

Topology Course Evaluation UiO autom 2018:

What people think we should continue doing or do more of:

Many feel that they benefit from drawings and or illustrations to give a picture of concepts.

Some like examples and explanations on how topology relates and connects to other parts of math.

Some like that we get served theorems, then proofs.

What people would change:

Quite some think the course is too fast.

Some don't like that we sometimes go above our allotted time, into the break time.

Some think tangents into other parts of math go a bit quick.

Some think the summary of the previous lecture is a bit short.

Some would like more explanation of the notation

What people have benefitted from:

Quite some have benefited from the notes on the course page about what we will be taught each lecture.

Some benefited from the exercises not being too difficult.

People feel they have learned a lot about open sets, functions, and how some results of real analysis is a special case of topology.

What people want to see different:

Some want discussions, group/work-lectures, test exams, and that the exercises are not as old when they are given, and some want the plenums-teacher to explain more and wipe the boards better.
