Important

The restructuring of Oslo University Hospital which includes both the closing of hospital units and delocalization of patients, might present some challenges to the clinical teaching. Due to this, readjustments of the teaching plan may happen at short notice. The Faculty of Medicine will do its best to make this process as smooth as possible for the students.

However, 2011 may possibly present challenges which are out of the Faculty's control. The Faculty of Medicine therefore requests everyone to show flexibility and understanding of the situation in order to allow the new University Hospital structure to settle in its form. All changes regarding the clinical teaching will be posted on "My studies": It is therefore imperative that the students in the clinical semesters check their personal schedule ("*My studies*") for updates every weekday.

1. Introduction

Welcome to the 9th semester!

This booklet contains the relevant information with regard to lectures and all other teaching methods for the coming semester. There is also a list of the professors/lecturers and other teaching staff, together with an overview of the course schedules. Also outlined in this booklet is the academic content for the semester, learning objectives, and methods of instruction and evaluation.

This semester will be taught in English.

This is for a number of reasons, including:

- English is the international medical language and is therefore important for any doctor to master
- The 9th semester includes exchange students from foreign universities who have no previous knowledge of Norwegian

We hope you will have an interesting and fruitful semester.

2. Semester Committee

The semester is organized by a committee consisting of three professors, two medical students and a committee secretary:

Professor Kai-Håkon Carlsen, semester chairman
Professor Annetine Staff
Professor Niels Chr. Danbolt
Førsteamanuensis Cecilie Ahlfsen, AHUS
Student representative
Senior Executive Officer Eva Gretland, semester coordinator

2.2 Study information

Useful student information on the web

You will find useful information for all students in the University of Oslo (UiO) at:

<http://www.uio.no/english/>.

<http://www.med.uio.no/english/studies/>

Information specifically for medical students is found at:

<https://minestudier.uio.no>, <http://www.med.uio.no/english/studies/programmes/medicine/>.

Places of study: <http://www.med.uio.no/english/studies/programmes/places/>

Manage your studies: <http://www.med.uio.no/english/studies/admin/>

<http://www.med.uio.no/studier/admin/> (norwegian)

Regulations and Guidelines for the Program in Medicine:

<http://www.med.uio.no/english/studies/about/regulations/medicine/index.html>

Rules: <http://www.med.uio.no/studier/om/regelverk/profesjon-medisin/index.html> (norwegian)

Updated information about your semester can be found at:

<http://www.uio.no/studier/emner/medisin/med/MEDSEM9/h11/>

Student information

The Faculty's main information channel to students is via "My studies" The study administration demands that "My studies" every weekday.

Class Mailing List

The Class e-mail lists are monitored, which means that e-mails sent to the lists will be checked by a moderator before being sent to the recipients. The moderator function is operated by the Student Information Centre at Domus Medica. Only student related e-mails or information about student activities will be accepted. E-mails regarding, for example, lost/found items will not be accepted. If you want to send an e-mail to your whole class, you should contact the Student Information Centre to get the e-mail address list and guidelines for its use. If you don't receive e-mails which have been sent to your class, you will need to log on to the Student Website where you can change your e-mail address.

Practical Information

Semester registration: (for Norwegian students only)

3. The Semester's Academic Content

The semester consists of 19 weeks of teaching and instruction, culminating in one week of exams and evaluation. The semester is divided into two parts: one part focuses on the physiological conditions and diseases of women and reproduction; the other part on the health and illness of infants, children and adolescents. The following subjects are included: Anatomy, Physiology, Genetics, Pathology,

Clinical Biochemistry and Physiology, Pharmacology, Gynaecology/Obstetrics, Paediatrics, Child Psychiatry and Family Medicine/General Practice.

4. Aims and objectives

Aims

This semester aims at a standardized basic education in Gynaecology/Obstetrics, Paediatrics and Child Psychiatry for all doctors regardless of which specialization you choose later.

The over all aims of the 9th semester curriculum is to prepare you for work in disease prevention, and to give you the necessary skills for treating diseases and assessing, maintaining and improving:

- health in infants children and adolescents
- health of the male and female genital tract
- health in fertile individuals before, during and after pregnancy, including delivery and breast-feeding
- health in the pre-, peri- and postmenopausal years

Medical personnel face these challenges in various situations: at the mother-and-child health care centres (*helsestasjoner*), in schools, at work, in a doctor's practice, on call and in society in general. You will learn to combine theoretical knowledge with practice in a primary care setting and to collaborate with the hospital based maternity units (both in- and out-patient based units) in the management of patients.

The first step in achieving the required skills is to study the following areas: Anatomy and Physiology of the Reproduction Systems, Gynaecology, Obstetrics, Paediatrics and Child Psychiatry. An intention of the present semester is to provide a platform for continuous lifelong learning. Throughout the semester we hope to engage your interest in the subjects taught and to inspire some of you to perform research on health and disease in these areas.

The aim of the courses in paediatrics and gynaecology/obsterics is likewise to acquire the skills and qualifications needed to work within these fields at a primary health care level and to create interest for further specialization in the respective fields..

The teachers in paediatrics and gynaecology/obsterics hope you will enjoy the clinical rotations and wish you to become really involved in the clinical care of women and children so that you gain some of the sense of satisfaction that comes from working with these patients.

Learning objectives

4.1 Normal Anatomy and Physiology:

The genital system

At the end of the semester, you must be able to describe and explain:

Macroscopically:

- The structure of the female and male genital tract and the important clinical relations of the pelvic bones, joints and ligaments, pelvic floor and viscera.
- The abdominal cavity and the relation between the peritoneum and the pelvic structures in both genders.
- The surface anatomy of the pelvis and its function as the birth canal.
- The main features of organogenesis of the genital tract, especially development of malformations.
- The blood supply, lymphatic drainage and innervation of the pelvis.

- The structure and function of the placenta.

Microscopic structure and function of:

- The testis, epididymis, ductus deferens, prostate, urethra, penis, vagina, vulva, ovaries, uterus and fallopian tubes.
- The endometrium and cervix, including hormonal changes during the menstrual cycle.
- The placenta: development, umbilical cord and membranes.
- The breasts and the changes during lactation.

