

Oppgaverregning STK 1000 15/9-2017

1.73, side 51

min, Q_1 , med, Q_3 , max
 0 0 5.1 9.42 73.20

Svart skjevfordelte data med flere ekstremverdier.
 Kan ikke bruke \bar{x} og SD her.

1.122 side 74

a) Hvorfor er Areal = 1

Det er en tetthetskurve

Total sannsynlighet for å ha en mellom 0 & 1 er 100%

b) Andel av obs under 0.34 $0.34 \cdot 1 = 0.34$ c) Andel av obs mellom 0.34 & 0.60:

$$(0.60 - 0.34) \cdot 1 = 0.26$$

1.128 $z \sim N(0,1)$

a) $z > 1.55$

Dette er det vi finner i table A T3

b) 0.9394

Mao det røde arealet = $1 - 0.9394 =$

$z < 0.55$

c) $z > -0.70$

Tabell T2
0.2420

Mao Det røde arealet = $1 - 0.2420 =$

d) $-0.70 < z < 1.55$

~~1~~ $0.9394 - 0.2420 =$

1.133 IQ : $X \sim N(100, 15)$ σ

MENSA: $X \geq 130$

Hvor stor andel av voksne kan (teoretisk) bli medlemmer

Regner om til z-score:

$$z = \frac{x - \mu}{\sigma} = \frac{130 - 100}{15} = \underline{2.0}$$

Table A, T3

$$1 - 0.9772 \approx \underline{\underline{2.28\%}}$$
