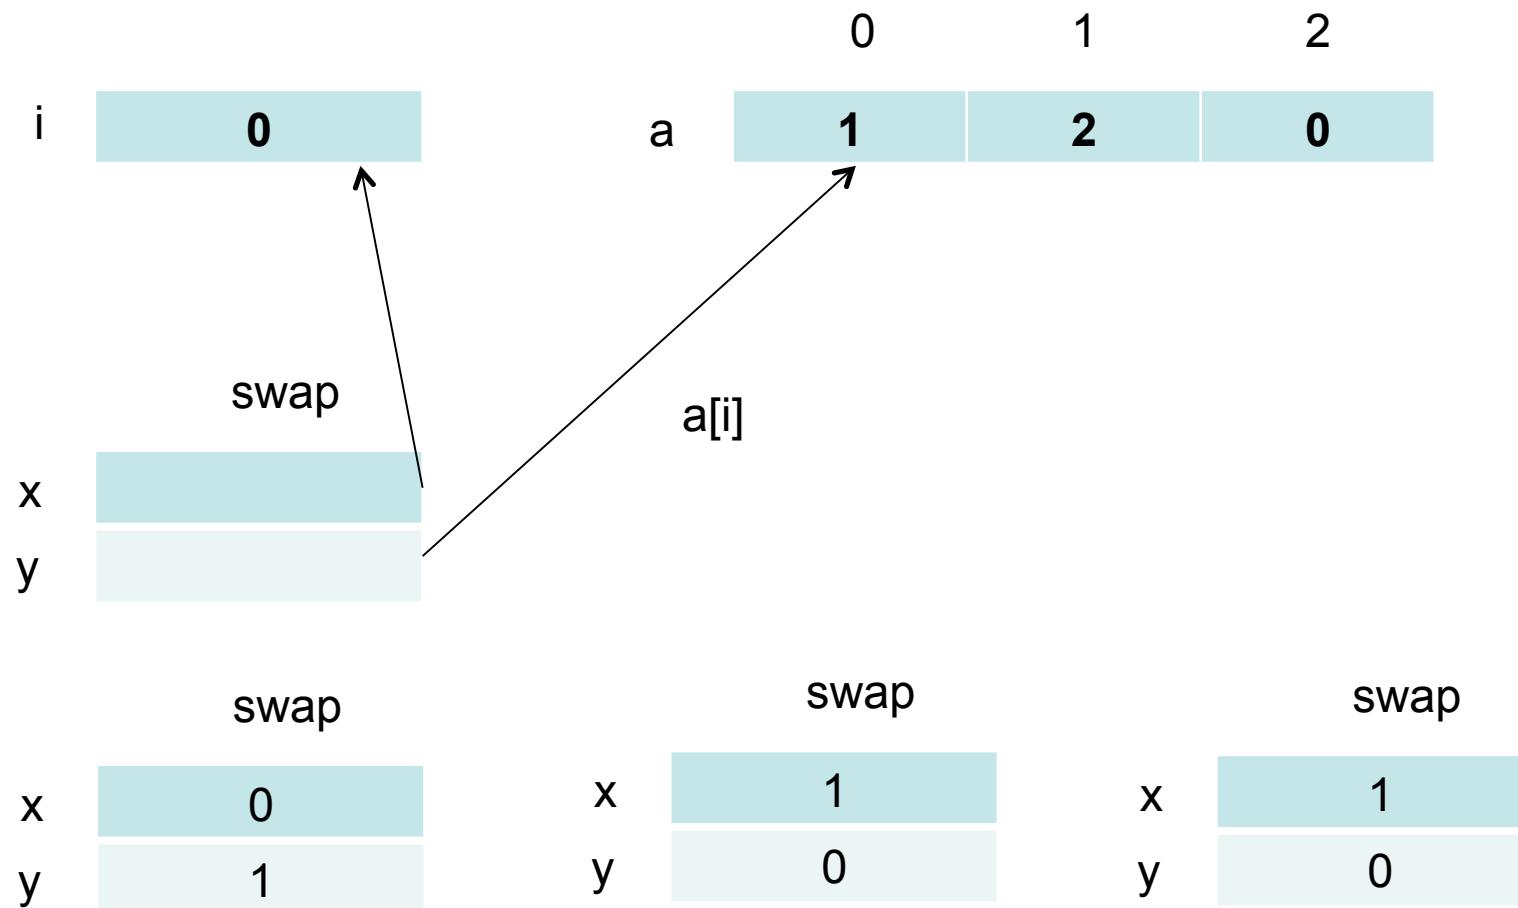

main()
{ int a[3] = {1,2,0};
  swap(i,a[i]);
  printf("%d %d %d %d\n",i,a[0],a[1],a[2]);
  return 0;
}
```

by value	by reference
0 1 2 0	1 0 2 0
by value-result	by name
1 0 2 0	2 1 -1 0
1 1 0 0	

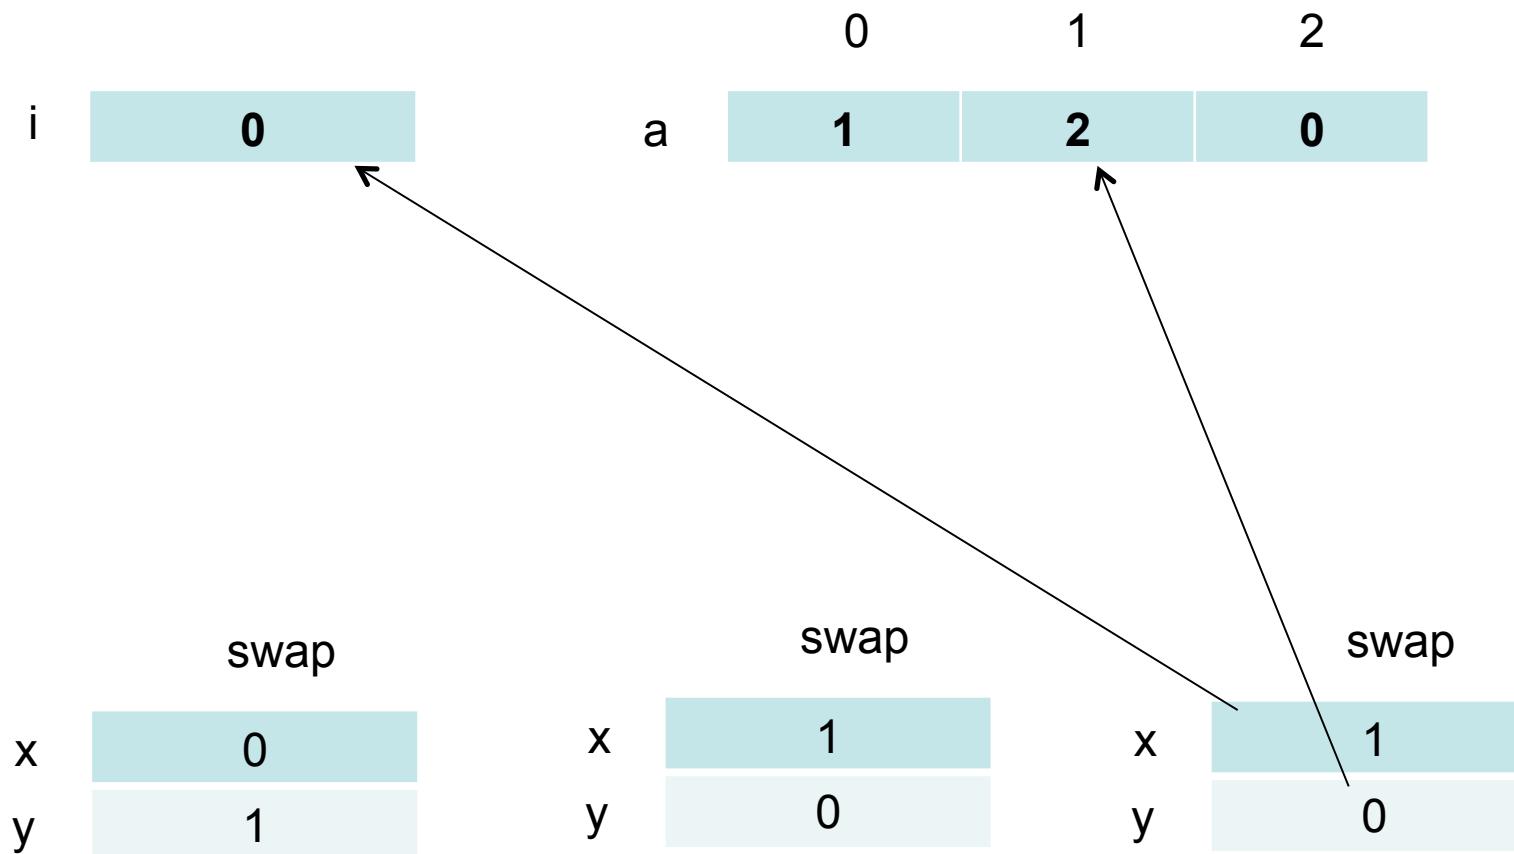

## 7.16 by reference

## 7.16 by value-result – address at call

## 7.16 by value-result – address at exit

## 7.16 by name

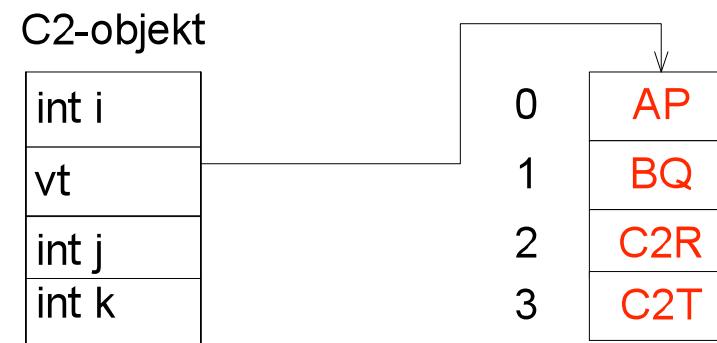

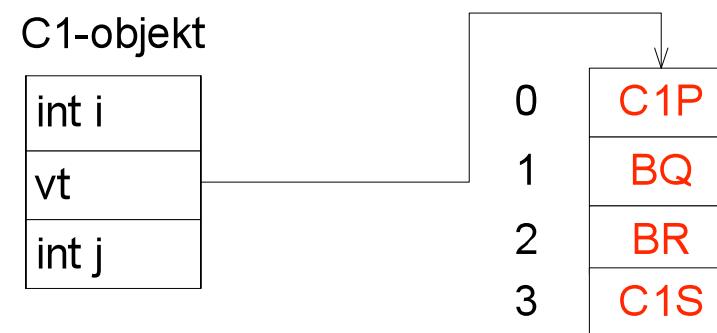

$$i = i + a(i) \quad == \quad i = 0 + 1 = 1$$

$$a(i) = i - a(i) \quad == \quad a(1) = 1 - a(1) \quad == \quad a(1) = 1 - 2 = -1$$