Physiology and Biochemistry

At the end of the semester, you must be able to describe and explain:

- Physiological mechanisms related to the menstrual cycle, sexual activity, pregnancy, menopause and ageing (in both genders).
- The physiology, biochemistry, endocrinology and pharmacology of reproduction applied to clinical work: analytical endocrinology (pituitary gland/sex hormones/adrenal glands).
- The different blood tests used in assessing the function of the gonads and pituitary gland.

Reproductive Pathology

At the end of the semester, you must be able to describe and explain:

- The most important defects and changes associated with male and female infertility.

4.2 Obstetrics and Gynaecology

Attitudes

At the end of the semester you shall be aware of and be able to reflect on the ethical issues in obstetrics and gynaecology in order to:

- respect a patient's choice in difficult ethical situations
- respect a woman's right to self-determination
- treat women with compassion and respect regardless of background
- ensure empathy towards women with regard to a gynaecological examination
- understand the importance of objective information to a woman and her family

Knowledge

At the end of the semester, you must be able to describe and explain:

- the normal physiological changes of pregnancy and puerperium
- complications of pregnancy and what conditions require referral to a specialist unit
- the normal birth
- complicated/pathological birth
- pathological conditions after birth
- medication in pregnancy
- breast feeding
- medication in breast feeding
- oestrogen substitution in menopausal and elderly women
- vaginal bleeding disorders, diagnostic tests and treatment
- gynaecological infections, diagnostic tests and treatment
- benign tumours of the genital tract
- the different types of gynaecological cancers and their treatment
- common causes of pelvic pain and problems related to sexual dysfunction
- common causes of infertility, their diagnosis and treatment

- how genital descent (pelvic organ prolapse) is diagnosed
- causes of urinary incontinence, their investigation and treatment
- important morphological changes in common gynaecological disorders, diseases related to pregnancy and childbirth (infections, tumours, vaginal bleeding disorders, trophoblast diseases and placental dysfunction, pathology of infertility including the relevant conditions in men)
- the causality between morphological changes and the characteristics of the symptoms, aetiology, pathogenesis and prognosis of the diseases of the female genital organs
- how to perform a critical review of an autopsy report, assess histopathological and cytological test results
- the different views and ethical issues in abortion on request related to the Norwegian abortion law.
- the various ethical approaches to prenatal diagnostics and selective abortion
- the various ethical approaches to modern reproduction technology

Clinical skills.

At the end of the semester, you must be able to:

- instruct patients on birth control and sterilization
- inform women who apply for abortion
- perform a gynaecological examination (both inspection and exploration)
- identify signs of genital infections and perform relevant tests
- take a cytological sample from the cervix
- insert and remove an IUCD
- perform an assessment on women using a pessary for pelvic organ prolapse
- understand and use *Helsekort for gravide*
- perform pre-pregnancy and antenatal care
- judge the size of the pregnant woman's uterus and measure from the symphysis pubis to the fundus of the uterus (*SF-mål*)
- palpate the fetal position (*Leopolds/Pawliks håndgrep*)
- count the fetal heart rate using a midwife (*Pinard*) stethoscope
- guide mothers who have problems breast feeding
- examine and estimate the effacement and dilatation of the cervix in labour
- assist a normal birth

4.3 Gynecological/obstetrical pathology

At the end of the semester, you must be able to:

- identify the organ manifestation of the most common genital diseases, using microscopic and macroscopic examination methods
- explain the most important morphological changes observed in the most common diseases of the vulva, vagina, cervix uteri, endometrium, myometrium, fallopian tubes, ovaries and placenta
- explain the connection between morphological changes and the symptomatology of different diseases, as well as know their aetiology, pathogenesis and prognosis
- perform a critical review of an autopsy report and assess histopathological and cytological test results
- recognize and describe the morphological, macroscopic and histological changes in the most common pathological conditions in the female abdomen

4.4 Paediatrics and Child Psychiatry

Attitudes

At the end of the semester, you should have acquired and developed an attitude that:

- ensures empathy with ill children and their life situation.
- shows the child and family respect regardless of the type of disease or problem or background.
- considers the child and family as active collaborators in the treatment and problem solving process.
- makes you able to pass on medical information in an open minded and reflective way.
- makes you actively seek help from more experienced doctors whenever you need it in the clinical work.

Knowledge

Growth and development.

At the end of the semester, you must be able to describe and explain:

- normal growth and development of the child and adolescent
- collect and select data about a child's development and independently draw conclusions from this information
- assess a child's state of nutrition
- estimate nutritional requirements and its management for different age groups and for special childhood diseases

Prophylactic Paediatrics

At the end of the semester, you must be able to describe and explain:

- the importance of preventive health care for children, families and society
- how preventative health work for children is organized in Norway
- the most important physical, psychological and social risk factors for the child's and family's health
- the Norwegian vaccination program, contraindications and side effects of vaccines
- the importance of correct use of antibiotics to prevent development of bacterial resistance.
- how to organize and coordinate intervention and health services for children and adolescents with chronic conditions and disabilities in the community, while maintaining a holistic and family perspective

Curative Paediatrics

At the end of the semester, you must be able to describe and explain:

- how to detect, examine and treat children in life-threatening situations (emergency Paediatrics) (see special course in the 12th semester)
- how to examine a newborn
- the main principles in Adolescent Medicine
- the pathogenesis and pathophysiology of common and important diseases in children
- how to diagnose and manage the common and important diseases in children

Child Psychiatry

At the end of the semester, you must be able to describe and explain

- the psychological and social aspects of chronic illness in childhood.
- age specific difficulties and psychiatric disorders.
- emotional disturbances with childhood-onset (F93 in ICD-10), such as separation anxiety, social phobia and sibling rivalry.

- disturbance of social function (F94) with childhood-onset, especially the reactive or non-specific attachment disorders.
- tics disorders (F95)
- signs of abuse and neglect in children and adolescents.
- available options from *Barnevernet* and other initiatives for chronically ill and disabled children and adolescents.

