

Standards and actor-network theory (ANT)

Eric Monteiro

NTNU and Univ. of Oslo

IN-IS autumn 2003

Contents

- **Standard: background, role, motivation**
 - Why bother ?
 - IS and standards...?
- **ANT: key ideas and concepts**
 - Grasping the dynamics of standards processes

AC vs. DC

AC vs. DC

“Do you want those deadly currents in your home?”

Standards: a typology

Quality

- "max. level of salt in mineral water is ..."
- **Compatability standards**
 - Deals only with the interface

Standards are everywhere!

- **Technology ...**
- **Routines**
- **Protocols, languages**
- **Agreements**
- **Formats**
- **...**

Ex.: a method in systems design

Standards: typology

- **Formal (by standardization bodies)**
- **De jure (imposed by law)**
- **De facto**

Actors

ISO

CEN TC 251

UN

IETF

W3C

IEEE

The logic of compatibility standards

versus

$O(n)$

vs.

$O(n^2)$

Arguments

- **Economics**
- **Division of labour**
- **Flexibility**

Arguments

- **Economics**
- **Division of labour**
- **Flexibility**

Key assumption

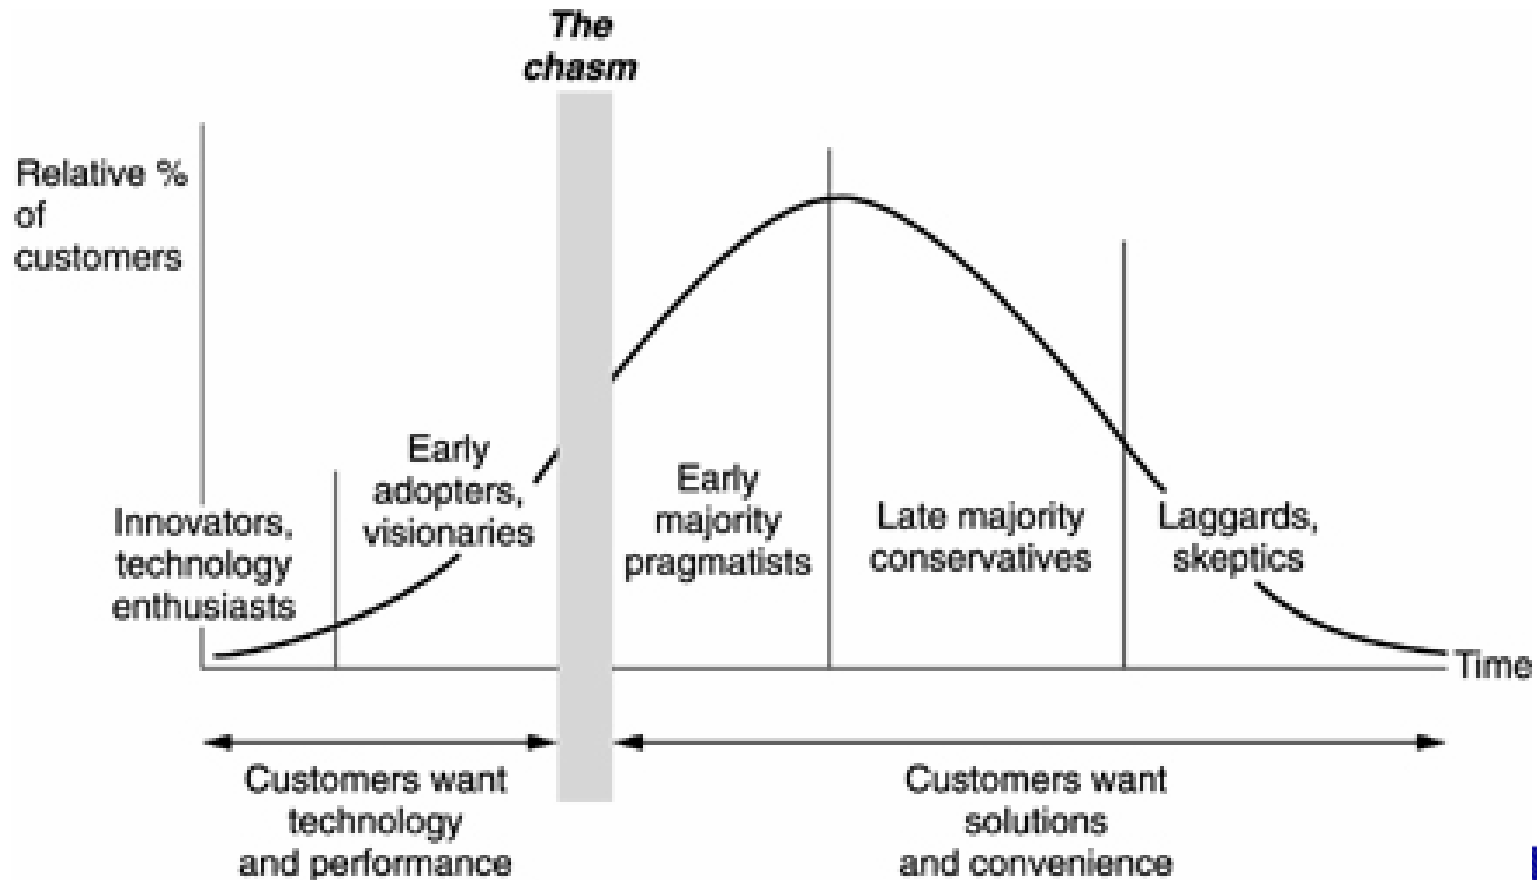

- **Idealization**
 - -abstraction
- **IF modules THEN bliss**

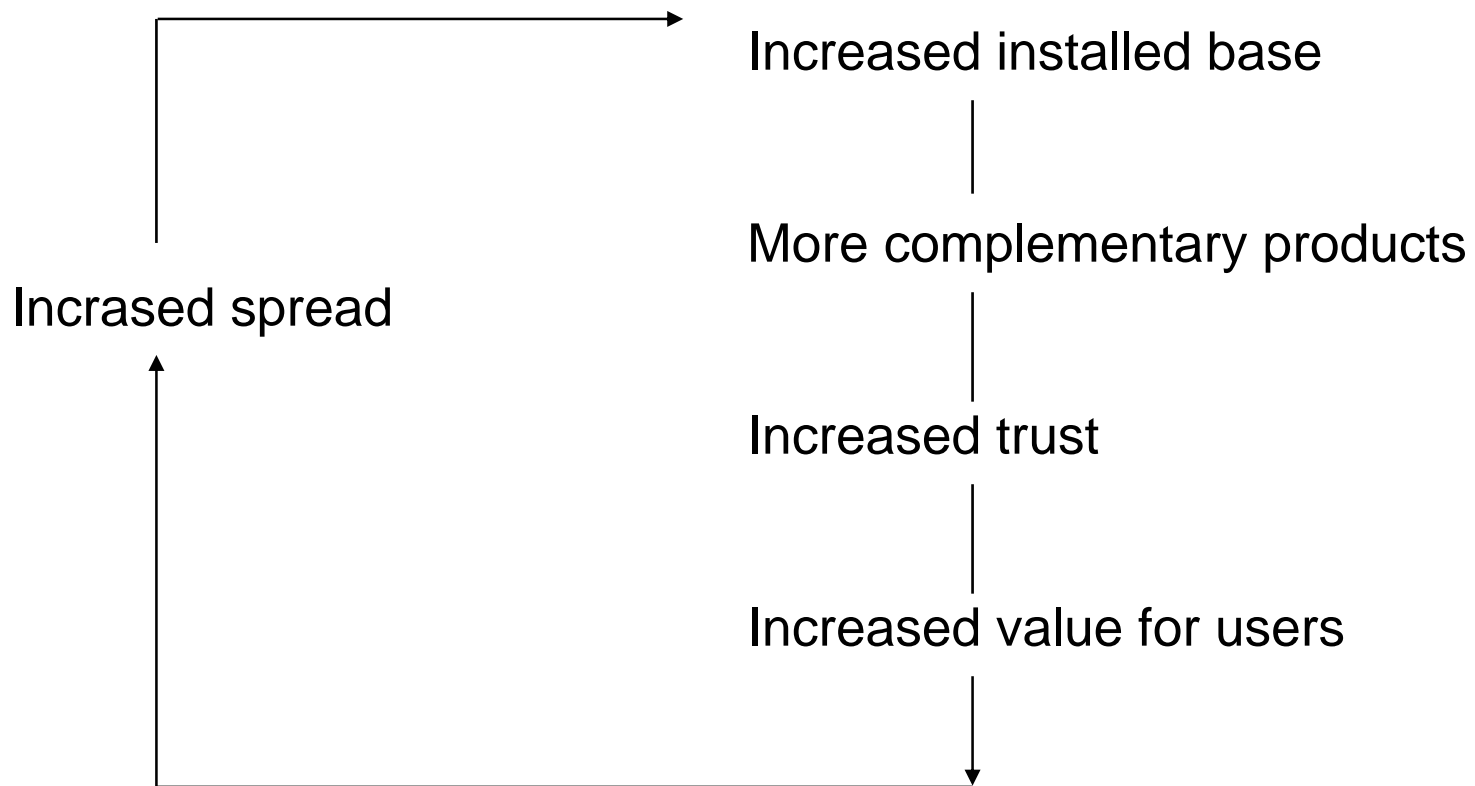

Modularization,
encapsulation,...

Life cycle diffusion, traditional

Grindley's model for innovation (1)

