Figure: [Downing, 1977]

Background: Three Tasks

Three NLP tasks related to noun compounds [Lauer and Dras, 1994]

- Detection or identification of noun compounds
- Syntactic analysis of the internal structure, i.e. left vs. right bracketing of compounds with more than two constituents
- Interpretation of the semantic relation holding between the constituents of the compound

< 回 > < 三 > < 三 >

Two Main Approaches

Two main approaches to semantic interpretation of nominal compounds:

 Taxonomy-based [Girju et al., 2005, Tratz and Hovy, 2010, Ó Séaghdha and Copestake, 2013]

• Paraphrase-based [Nakov, 2013]

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Can we predict the compound semantic relations using the vector arithmetic typically used to solve word analogy tasks?

King is to queen as man is to ?

3COSADD:
$$\underset{b^* \in V}{\operatorname{arg\,max}}(cos(b^*, b - a + a^*))$$

PAIRDIRECTION: $\underset{b^* \in V}{\operatorname{arg max}}(cos(b^* - b, a^* - a))$

[Levy and Goldberg, 2014] report that [Mikolov et al., 2013] used 3COSADD to solve the syntactic analogies task and PAIRDIRECTION to solve the semantic one.

[Levy and Goldberg, 2014] report that [Mikolov et al., 2013] used 3COSADD to solve the syntactic analogies task and PAIRDIRECTION to solve the semantic one.

Vector Arithmetic for Nominal Compounds

Given a test compound b, b^*

3COSADD: $\underset{a,a^* \in C}{\operatorname{arg\,max}} (cos(b^*, b - a + a^*))$

PAIRDIRECTION: $\underset{a,a^* \in C}{\operatorname{arg max}} (cos(b^* - b, a^* - a))$

C is the set training compounds Return the *relation* of the most similar compound