In addition, you must be able to recognize the symptoms, signs and explain the treatment guidelines for:

- diseases and injuries in the CNS
- upper and lower respiratory tract diseases
- gastrointestinal diseases
- diseases in the kidneys, urinary tract and genital tract
- heart and circulatory failure
- diseases of the blood, blood-forming organs and the coagulation system
- immunological diseases
- cancer in children
- hormonal and metabolic diseases
- bone, muscle and skeletal diseases

Clinical skills

At the end of the semester, you must be able to:

- evaluate the growth and development of the normal child, both physically and mentally
- contribute to the prevention of disease, malnutrition, injury, child abuse and neglect
- diagnose disease, anomalies and deviations from the expected development
- recognize symptoms and signs of serious illness and to commence intervention and treatment
- stabilize a child's vital functions at the scene and during transport
- start and follow up medical treatment of the most common diseases in the child and adolescence

Practical clinical skills:

At the end of the semester, you must be able to

- cooperate with the child and family.
- obtain a problem oriented medical history.
- perform a physical and psychomotor examination at different ages.
- assess a child's general condition.
- assess a child's fluid balance.
- judge fontanelles and sutures.
- judge the red reflex using an ophthalmoscope.
- use an otoscope.
- inspect the oral cavity and throat using a spatula and lamp.
- use percussion in examining the thorax.
- use the stethoscope in examining the lungs (assisted auscultation).
- use a stethoscope and palpation in examining the heart.
- palpate peripheral pulses and measuring the blood pressure.
- examine the abdomen using palpation, percussion and a stethoscope.
- examine the genital organs.
- trigger primitive reflexes.
- test muscle tone and power.

- test sight and hearing as well as assess speech development.
- test fine and gross motor skills.
- trigger deep tendon reflexes.
- measure head circumference, plot growth curves, and assess puberty.
- estimate hip abduction, spinal and foot deformities.

You should have observed the following being performed:

- capillary blood drawing.
- vaccination.
- administration of intravenous injections, lumbar spinal puncture.
- measurement of body temperature.
- how to administer medication at various ages.

4.5 Pediatric pathology

At the end of the semester you must:

- be able to describe and explain the most important morphological changes observed in the most important diseases and the most common pathological conditions in the infant, toddler and child.
- to understand the reasons for perinatal diseases and death, tumours, inflammation, degeneration and congenital malformations.
- be able to explain the connection between morphological changes and symptomatology of different diseases, aetiology, pathogenesis and prognosis (where possible).
- know how to perform a critical review of an autopsy report, assess histopathological and cytological test results.

4.6 Pharmacology in pediatrics and gynaecology/obstetrics:

At the end of the semester, you must have knowledge about

- pharmacology and endocrinology of reproduction and their application in clinical situations.
- sex-hormones and contraceptives
- drugs affecting uterine motility
- antihypertensive drugs used in pregnancy
- drugs in pregnancy
- drugs during breastfeeding
- hormonal replacement therapy
- drug treatment of infections in gynaecology
- cytotoxic drugs for gynaecological cancers
- pharmacological aspects of urinary incontinence
- the fundamentals and principles of drug treatment of disease in children and adolescents;
 - in the central nervous system
 - in the respiratory tract
 - in the gastrointestinal tract
 - in the kidneys, urinary tract and genital organs
 - in the cardiovascular system
 - in the blood and haemopoietic organs
 - related to hormones and metabolism

4.7 Drug prescription (for Norwegian students only)

The student must be able to:

- define the regulations that concern drug prescriptions and the different prescription classes (A, B, C).
- fill out the different types of prescriptions.
- define the most important regulations on reimbursement of expenses for essential medication (“*blå resept*”).
- define where to find information on the prescription group a medication belongs to and if it can be prescribed on “*blå resept*”.
- describe the most important reasons for incorrect use of medication (non-compliance).
- prescribe technical/ clinical aid remedies (“*hjelpemidler*”) and adequate reimbursement options for the patient in pediatrics and gynaecology/obstetrics (e.g. inhalation equipment, incontinence pads etc)

5. Organisation of Undergraduate Teaching Methods

The first three weeks of the semester will focus mostly on aspects of reproduction, but will also include an introduction to Paediatrics and Obstetrics/Gynaecology. A course in gynaecological examination techniques in the Skills Centre (*Ferdighetscenter*) will provide practice using examination models. There will also be instruction on practical procedures performed while examining a patient.

Clinical rotations in Paediatrics (PED) and Gynaecology/Obstetrics (OBGYN) run parallel during the semester.

Teaching and clinical instruction is spread over 4 days of the week. Thursday's are for independent study.

Practical small group teaching takes place in the mornings, Monday through Wednesday, with the possibility of continued work in that department during the evening and night. Friday's are for PBL instruction and seminars.

Teaching forms at The Faculty of Medicine

Lectures

Might be: a) an introduction to a topic b) a supplement to learning in groups on some of the more difficult topics c) a summary of new findings within a topic d) an overview of a topic.

Clinical small group teaching

Bed side teaching with a doctor in small groups (2-12 students) at hospital departments or outpatient clinics, alternatively at healthcare centres outside the hospitals.

Students, either individually or in small groups, will have organised attendance at a hospital department or outpatient clinic. Assignments and teaching will be arranged (for example taking histories, performing practical procedures and other work at the department) and/or observing doctors in their work.

Students are placed either individually or in small groups at hospitals, healthcare centres and general practices. Under the supervision of a doctor they will be taught and can participate in the work.

PBL (Problem Based Learning)

PBL is a form of learning which takes place in small groups; it is more about understanding and explanation than problem solving. The method is organised in the following way: A group of 5-8 students work on an assignment at regular meetings (twice a week per assignment). In the first meeting, the students are presented with a case, normally a patient history, after which they formulate the learning goals. Through the week they work independently; at the second meeting they discuss the case based on the knowledge and insight they have acquired since the first meeting. Focus should be on exchange of knowledge and whether the problem is understood. The teacher's role is to supervise and direct the students towards adequate and realistic learning goals.

