The diagram illustrates a risk analysis for health records. It starts with a stakeholder 'Employee' (represented by a person icon with a warning triangle) who is vulnerable to three types of threats: 'Insufficient training', 'Prose-based health records', and 'Possibility of irregular handling of health records'. These threats lead to two incidents: 'Sloppy handling of records' and 'Health record leakage'. These incidents then lead to two compromises: 'Compromise of confidentiality of health records' and 'Compromise of integrity of health records'. Finally, these compromises result in the loss of 'Health records' (represented by a money bag icon).
