UiO : University of Oslo

Olena Tymoshenko

Tentative Syllabus STK-MAT3700/4700

Content	

1.	**Introduction.**
	1.1 Basic concepts of financial markets.
	1.2 Motivational examples for the use of derivatives.
2	**Models of changes in the value of money.**
	2.1 Interest rates. Simple interest rates. Present value of a single future payment. Discount factors.
	2.2 Effective and nominal interest rates. Real and money interest rates. Compound interest rates.
	2.3 Compound interest functions. Annuities and perpetuities.
	2.4 Net present value of a sequence of cash flows. Equation of value. Internal rate of return. Examples of cash flow patterns and their present values.
3	**The main types of financial assets**
	3.1 Risk-free financial assets
	3.1.1 Zero-Coupon Bonds, Coupon Bonds
	3.1.2 Money market account.
	3.2 Risk financial assets
	3.2.1 Dynamics of Stock Prices
	3.2.2 Binomial Tree Model
	3.4 Forwards contracts (Forward price. Value of a forward contract).
	3.5 Futures (Pricing. Hedging with Futures)
	3.6 Options.
	3.6.1 Put-call parity
	3.6.2 Bounds on option prices.
	3.6.3 Variables determining option prices
	3.6.4 Time value of options.
	3.6.5 Hedging and speculating with options
	3.6.5.1 Bullish strategies
	3.6.5.2 Bearish strategies
	3.6.5.3 Neutral or non-directional strategies
4	**Single Period Securities Markets**
	4.1 Model specifications.
	4.2 Arbitrage and other economic considerations.

	4.3 Linear programming.	
	4.4 Risk neutral probability measures.	
	4.5 Valuation of contingent claims.	
	4.6 Complete and incomplete markets.	
5.	**Portfolio optimization in single period markets**	
	5.1 Optimal portfolios and viability.	
	5.2 Risk neutral computational approach.	
6.	**Review of probability**	
	6.1 Information and measurability	
	6.2 Conditional expectation.	
7.	**Multiperiod Securities Markets**	
	7.1 Model specifications	
	7.2 Economic considerations.	
	7.3 Risk neutral pricing	
	7.4 Complete and incomplete markets	
	7.5 Optimal portfolio problem	
8.	**The Cox-Ross-Rubinstein model.**	
	8.1 Introduction.	
	8.2 Bernoulli processes and related processes	
	8.3 The Cox-Ross-Rubinstein model	
	8.4 Pricing European options in the CRR model.	
	8.5 Hedging European options in the CRR model	
9.	**The Black-Scholes model**	
	9.1 Introduction.	
	9.2 Brownian motion and related processes	
	9.3 The Black-Scholes model.	
	9.4 The Black-Scholes pricing formula	
	9.5 Convergence of the CRR pricing formula to the Black-Scholes pricing formula	

BASE

1. M. Capinski, T. Zastawniak, Mathematics for Finance, An Introduction to Financial Engineering.// Capinski M. – London: Springer Verlag, 2011. – 322 p.
2. J. Hull, Options, Futures, and Other Derivatives (9th Edition) . – Pearson Education, 2015. – 869 p.
3. Roman S. Introduction to the Mathematics of Finance // Roman S. – New York: Springer Verlag, 2004. – 354 c.
4. Pliska S. Introduction to Mathematical Finance. Discrete Models. // Pliska S. – Oxford: Blackwell Publishers Ltd. , 1997. – 272 p.