Courses

Laboratory courses, a microscopy course, dissection, clinical skills training at the clinical skills centre etc.

5.1 Plenary Instruction

Plenary instruction will be in the form of lectures and weekly seminars in the Auditorium at Rikshospitalet. The seminars will function as an introduction to various subjects, each session being half or a whole day in duration. Various methods of instruction and ways of engaging the students will be used. The lectures will relate to the different learning goals of the semester, mostly covering themes which are not addressed in the seminars.

Week 11 will focus entirely on theory, without any clinical small group teaching.

5.2 Seminars

Introductory seminar in paediatrics.

Coordinator: Professor Ola Didrik Saugstad

Normal development and growth of a child. Prophylactic measures in paediatrics: regular check-ups with a paediatrician or school nurse. Immunization. Presentation of the field of paediatrics.

Overview of semester content and objectives. Presentation and recommendation of study material and books. Emphasis is placed on the normal development and growth of a child. A video will be shown and guest lecturer, Gunnar Oftedal, will provide insight into paediatrics in general practice and in specialist practice. The lecture on children of uncertain gender is a worthwhile intellectual tidbit.

Congenital disease. Prenatal diagnosis

Coordinator: Professor Erik Thaulow

Collaboration between lecturers from the medical fields of paediatrics, obstetrics, pathology, psychiatry, clinical biochemistry, genetics and ethics. The seminar is an introduction to the predisposing factors, clinical symptoms and treatment of selective congenital conditions. The teaching methods used are: brief, poignant lectures and case studies, debated by a panel of experts from the different medical specialities.

Benign Tumours in Gynaecology

The seminar will discuss the clinical issues related to benign tumours in the pelvis. Acute symptoms such as torsion, rupture and internal haemorrhage will also be discussed. The diagnostic tests and treatment of such tumours will also be a focus of the seminar. Short review lectures and discussion of various case studies will be performed.

Half-day seminar: Placental Dysfunction and Hypertension.

The seminar will examine important issues in the areas of: pre-eclampsia, placental dysfunction and growth retardation.

Brief summaries, case studies and discussion will be included.

Chronic pelvic pain and sexology

Brief Lectures, discussions and case studies will give the student a better knowledge of chronic abdominal pain and the most common areas of sexual dysfunction in both men and women. Additionally, diagnostic tests and therapeutic options will be discussed. This seminar is a collaboration between GP's, psychiatrists and a sexologist.

Gynaecological Oncology

Day seminar, addressing the various types of cancer in the female genital tract, associated clinical symptoms and the different screening programs. The students will learn about the development of different forms of cancer, tumour growth and metastasis, stage, classification and evaluation of prognosis. Treatment, follow-up, prophylactic medicine and cancer screening will also be discussed. There will be collaboration between a pathologist, pharmacologist and a geneticist during this seminar.

Infertility

The focus of the seminar is on diagnosis and investigation of infertility, hormonal stimulation therapy and the various forms of artificial insemination. The psychological aspects of infertility will be discussed in depth. The student will learn which investigations can be performed in general practice and those that require a specialist. Interdisciplinary collaboration between general practitioners, psychiatrists and clinical biochemists will also be discussed.

Cancer in children.

Cancer is still the number one cause of death in children aged 1 to 14 years. A family that experienced cancer with one of their children will be invited. They will give the students insight into the effects of cancer on a family and how the health care system works during such a difficult period of life.

A summary of the most common types of cancer in children as well as the diagnosis and treatment will be given. A pathologist with special interest in this area will also participate.

Children with special needs / chronic illness

The seminar provides an overview of various health disorders in childhood which can later result in chronic disability. The diagnosis and treatment of such disorders will be presented. We will discuss habituation, health measures, state funding, psycho-social support and emotional support which may be of benefit to this group of patients.

Child abuse and neglect

The student will acquire a general overview of the types of child abuse and child neglect enabling him/her to recognize this in their practice's daily contact with children, adolescents and parents. Organisation: Three 45-minute lectures where current approaches to child abuse and neglect will be touched upon. Themes include: physical abuse, sexual abuse and Munchausen's syndrome by proxy. Problems concerning the laws of child healthcare services (Lov om barnevernstjenster) and the professional oath of secrecy will be addressed. Such laws can, at times, endanger interdisciplinary collaboration, particularly when used incorrectly.

Emergency paediatrics in the infant (the first year of life)

Collaboration between the medical specialities of paediatrics, forensic medicine, microbiology, biochemistry, genetics and infectious diseases. This seminar will offer the students an introduction in emergency medicine in paediatrics during the first year of life.

Both the theory and practice will be presented, along with the most life-threatening conditions. The transition from the prenatal to postnatal stage, asphyxia and resuscitation will be addressed. Also on

our list of topics are the most prevalent congenital deformities, infections and the complications of premature children, congenital metabolic disorders, convulsions / seizures and cot death.

Contraception

The seminar will address the different contraceptive methods available, their benefits and side effects. The most common questions asked by patients will be discussed, and there will be practical guidance on the prescription of contraceptives.

Adolescent medicine

Lecturers from the fields of paediatrics, gynaecology and child psychiatry. The seminar contains overview lectures and discussions.

Theme: What health problems are common in adolescence? What problems in adolescence must be taken into consideration when diagnosing diseases and implementing treatment? Birth control, accident prevention, alcohol and drug use will also be addressed.

Special considerations in the treatment of chronic disease in the adolescent. How can we improve the health services offered to this age group in both general practice and in hospital medicine?

Infections in Gynaecology. Coordinator: Babill Stray-Pedersen

This seminar gives an overview of different genital infections in women of fertile age. Clinical evaluation, diagnosis and treatment the different infection are adressed.

Congenital and perinatal infections. Coordinator: Babill Stray-Pedersen

The infections of importance for pregnant women, the fetus and newborn baby are discussed. All perinatal topic discussions are focused on the practical aspects from a clinical and microbiological point of view.