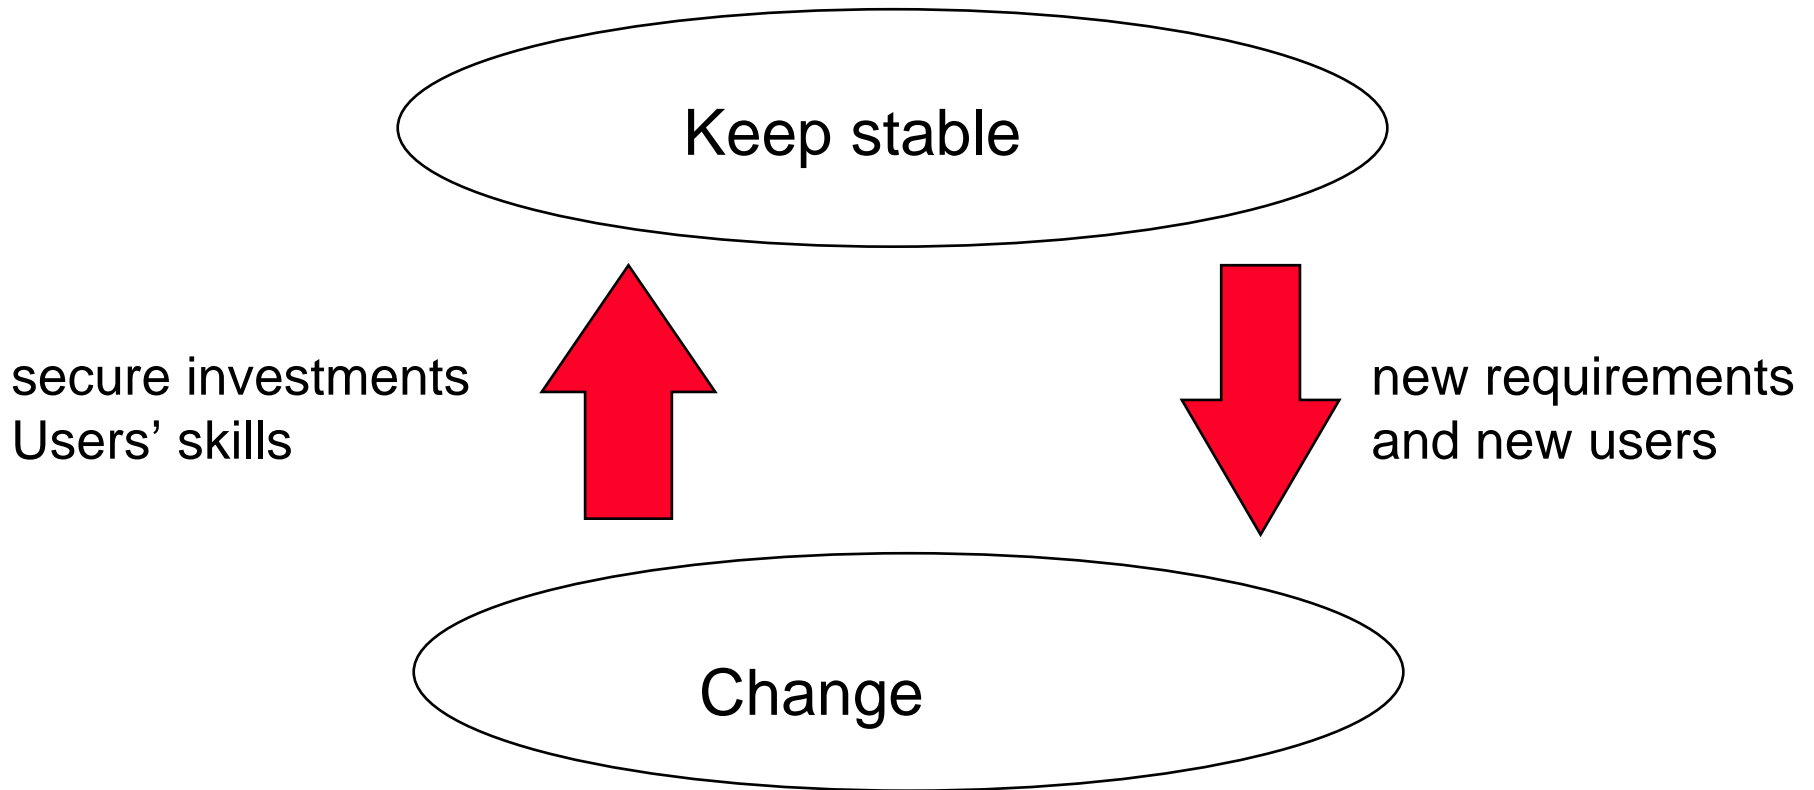

The video player

- **Betamax**
 - Sony first mover
 - Sony's name and reputation
 - Proprietary
- **VHS**
 - JVC – small, competence primarily on audio
 - 'open' standards
 - persuading Philips

“Changing a Jumbojet - in the air”

Stability and dynamics

Ex.: Electronic Patient Records

- **RIS**
- **PAS**
- **Lab**
- **Nomenclature (SNOWMED)**
- **Hospital – health region – nation – Europe**
- **CEN TC 251**

Products vs. services

- **Standardized products**
 - Mass production, fordism
- **Services**
 - Flexible specialization

”Quality”

”[U]niformity of output, a major goal of routinization, seems to be a poor strategy for maintaining quality... since customers often perceive rigid uniformity as incompatible with quality”

(Leidner, 1993)

History of ideas (at a glance)

- **Philosophy of science**
 - T. Kuhn
 - sociology of science
 - sociology of technology
 - Science and technology studies (STS)
- **Labour process**
 - H. Braverman, D. Noble
 - Sociology of work

Main variants of STS

- **Technological systems (T. Hughes)**
