Statistics				
Organizational theory				
Worked in IT industry				

Survey II

A) Imagine that you've completed this course and are satisfied with it. Take a few moments to put yourself in this situation and feeling. Then answer the following questions:

- In what/How was the course successful?
- What was your contribution, what were other students' contributions and what was the lecturer's contribution?

(This technique – "future perfect thinking" – is used, among others, by athletes and is a possible technique both within system development and process improvement.)

B) How do you prefer to give feedback on course structure, content, and quality of teaching?

- Online-feedback form? / once or twice? / other?