Seminar: Paediatric gastroenterology.

Short overview lectures and more thorough presentations on the most frequent gastrointestinal diseases observed in children in general practice.

Genital descent and urinary incontinence

Collaboration with general practice.

Instruction methods: brief lectures and case histories. Objective: undescended testes and the different types of urinary incontinence. There will be a discussion and demonstration of aids for incontinence, of pharmacological and surgical treatment, and financial refunding available to patients.

Maternal and child health in the world. Immigrant aspects.

Coordinator: B Stray-Pedersen, Leif Brunvand

The seminar is a collaboration between Gyn/Ob and pediatrics. The global aspects of maternal and child health are discussed especially maternal mortality, antenatal and birth care, newborn and infant care in the developing countries. The special needs and of the immigrant mother and child in Norway are focused upon as well as how to deal with FGM.

Asthma

The seminar consist of a thematic overview of: asthma in childhood, the changing pattern of causative factors, the clinical presentation of asthma during childhood, (clinical case study) and hospital admissions due to asthma. What type of examinations should be performed? What kind of treatment should be prescribed? What kind of follow-up should the child receive from a general practitioner and the paediatric chest physician in an outpatient clinic? Professor Karin Cecilie Lødrup Carlsen, Associate Professor Geir Håland and Kai-Håkon Carlsen participate in the seminar.

Emergency paediatrics in primary care

The aim of the seminar is to give an introduction to the most common conditions in primary care emergency paediatrics with emphasis on the need for acute interventions and hospitalisation. Key element: Respiratory distress, fever, septicaemia and meningitis, appearingly life threatening events (ALTE) and dehydration. The seminar will be based on case histories discussed by a panel of experts including a general practitioner (GP), hospital based paediatricians and microbiologists.

5.3 Small group teaching

5.3.1 Problem Based Learning (PBL)

The semester includes eight PBL assignments of one to two weeks in duration.

PBL instruction will take place at Rikshospitalet and Akershus University Hospital.

As in previous semesters, the inclusion of PBL is fundamental to the course of study. The responsibilities and tasks of advisers and students in the PBL colloquium are, as before, based on the now familiar seven step process. The groups are put together prior to week one of the semester.

This learning method is fundamental to this course of study, gives the students a considerable amount of influence and responsibility for their learning. In addition, PBL allows for an interdisciplinary approach. Using a situation or course of events taken from the real world, the students acquire knowledge and insight such that they can *understand and explain the underlying mechanisms*.

The work follows a structured plan which is divided into three main sections: (1) preliminary group meetings on Tuesdays where the students will come to an agreement about their learning goals, (2) obtaining information independently through the week, and (3) closing group meetings on Fridays.

The method of working with PBL tasks has seven steps:

- Understand the situation/clarify terminology
- Identify the problem
- Suggest possible causes (hypothesize)
- Connect problems and causes
- Decide what type of information is needed
- Obtain information
- Apply the information

It is very important to use the bulletin boards to communicate with the other members of the group. After each PBL assignment has been completed, the group should self-evaluate how well they functioned and how thoroughly the assignment was completed.

Every PBL group has approximately eight students and a permanent teacher as an adviser. The groups are chosen by drawing lots prior to the start of the semester.

Duties for advisers and students in PBL group work: both advisers and students

Advisers and students are responsible *for the group functioning properly*. This means all must take part in creating an open and acceptable atmosphere where everyone can participate and all questions and suggestions are treated with equal respect. The first meeting should begin with a clarification of expectations.

The student's responsibilities/duties

Attendance at the group meetings

The outcome of the group work is dependent on every member's attendance.

Active role at the meetings

All students are expected to participate and come prepared. This means having obtained the information that the group has decided is necessary to complete the assignment.

Ensure the process moves forward by complying with the seven steps previously listed.

Challenge each other through debate and discussion. Review the reasoning behind conclusions and assertions.

At the end of the second meeting *the assignment will be evaluated* together with the PBL adviser. A form must be filled out and delivered to the semester secretary

The adviser's responsibilities/duties

Ensure that the students follow the necessary steps for logical problem solving (the seven steps). In the early phase of the assignment the adviser should contribute to the discussion, help with the choices being made, and make sure the students are focusing on the appropriate aspects of the problem.

Ensure that the students are on the right track as to the information they will research. This can be accomplished by questions and requesting summaries. To do this the teacher must have adequate knowledge of the semester's aims and know what the students have learned in the past.

Ensure that the students' goals concerning information acquisition are realistic. The adviser must steer the students in the right direction i.e. if their goals seem too comprehensive or if they spend too much time on tangential aspects of the problem.

The adviser should use questions *to make sure the students to an adequate depth* in their analysis of the problem, not just use superficial knowledge and explanations.

When there is *conflict* within the group, the adviser should help the group see the problem – not just solve the problem.

Give advice on where and how *information* can be obtained.

Rules for absence from PBL

PBL attendance is mandatory.

A registration sheet will be used at each meeting to keep track of attendance.

The PBL adviser will send the dated list to the secretary of the semester committee, who will file the lists.

Students are allowed to be absent from PBL instruction a maximum of 20%.

The calculation is based on the number of meetings.

Neither a reason for the absence, nor written confirmation is required.

If a student is absent from PBL instruction between 20% and 30%, he/she must complete a written assignment, to be approved by the semester committee. The choice of topic will relate to the missed material.

Reasons for being absent between 20% and 30% are not required.

If a student is absent for more than 30% of the PBL instruction, he/she must repeat the semester regardless of the reasons for his/her absence.

Maximum absent days permitted for each semester:

Semester	Number of weeks with PBL	Number of meetings	Maximum Absence of 20%	Maximum absence of 30% (substituted with a written assignment)	Maximum absence In each period (semesters 1-4)
1. semester	19	38	8		4
2. semester	19	38	8		4
3. semester	14	28	6		3
4. semester	13	26	6		2 /4
5. semester	11	22	4		
6. semester	10	20	4		
7. semester	10	20	4	6	
8. semester	6	12	2		
9. semester	8	16	3	5	
10. semester	5	10	2		
11/12. sem.	8	16	3		

Students are not allowed to change PBL groups.