 - socio-technical web, momentum
- **Social construction of technology (Bijker, Woolgar)**
 - interpretative flexibility, symmetries, stabilisation
- **Cultural studies (R. Silverstone, KH Sørensen)**
 - domestication, appropriation, consumption, taming

- **Actor-network theory**

What kind of animal is ANT?

- **Alternatives exist**
 - Giddens, ethnografy, grounded theory, activity theory,...
- **A theory?**
- **A methodology?**
- **A perspective?**
- **A vocabular!**

Basic moves

- **Our world is full of technology**
- **The end, not the means**
- **Same role => same explanation**
- **Reductionist? Vulgar? Anti-humanistic?**

Appropriating ANT

- **Social science => ICT**
 - A GENUINE interest in the technology
- **Backward gazing => design**
 - Only after the dust has settled...
- **Details => basic notions**
 - Unstable, keeps changing

Inscribing behaviour

<<Leave the key!>>

Leave the key

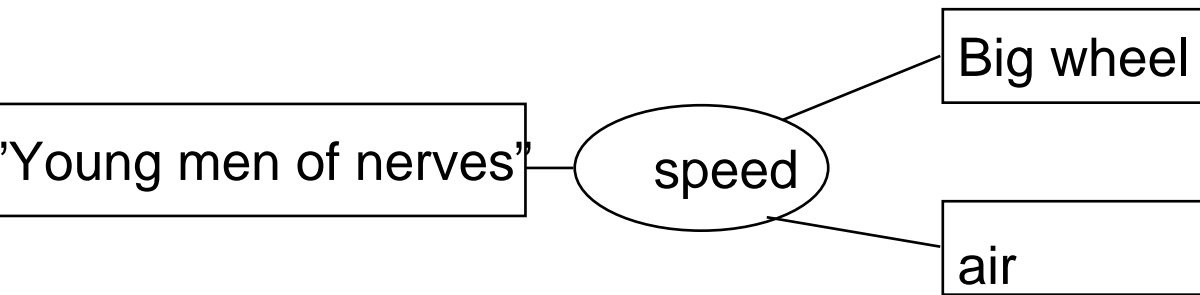

Inscriptions

- **WHO** inscribes
- **WHAT** is inscribed (which scenario)
- **HOW** is it inscribed (the material)
- **STRENGTH** of an inscription - does it succeed?

