

Solutions to exercises from Lecture 13 Arguing

TEK5010 Multiagent systems 2020

Question 1

a) Give an example of a rationally justifiable position.

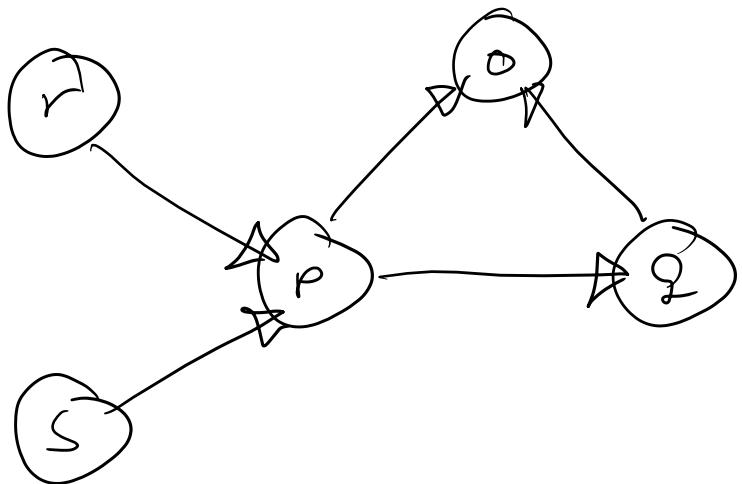

This is a Dung-style argumentation system:

- 1 Nodes are arguments
- 2 Arrows are relations between arguments,
arrow from A to B means A attacks B

A rationally justifiable position is typically

- 1) Conflict free
- 2) Mutually defensive
- 3) Admissible set
- 4) Preferred extensions
- 5) Grounded extensions

* Conflict free: A position S is conflict free if no member of S attacks any other member of S .

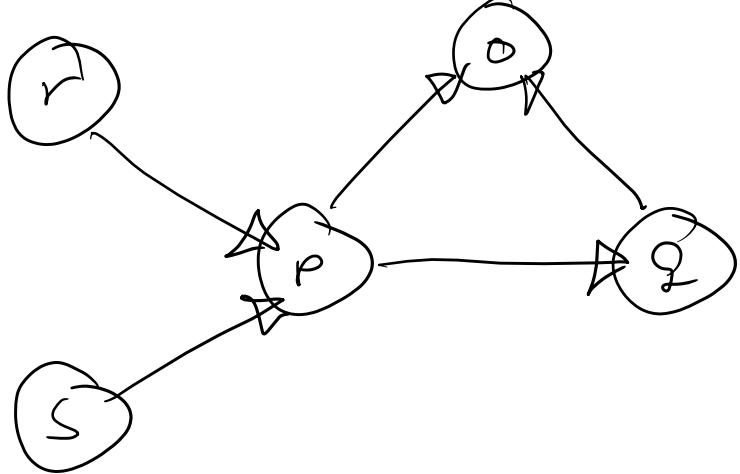

r, s, p, q, o

rq, ro, rs

sq, so

$rsq, rs o$

* Mutually defensive: A position S is mutually defensive if every element of S that is attacked is defended by some element of S .

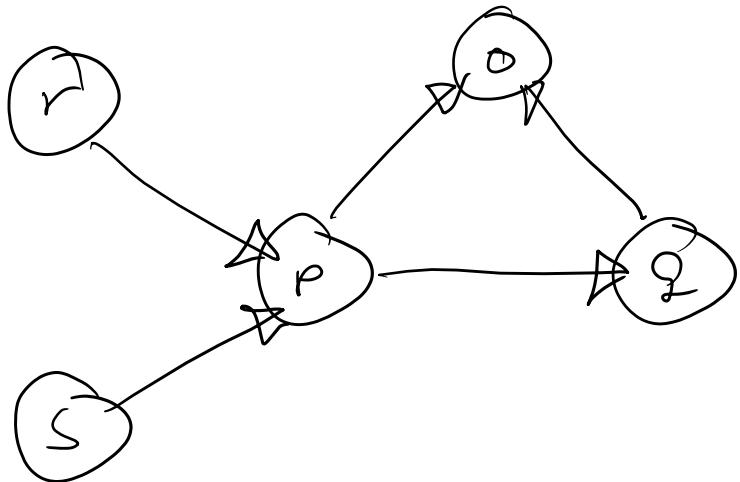

r, s

rq, rs

sq

rsg

* Admissible set : A position S that is conflict free and mutually defensive is an admissible set and internally consistent.