A student can apply to the faculty to be put in a particular group well before the start of the semester.

6.3 Small Group Teaching - Clinical Rotations

Each student will be assigned a number.

The class will be divided into two groups: Group K 1-53 and Group K 101-154.

Clinical small group teaching in Obs/Gyn and Paediatrics will take place in the respective departments at Oslo University Hospital (locations Ullevål and Rikshospitalet) and Akershus University Hospital

Clinical small group teaching begins in semester week three and is organized into two sections:

- a seven week rotation in Obstetrics and Gynaecology
- a six week rotation in Paediatrics

Additionally, each student must participate in a 5 hour "Introductory course" in Obstetrics & Gynaecology and separately a "Practical course on mannequin" which will take another 15 min per each student. At the end of the rotation each student must participate in a "Summary course" (refer to the tables below for more detailed information).

Clinical small group teaching and courses are mandatory.

The rules for absence of 20% and 30% also apply here. Compensation for absence over and above the time allowed during the clinical rotation must be decided by the teaching department.

Obstetrics and Gynaecology

Clinical rotation takes place at Oslo University Hospital (locations Ullevål and Rikshospitalet) and Akershus University Hospital (AHUS), Departments of Obstetrics and Gynaecology. The students are divided into group K 1-53 and Group 101 -154. Group K1-54 has its Obs/Gyn clinical rotation during the first half of the semester and then switch to Pediatrics; Group 101-154 rotate the other way.

Both groups are divided into 3 teams, the largest at "Ullevål", one smaller at "Rikshospitalet", and the smallest at AHUS.

The AHUS group will have all obstetrical and gynaecological rotation at AHUS (and gynaecological oncology rotation to Radiumhospitalet, the same as for the Rikshospitalet/Ullevål groups)

The “Rikshospitalet” and “Ullevål” groups will have obstetrical rotation at Rikshospitalet and Ullevål, respectively. All these students will have same gynaecological rotation system at Oslo University Hospital. The “Ullevål” and “Rikshospitalet” groups will have the same gynaecological oncology rotation to Radiumhospitalet as the AHUS group.

Note the different times and locations in the schedule.

The class is divided in the following way:

- Rikshospitalet and Ullevål students: **K 1-45** and **K 101-145**
- AHUS students: **K 46-53** and **K 146-154**.

The Introductory Courses, Summary Course, the Out Patient Clinics, Labour Ward and Gynaecology Ward sessions **are ALL mandatory**. Attendance is checked at the end of the semester using the Log Book. Every student should have a Log-Book where the mandatory teaching must be signed.

1. Introductory Courses

I and II (regular clothing)

Course I: 2,5 hours - Instruction in gynaecological examination and normal birth.

K 1-45 and **K 101-145** at B2. M013A/B, Rikshospitalet.

K 46-53 and **K 146-154**, S305.012 AH/ AHUS

Course II: 2,5 hours - Introduction of antenatal chart (*helsekort for gravide*), demonstration of forceps/vacuum cup and breech delivery.

K 1-45 and **K 101-145**, at B2. M013A/B, Rikshospitalet.

K 46-53 and **K 146-154**, S305.012 AH/ AHUS

2. Summary Course: - 2,5 hours (regular clothing)

Organised at your rotation hospital : refer separate list.
centre Gyn/Obst room B2.1009, 1st floor, Rikshos.

Rikshospitalet: Skill

Ullevål: Location: Information will be given later at the hospital

AHUS: Location: Information will be given later at the hospital

3. Clinical Duty- 7 weeks

There should be maximum four students at each instruction unit.

1. Instruction at the *gyn.avdeling*: gynaecology ward / operating theatres / day surgery

Instruction location: small groups OUS (Ullevål 2 days, 1 day Rikshospitalet), AHUS (one week)

Instruction type: Clinical rounds, case discussions, gynaecological examination, assisting at operations

2-3. Instruction at the *Gyn. Poliklinikk (outpatient clinic)*

Instruction location: Ullevål (two weeks, of which 1 day at outpatient RH), AHUS (two week)

Instruction type: Clinical patient work

4. Instruction at **Radiumhospitalet (one day)**

Teaching method: Clinical rounds, case discussions, gynaecological examination in anaesthesia, assisting operations

5-6. Instruction at *forløsning/barsel avd.* (labour / maternity ward) (two weeks)

Location: Rikshospitalet ,Ullevål and AHUS

Time: All students are invited to spend two full weeks (day and night) at the delivery ward. The students should divide the days between them. Three days each week are mandatory; you are required to assist at a minimum of three births and to have observed at least one caesarean section.

Teaching methods: Clinical rounds, assisting in labour, delivery and follow up in the maternity ward.

7. Instruction at the *føde-poliklinikk antenatal outpatient clinic* (one week)

Location: Rikshospitalet , Ullevål and AHUS
Time: Two to three days, there is a schedule for clinical duty at each hospital.
Teaching method: Clinical patient work.

Students have two mandatory days at the obstetric outpatient clinics. You have the possibility to add a day and this can be arranged with the head nurse of that department. The students must coordinate this amongst themselves to avoid overbooking.

Note: It is important to contact the outpatient clinics to make sure they have appointments with patients on the additional day.

Oslo University hospital, Ullevål

In charge:

Professor Erik Qvigstad (Gyn)

Tel: 22 11 98 15. E-mail: erik.qvigstad@medisin.uio.no

Professor Annetine Staff (Gyn)

Tel.: 22 11 98 00. E-mail: annetine.staff@medisin.uio.no

Professor Britt Ingjerd Nesheim (Obst)

Tel: 22 11 98 13 / 98 00. E-mail: b.i.nesheim@medisin.uio.no

Klinisk stipendiat Katariina Laine

E-mail: lely@uus.no and kattiksen@yahoo.no

Klinisk stipendiat Nina Verket

E-mail: n.j.verket@medisin.uio.no

Wardrobes and white clothing are in *underetasjen* (Basement) at *Barnesenteret*

Føde avd. /barsel (Labour/Maternity ward) 2 weeks

Students to meet on the **1st Monday at 09:15** on *fødeavdelingen B*, 3rd floor where the lecturer or a member of the teaching staff will meet you. You will be allocated to one of the 2 labour wards. The clinical duty lasts from Monday to Wednesday. The rest of the week including the weekend is optional. Students must organise the scheduling of the week so that no more than two students are on each ward at the same time. The ward has no sleeping quarters for students.