Stabilization

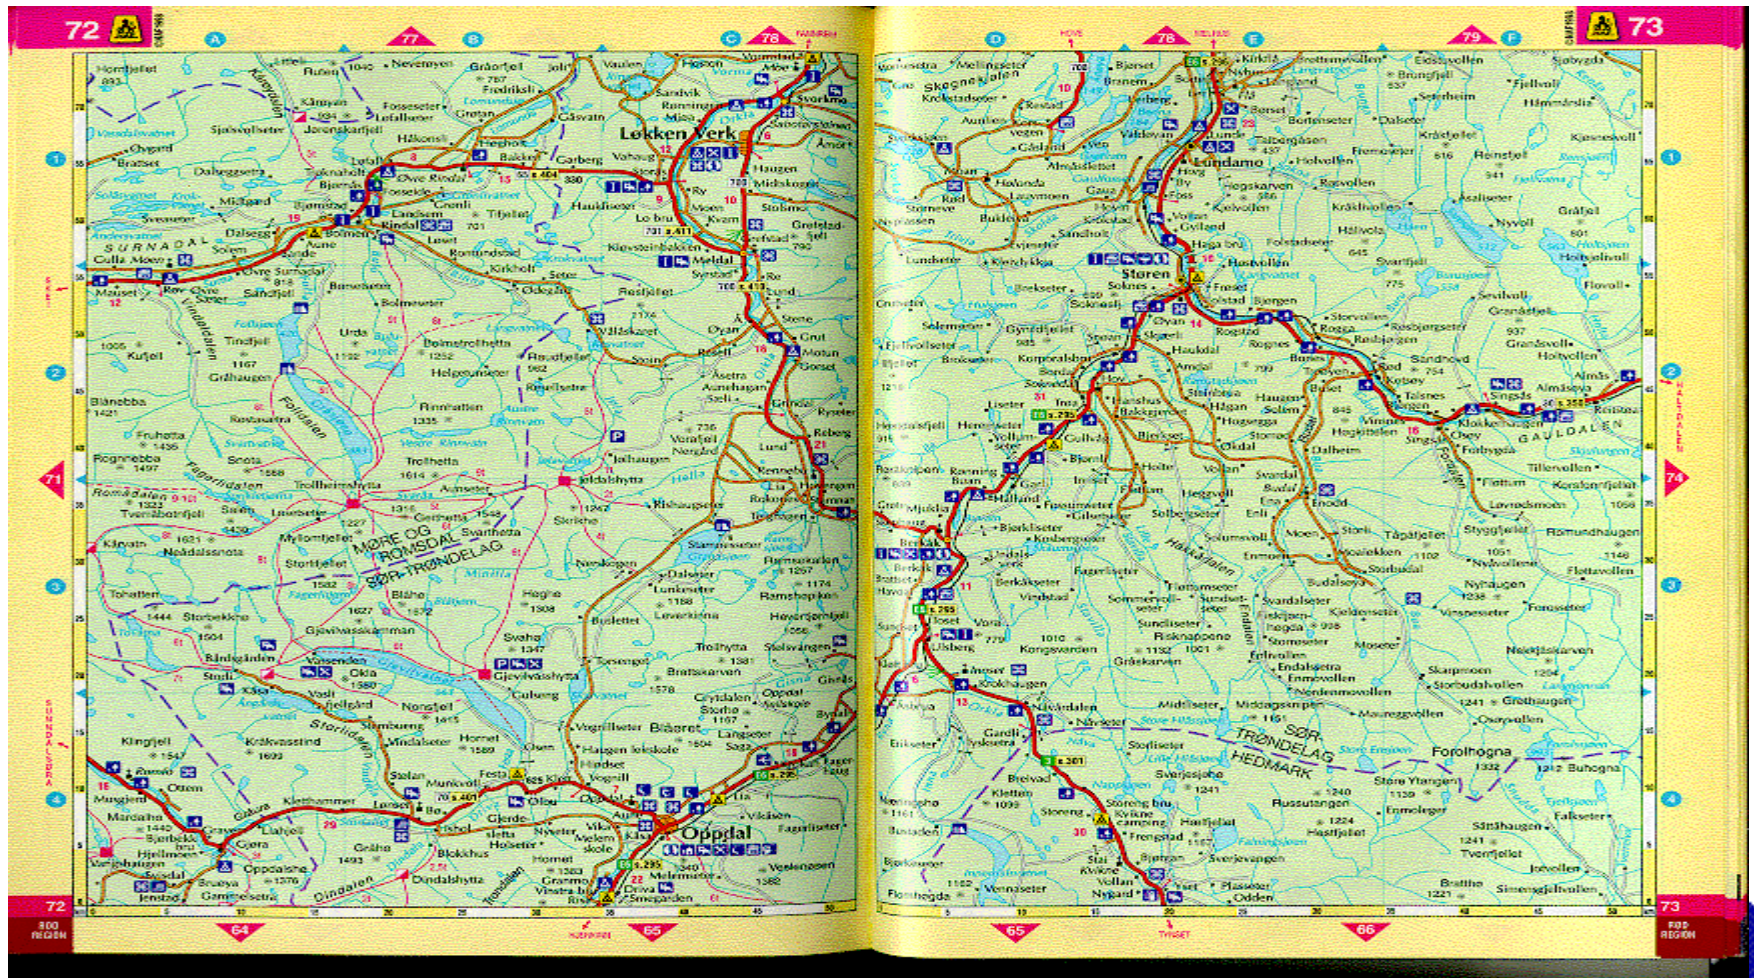

Interpreting information systems

- **Making the context concrete, specific**
- **Interpration through translations over time**
- **The interdependencies**

Context (I)

Context (II)

	M	Tue	W	Th	F
8 - 9					
9 - 10	■				
10 - 11	■		■		
11 - 12			■		
12 - 13			■		

Irreversibility

- **Irreversibilitet - measuring how well-aligned the actor-network is**
 - How difficult it is to undo an earlier inscription
 - To what extent future action is determined

QWERTY

Q W E R T Y U I O P Å
A S D F G H J K L Ø Æ
Z X C V B N M

Ex.: Microsoft

- **One application vs. a suite of applications**
- **OS vs. application**
- **Habits, customs**
- **Future updates**

Problem areas

- **”Actant”**
- **Only micro studies**
- **”Flat” actors**
- **Centered, drifting**
- **A grand theory of everything**
- **Design = intervention, not from scratch**

Actant

- **Just a fake? A play with words?**
- **Who interpretes the actants?**
- **Reasonable interpretations**
- **Unsolvable problem!**

Only micro?

- **what about larger structures**
- **Institutions?**
- **”move up and down!” (Callon, Latour 1986)**

Flat actors

- **Goal directed**
- **Machiavelli**
- **No soul**
- **Symbolic aspects**

Centered

- **Goal oriented**
- **Managerialism**
- **No drifting**
- **A mastermind, an origo**

Grand theory of everything

- **what is NOT an actor-network?**
 - None talks about boundaries - do they exist?
- **The neverending networks**
 - The world in your lap
 - How to delimit them
 - Methodological issues
- **”There is never only one network” (Leigh Star)**

