

Case meeting

Two students together present one patient, either from the pediatric emergency ward or a patient already admitted to one of the pediatric wards (Ahus, Ullevål or Rikshospitalet).

You must bring your patient record printed out, and hand in to the teacher responsible for the case meeting. Either each student has his/her own copy or you write both names on the same copy. **Remember to mark the patient record as “case meeting” and with your name and group.** If you forget, or by some reason are not able to hand in your record at the scheduled case meeting, you must let the teacher know, and you will find the best way for you to hand it in. If you put it together with other patient records in “inbox”, you must mark it with the **teacher’s name** as well.

Make a PowerPoint presentation or prepare the presentation in another way (whiteboard...) and present the case for your colleagues, first the patient (history, clinical findings, laboratory tests and diagnosis) and then general information about the relevant disease. It is NOT enough to just read the patient record out loud. You have **15 minutes for the presentation (the patient + the disease) and then there are 5 minutes for discussion.**

NOTE: Send the ppt presentation to your **UiO email**, for being able to open it at all computers at the hospital. Privat USB sticks are usually not accepted and many e-mail services are blocked at the hospital. You can also email the presentation to the teacher listed up for your session, latest the day before.

Check "My studies" to find when and where you have case meeting. You must find a patient and prepare the presentation in advance.

NOTE: All students must hand in 4 patient records. Three of these are to be done individually and handed in “in inbox” and the fourth presented at a case meeting and handed in to the case meeting teacher to read.
