

Welcome to the web-based course in gynecologic, pediatric, placental and testicular pathology!

The course consists of the following elements:

Lectures: The lectures will give you an overview of the pathology subjects and are valuable for the understanding of the gross and microscopic changes.

Gross pathology: The gross pathology ("Makro") will focus on examples of pediatric cases and gynecological pathology.

Microscopy course:

You find the microscopy part of the course as digitalized slides at https://studmed.uio.no/elaring/fag/patologi/kurs_m6/index.shtml

There are 6 different microscopy sessions covering a total of 40 cases within the above-mentioned areas. You will find handouts that guide you through each case on the web (timeplan).

Exam:

Both the oral (OSCE) and written exams will be based on cases from the microscopy course. You will not be examined in gross pathology.

Basic literature:

Robbins Basic Pathology, latest edition.

Remember: The teaching is supposed to be up to date. Thus, in the literature you will find the minimum.