Design

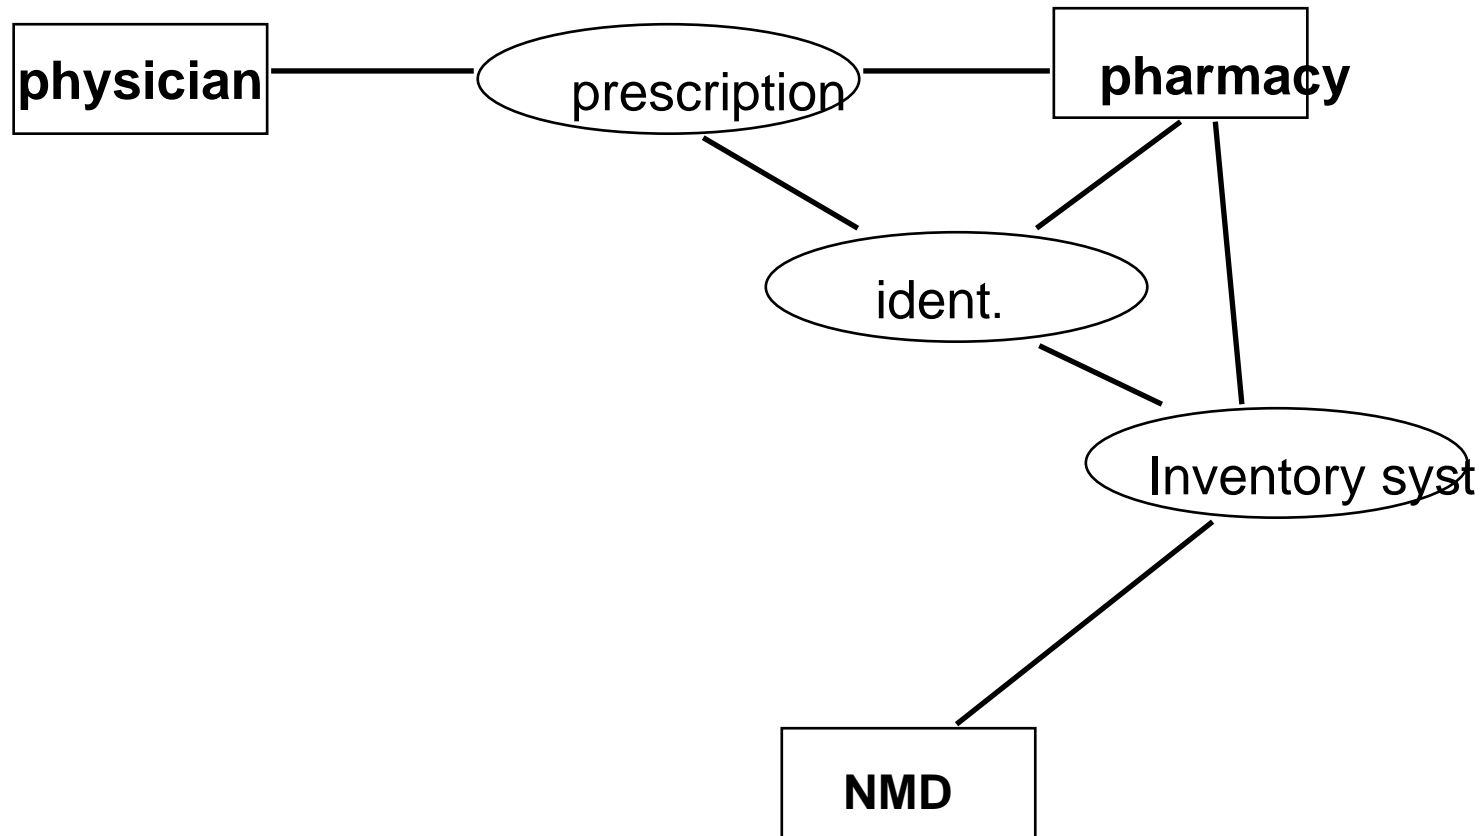

- **Till now - networks from scratch**
- **Infrastructure**
- **Gradual change of networks**
- **Polyvalent networks**

