

## Case meeting

**Two students together** present one patient from the pediatric ward or the acute ward. If your case meeting is at Ahus the patient should be from there, otherwise from Ullevål or RH. You must bring your patient record printed out, and hand in to the teacher responsible for the case meeting. One copy each, or both names on one copy. Remember to mark the patient record as “case meeting” and with your name and group.

Make a PowerPoint presentation or prepare the presentation in another way (whiteboard or other...) and present the case for your colleagues, first the patient (history, clinical findings, lab. tests and diagnosis) and then general information about the relevant disease. You have **15 minutes for the presentation (of the patient and the disease) and then there are 5 minutes for discussion.**

**NOTE:** Send the ppt presentation to your **UiO email**, for being able to open it at all computers at the hospital. Privat USB sticks are usually not accepted and many e-mail services are blocked at the hospital. You can also email the presentation to the teacher listed up for your session, latest the day before.

Check "My studies" to find when and where you have case meeting. You must find a patient and prepare the presentation in advance. It is not enough to just read the patient record for the other students, this is supposed to be a presentation.