Føde poliklinikk (Antenatal Clinic) 1 week

Attend 08:45 Monday through Wednesday. You will be allocated to one of the 3 antenatal clinic rooms. One of these days should be spent with the ultrasound screening midwife and / or the Feto-Maternal Medicine ultrasound doctors. Due to the limited number of clinic rooms and occasionally large student groups it may be necessary for you to attend afternoon clinics or Thursday & Friday clinics

Gynekologisk avdeling (Gynaecology Ward) 1 week

Attend: *Gyn. post*, 6th floor at 08:45. You will be met by a member of the teaching staff.

Gynekologisk poliklinikk (Gynaecology Outpatient Clinic) 2 weeks

Attend at *gyn-pol.* 1st floor Monday through Wednesday 08:30 – 11:30. You will be met by a member of staff and allocated to a clinic room or the day surgery unit.

Gynavd I & II and Fødeavd. I & II represent two weeks at each department (four weeks total).

The number of students who attend Gynaecology Outpatients at Ullevål University Hospital, exceeds the number of outpatient rooms available, this necessitates a rearrangement of your clinical group rotations: which will now take place between Mondays and Thursdays. This applies to both weeks in Gynaecology Outpatients.

We can take 6 students each day, which means the 2 students last on their group list, should attend on Tuesday, not Monday. Further information will be given when you arrive at the Outpatients.

Oslo University Hospital, Rikshospitalet

In charge: Professor I Babill Stray-Pedersen Phone: 23 07 26 51
E-mail: babill.stray-pedersen@klinmed.uio.no

Professor Thomas Åbyholm Phone: 23 07 26 19(Gynaecology)
E-mail: thomas.abyholm@rikshospitalet.no

Professor Tore Henriksen Phone: 23 07 26 26 (Obstetrics)
E-mail: tore.henriksen@rikshospitalet.no

Professor Guttorm Haugen Phone: 23072962 (Ultrasound)
E-mail: guttorm.haugen@rikshospitalet.no

Professor Tom Tanbo Phone: 23072621 (Gynaecology)
E-mail: tom.tanbo@rikshospitalet.no

Research fellow Gry Findal Phone: 23 07 26 48
E-mail: gry.findal@medisin.uio.no

White clothing can be found in the linen boxes next to the student changing room on *U-etasje B-avsnittet*.

Fødeavdeling/barsel (labour/maternity ward)

Students have 2 weeks clinical duty at *labour/maternity ward* on the 4th floor. **Three days (from 8.00-12.00) of both weeks are mandatory.** Rikshospitalet has one labour ward on the 4th floor, and one part of the labour ward is Department for pathological pregnancies "Observasjons post". The students meet just after the midwife's morning report at 08:00 at "vaktrommet" (Room nr. E2 4052) at labour ward "Fødeavdelingen" on the 4th floor. Maternity ward is on the 3rd floor and students are advised to attend clinical rotation one day in their second week at maternity ward (Tuesday: 09:30).

Expect to be at the ward for a 24 hour period; remember that three days of each of the two weeks are mandatory. You are, of course, welcome to be there the whole week including the weekend. We have sleeping quarters for one student during clinical duty at labour ward: Room # E3.3027, located on the 3rd floor at the E3-section (just by the ID-card office).

The doctor's pre-rounds will start at **E2.4098** 0830h every day, Wednesdays and Fridays at 0900h. You are invited to join, but if you are busy attending a birth, please continue to do so.

During your first week at the labour ward on Monday and Wednesday, and during second week on Monday research fellow Gry Findal, will do the rounds with you starting from 0830, emphasis on the method of abdominal palpation (Leopold's/Paulik's manoeuvres), *measurements of the Fundal height, and checking of the foetal heart rate with Pinard wooden stethoscope.*

Føde poliklinikk (Antenatal outpatient clinic)

Students have 1 week clinical duty on *Antenatal outpatient clinic*. **Three days (from 8.30/9.00-12.00) of the week are mandatory.** Attend at *Antenatal outpatient clinic*: PK-US(ultrasound), PK0 og PK 4 on the 3rd floor. Starting 09:00 (PK US) or 08:30 (PK0 og PK 4) *Wednesday at 09.00.*

Ask the secretary at reception for today's charts/journals in order to read prior to the patient consultation. You are therefore advised to arrive 10-15-minutes prior to the first appointment

On the days not booked for clinical duty, you are free to join the antenatal outpatient clinic only upon appointment with the Midwife in charge (tel.23072616)

Fertility sectio

Students have 1 day small group tuition at the infertility section, led by Professor Tom Tanbo. One day (wednesday) **from 8.30-11.15, mandatory.** Attend at the meeting room (B2.M013A/BB) on the 3rd. Professor Tom Tanbo is responsible for the half day tuition.

Fertility outpatient clinic

Students will rotate as part of their *Gynaecological outpatient clinic rotation and have a half morning each, (from 8.00-12.00), mandatory.* Attend at 08:30 at the *fertility outpatient clinic*: PK1, PK2, IVF on the 3rd floor. Ask the secretary at reception for today's charts/journals in order to read prior to the patient consultations. You are therefore advised to arrive 10-15-minutes prior to the first appointment.

Fødeavdeling/barsel (labour/maternity ward)

Attend Monday at 07:30 for the midwife's morning report at *vaktrommet, fødeavdelingen, B405* where you will be assigned to one of the midwives during the dayshift. The clinical duty lasts for two weeks from Monday to Wednesday. The rest of the week including the weekend is optional.