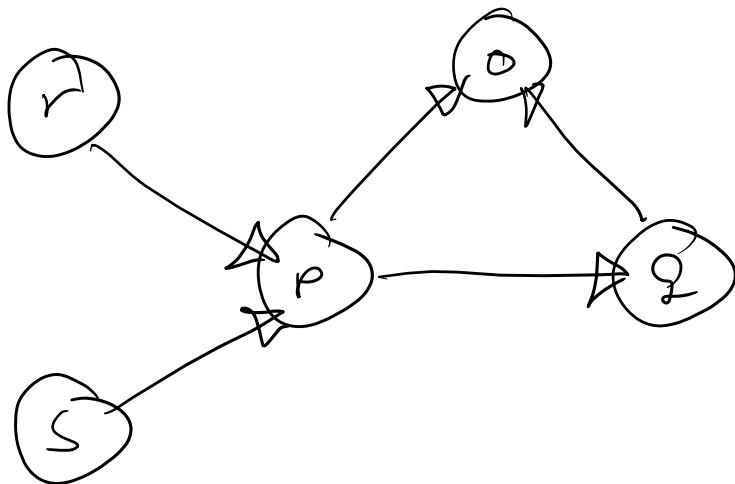

r, s

rq, rs

sq

rsg

* Preferred extensions: S is admissible but every superset of S is inadmissible

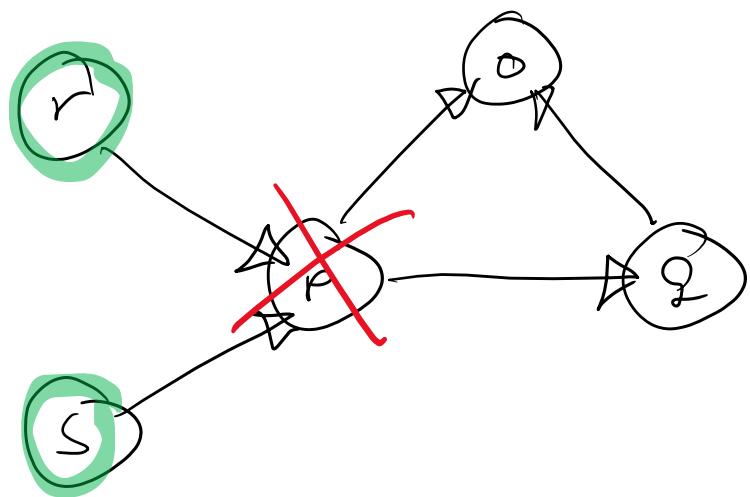

~~r~~, ~~s~~

~~rq~~, ~~rs~~

~~sp~~

rsq is the preferred extension

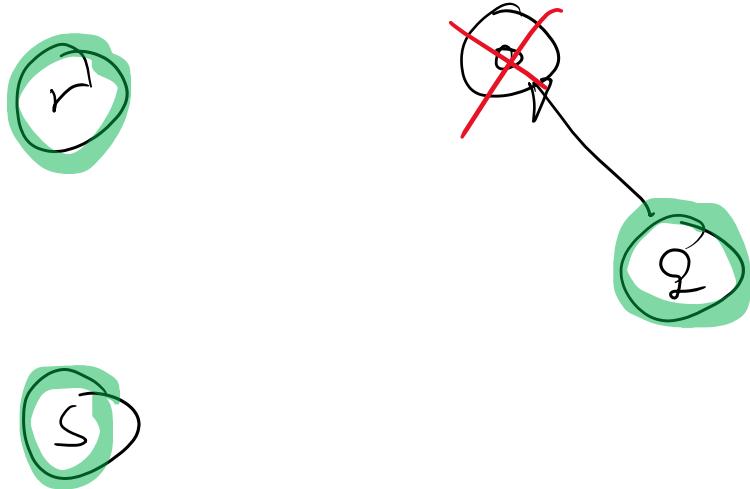

* Grounded extensions:

in: r, s, p

out: q

* Ground extensions:

in: r, s, g

out: p, o

* Ground extensions:

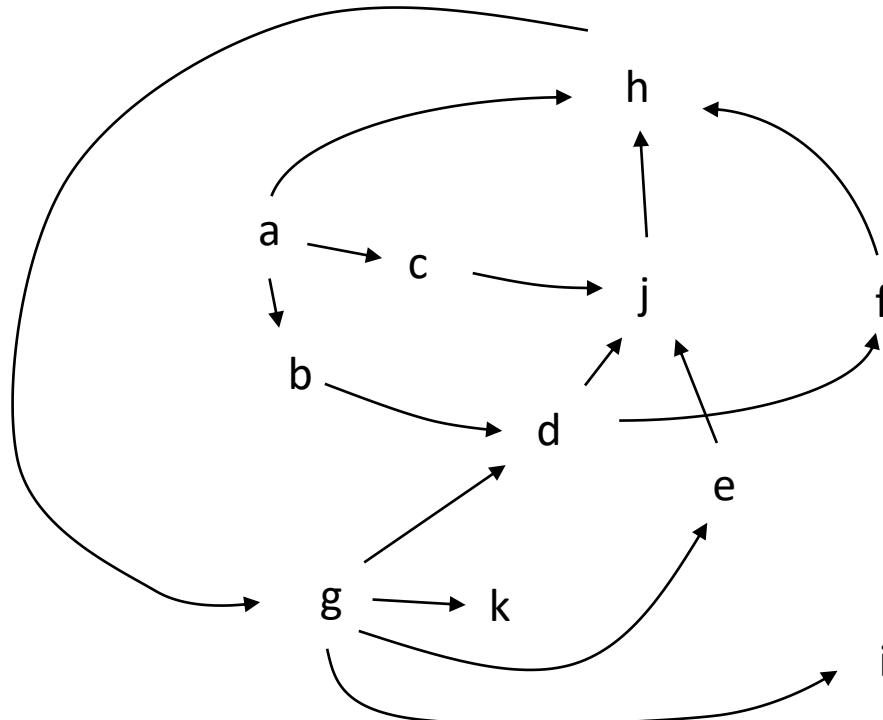

in: r, s, q

out: p, o

Question 2

a) Calculate the
grounded extensions

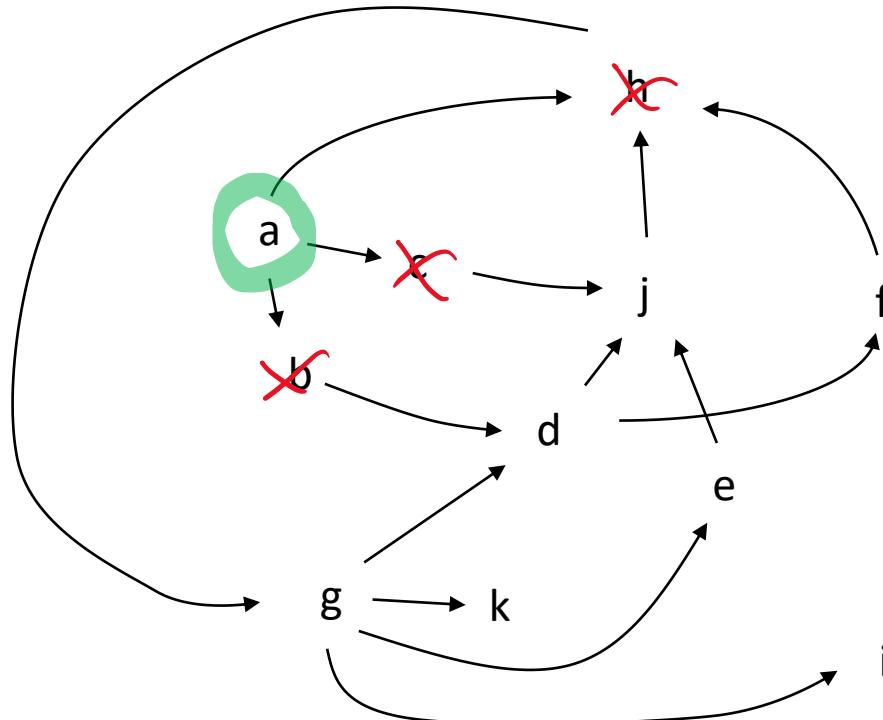

Question 2

a) Calculate the grounded extensions

in : a

out : b, c, h

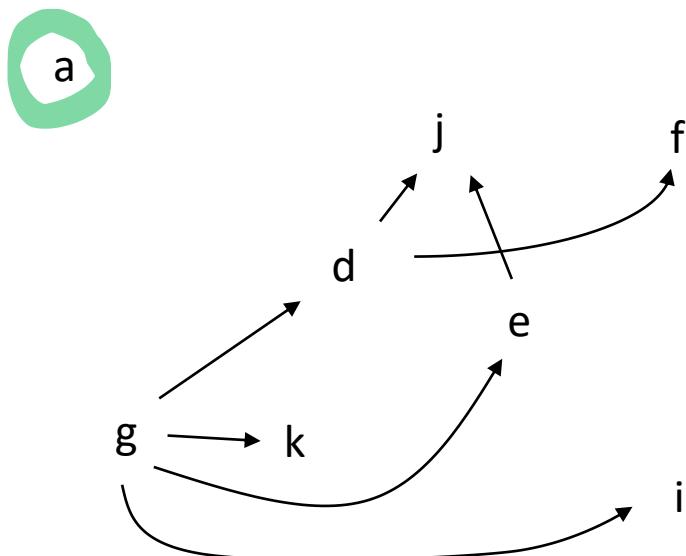

Question 2

a) Calculate the
grounded extensions

in : a