$$i = i - a(i) \quad == \quad i = 1 - a(1) \quad == \quad i = 1 - (-1) = 2$$

# Eksamens 2005

a)

# Eksamен 2005

b)

Vi finner nå på å innføre i språket muligheten for å spesifisere en metode til å være **final**. Det skal bety at den ikke lenger er virtuell, dvs at den ikke kan redefineres i subklasser.

Anta at vi i klassen B spesifiserer metoden Q til å være **final**.

Må vi da endre på virtuell-tabellen for B-objekter?

Begrund svaret.

NEI, virtuelle metoder i B-objekter kan fremdeles kaldes via A-typede pekere.

# Eksamens 2005

c)

```
instanceOf = false;
cd= <refExpr>.cl;
while not(cd= klassedeskriptor for klassen Object) do
    { if cd= klassedeskriptor for klassen <class>
        then instanceOf= true;
        cd= cd.cl
    }
```

# Eksamensoppgave 2005

d)

Generell test:

- Sjekk at `<class>.subklassenivå` ligger innenfor grensene på den aktuelle supers-tabellen
- `<refExpr>.vt.cl.supers[<class>.subklassenivå] = <class>`

Konkrete tester:

<code>rc11.vt.cl.supers(3) = C1</code>	dvs	<code>C1 = C1</code>	dvs	<code>true</code>
<code>rc11.vt.cl.supers(3) = C2</code>	dvs	<code>C1 = C2</code>	dvs	<code>false</code>

# Eksamensoppgave 2005

d) Supers for C11 og C21

0	Object
1	A
2	B
3	C1
4	C11

0	Object
1	A
2	B
3	C2
4	C21
