

INF 5181 Process Improvement and Agile Methods in Systems Development

Project Presentation

Nina Gu

06.10.2011

Context of the project

- ✓ Improve the current proprietary software system used at the company I'm working for. They are specialized in measuring ROMI and monitor campaign performance.
- ✓ The system is created in-house by one programmer and one system architect in 2007.

Issues

- ✓ The system consists of several “modules” and “hidden” links which you can only access if you have the specific address.
- ✓ Certain “areas” of the system is not user friendly; e.g navigation is time consuming (labyrinth).
- ✓ Certain functions in the system takes too long to load (2-3 min per action)
- ✓

(More issues will be described in the final report)

Goals

- ✓ Create a more agile transition between the modules
- ✓ More consistency in the system
- ✓ Easier navigation – user interface

This is a clever system that the customer really likes, so both the organization and the customer would benefit from a more improved system.