out : b, c, h

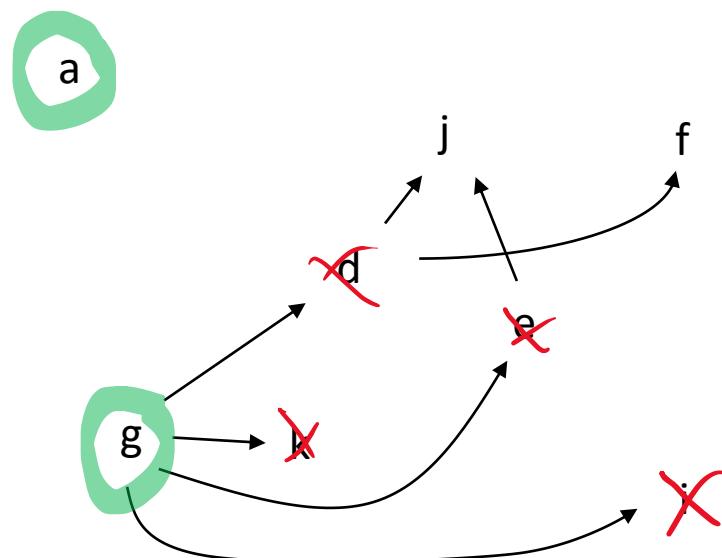

Question 2

a) Calculate the grounded extensions

in : a, g

out : b, c, h, d, e, k, i

Question 2

a) Calculate the
grounded extensions

in : a, g

out : b, c, h, d, e, k, i

j

f

Question 2

a) Calculate the
grounded extensions

in: a, g, i, f

out: b, c, h, d, e, k, i
