# Presentation

Project INF 5180

Jean-Baptiste Lainé

jbaptiste.laine@gmail.com

# Context

- Student project

- Team: 5 students

- Mentor: validate the specifications and evaluate the work

- Time line:
  - Planning: One semester
  - Execution: 4 weeks

- My subject: Android/iPhone application

# Challenge/issues

- Very short time available: 4 weeks

- Every year: few projects achieve their goals

- Do as much work as possible in a short amount of time

# Method

- Use every resource available at the time

- Coordinate the team: everyone has equal work to do

- Reduce dependencies between the tasks

- Clever separation of the work

- Work on the UML

# Goals

- Compare the project success/failure with equivalent projects from previous years

- Appreciation from the mentor and the school:
  - Quality of the code, specifications, documentation and other deliverables
  - Correctors: the same people evaluate similar projects
  - The final grade is a good "extern" indicator
