

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2
 - ARMA/ARIMA models, chapter 3

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2
 - ARMA/ARIMA models, chapter 3
 - Spectral analysis, chapter 4

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2
 - ARMA/ARIMA models, chapter 3
 - Spectral analysis, chapter 4
 - State space models, chapter 6

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Ananlysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2
 - ARMA/ARIMA models, chapter 3
 - Spectral analysis, chapter 4
 - State space models, chapter 6
 - Additional topics ?, chapter 5

Intoduction STK4060-sp18: Time Series Analysis

Aim of the course:

- Provide an introduction to the most common probabilistic models for time series and explain how they are estimated. With reference to the textbook **Time Series Analysis and Its Applications** by Robert Shumwayn and David Stoffer we consider
 - Regression models, chapter 2
 - ARMA/ARIMA models, chapter 3
 - Spectral analysis, chapter 4
 - State space models, chapter 6
 - Additional topics ?, chapter 5
- Demonstration how the statistical software package **R** can be used to analyze such series, in particular the package developed for the text, **astsa**

Today:

- Some examples of actual time series, $\{x_t\}$, $t = 1, \dots, n$

Today:

- Some examples of actual time series, $\{x_t\}, t = 1, \dots, n$
- Some examples of time series models,
 $\{X_t\}, t = 1, \dots, n, P_{\theta}(X_{i_1} \leq x_{i_1}, \dots, X_{i_k} \leq x_{i_k})$ $i_1 < \dots < i_k$

Today:

- Some examples of actual time series, $\{x_t\}, t = 1, \dots, n$
- Some examples of time series models,
 $\{X_t\}, t = 1, \dots, n, P_{\theta}(X_{i_1} \leq x_{i_1}, \dots, X_{i_k} \leq x_{i_k})$ $i_1 < \dots < i_k$
- Measuring autocorrelation/ cross correlation

Today:

- Measuring autocorrelation/ cross correlation
- Modelling correlation
- Estimating correlation

Modelling dependence is an important issue since observations collected in time in general exhibit correlation.

- In most situations we will consider there are no replications

Modelling dependence is an important issue since observations collected in time in general exhibit correlation.

- In most situations we will consider there are no replications
- When time series is collected at discrete points of continuous series it is important to use an appropriate sampling rate.

Modelling dependence is an important issue since observations collected in time in general exhibit correlation.

- Two basic approaches

Modelling dependence is an important issue since observations collected in time in general exhibit correlation.

- In most situations we will consider there are no replications
- When time series is collected at discrete points of continuous series it is important to use an appropriate sampling rate.
- Two basic approaches
 - In **time domain** analysis the dependence is explained in terms of past and present observations.

Modelling dependence is an important issue since observations collected in time in general exhibit correlation.

- In most situations we will consider there are no replications
- When time series is collected at discrete points of continuous series it is important to use an appropriate sampling rate.
- Two basic approaches
 - In **time domain** analysis the dependence is explained in terms of past and present observations.
 - In **frequency domain** analysis the focus is on discovering periodic and systematic variation. This is done by combining sinusoidal variation at different frequencies