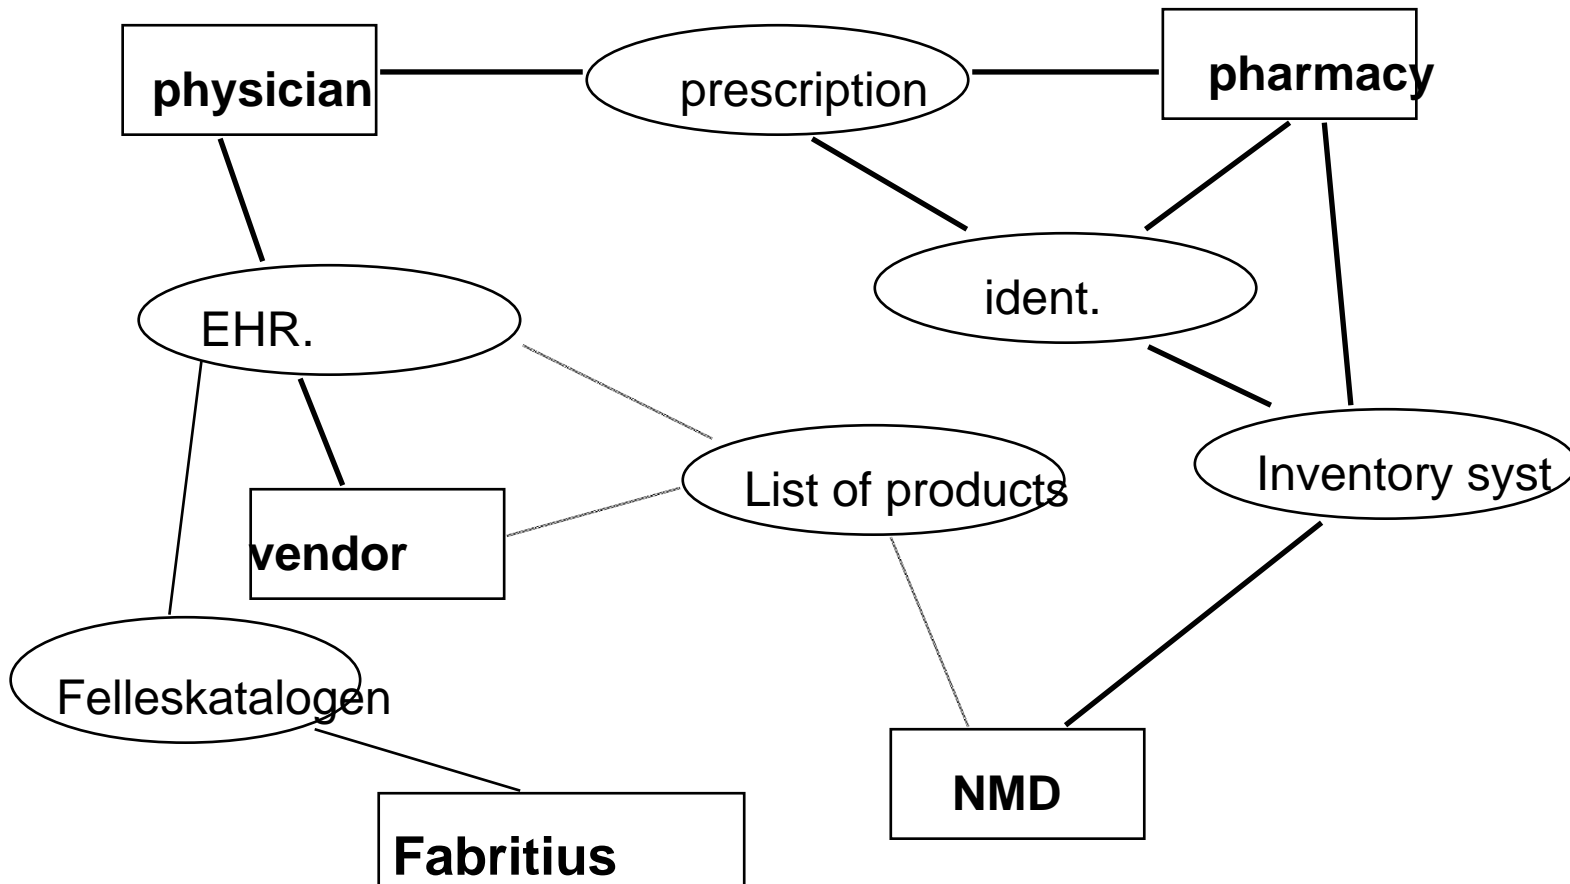

Prescription

Prescription

Prescription

Purity and danger

- **strong, rhetorical device!**
- **socially constructed (M Douglas)**
- **danger = impurity = fragmentation**
- **”Infrastructures are clean - tidy, uniform”**

Fragmentation = dirt

“[W]e risk that the company’s information and access get fragmented (...) The Intranet market is highly fragmented today, with a number of strong competitors fighting each other with technological as well as political means. (...) For the non-specialist, this creates the impression that Intranet technology is cheap, but it is of key importance to recognise that the Intranet technology of today has its price — they require an effort to be integrated with the existing infrastructure of the company”
(SData K/RD21, IT challenges and trends 1996 - 1999)

BRA: SAP in Statoil

- **Largest in Northern Europe**
- **”main effect: new work routines”**
- **1,3 billion NOK**
- **1996 - 2001**

The espoused version

“SAP R/3 overcomes the limitations of traditional hierarchical and function-oriented structures like no other software.

[All the functions] are integrated into a workflow of business events and processes across departments and functional areas”

(www.sap.com)

Cont'ed

- **Decentralization - decisions locally**
- **young & enthusiastic vs. old & established**

”I quit when BRA got 6 levels in its hierarchy”

Nauticus: DnV

- **Survey support system**
- **300 ports , 100 countries**
- **NEEDs to be equal - "Quality"**
- **checklists: management vs. surveyors**