Gynekologisk avdeling (gynecologic ward)

Attend Monday at 08:00 at the morning session in the *meeting room, B305*. After the meeting you will participate in the *clinical round and examine patients* on the Gynaecological ward S305, or attend the *operating theatre (B405)*. The clinical duty is to be divided between the two students (Monday to Wednesday) as you wish.

Føde poliklinikk (Antenatal outpatient clinic)

Attend Monday at 08:30 at *Kvinneklinikkens poliklinikk, S301*. The clinical duty at *ultrasound screening and føde pol.* is to be divided between the two students (Monday to Wednesday) as you wish.

Gynekologisk poliklinikk (gynecologic outpatient clinic)

Attend Monday at 08:30 *Kvinneklinikkens poliklinikk, S301*.

DKS (skiftestue) (day surgery)

Attend Monday at 08:30 *DKS (dagkirurgisk senter) B201*.

NB: The clinical duty at *Gyn.pol* and *DKS (skiftestua)* is to be divided between the two students assigned to Gynecologic out patient clinic (Monday to Wednesday) as you wish.

Clinical Duty KK AHUS for 9th semester Autumn 2011

SW = Semester week, CW = Calender week

Gynpol = gynekologisk poliklinikk (gynae outpatient clinic);

DKS = Dagkirugi = Day surgery unit

PKO=fødepoliklinikk (antenatal outpatient clinic) (consultant);

PKUL = ultralydpoliklinikk (ultrasound outpatient clinic midwife).

Det Norske Radiumhospital

<http://www.med.uio.no/english/studies/programmes/places/radiumhospitalet.html>

In charge:

Professor Claes Tropè Tel: 22 93 56 84

E-mail: <mailto:c.g.trope@medisin.uio.no>>

1. Assemble 07.30 Tuesday/Wednesday, 08.15 Thursday in the lobby.
2. Get white clothing at ("Tøysentralen"/ AU 327, floor U3.) Bring indoor shoes. Changing room at /Radiumavdelingen/ (3rd floor, 1st door to the left).
3. Attend at /Røntgenavd/., /Røntgendemonstrasjon 3/ /(gyn.)/ C193, 1st floor: Tuesday, Wednesday 08.00, Thursday 08.45.
4. The students participate in regular round and examination. Assisting and observing in the operation room are possible.
5. The patients have the right to deny students to participate during examinations. For certain high risk patients the time under anaesthesia during an operation must be as short as possible, because of this students may not have the opportunity to participate.
6. The department makes an effort to have a designated doctor in charge of the students.

Paediatrics

Paediatrics

The Paediatric inpatient clinical rotation takes place at paediatric departments at Oslo University Hospital (locations Rikshospitalet and Ullevål) and at Akershus University Hospital (AHUS). The students are divided into **K-1/K-53** and **K-101/K154**. **K-101/K-154** takes the Paediatric clinical rotation during the first half of the semester and then switches to Gynaecology and Obstetrics; **K-1/K-100** rotates the other way around.

Both teams are divided into two groups, one larger for Oslo University Hospital, the other smaller group for AHUS. Pay attention to the time and location details in the schedule: they vary!

For the Oslo University Hospital student group: From spring 2011 the clinical teaching in Paediatrics at Oslo University Hospital will include teaching for the whole student group at both Ullevål and Rikshospitalet in the same rotation. This has changed from previous semesters, where one half received the clinical rotation at Rikshospitalet, the other at Ullevål. This change is due to altered patient allocation due to the reorganisation of Oslo University Hospital as well as within the health region (Helse Sør-Øst). For the first time, the rotation includes clinical teaching at the Paediatric Emergency room at Oslo Kommunale Legevakt (one day obligatory and one day voluntary),

Categories of clinical teaching

1. Clinical small group teaching on the different paediatric wards.
2. Instruction in the out-patient clinics.
3. Teaching at health centres of Oslo and Bærum.
4. Teaching at the Emergency room at Section for Paediatrics, Oslo Kommunale legevakt (Legev)
5. Independent self study in the paediatric units
6. Shadowing the doctor on call.
7. Duty in the Paediatric Emergency Room, Ullevål.

Further details will be given to students on arrival at Ullevål and Rikshospitalet.

All mandatory teaching must be signed for by the instructors in the signature booklet. A minimum of 80 % presence is required to participate in the written and oral examinations.

Oslo University Hospital, location Rikshospitalet

Clinical small group teaching at *Barneklubben, Rikshospitalet*

Bring: stethoscope, indoor shoes, white coat and white clothing, ID card and instruction material.

Paediatric Clinical Examination. Presentation of the Children's Department (Barneklubben), and an explanation of the clinical teaching in Barneklubben followed by a demonstration of history taking and examination of a child.

When and where: Meet in the entrance hall of Barneklubben, see instructions in the schedule. **Mandatory.**

Bring: White coat and indoor shoes!

Small group teaching on the wards (CW) (Lektorundervisning).

Clinical teaching with an instructor in the paediatric department, four students to each group. The focus will be on history taking and examination of children of differing ages.

One week in the neonatal intensive care unit (NICU) either at Ullevål or Rikshospitalet, one week on the wards and one week in the outpatient clinic.

Where and when: Meet at Room E1.2034 (Kollokvierom) Monday, Tuesday and Wednesday at 08:30.

Mandatory.

Outpatient clinics (OC). Meet an instructor at the outpatient ward for a 30 min morning session. The students should present patients from the previous day during this morning session. Thereafter the students will sit in with a doctor during consultations.

Where and when: Meet on the first floor in the Outpatient clinic. Meet outside university secretary, Room E1 1019, Monday, Tuesday and Wednesday at 08:30. **Mandatory.**

Voksentoppen Center for asthma og allergy (VT). Mandatory. The activities at Voksentoppen have from August 17th 2009 been moved to the Paediatric Clinic of Oslo University Hospital, Rikshospitalet. This is still marked as VT in the Semester book. The students will be introduced to working with asthmatic and allergic children in a specialist national center. NB Please do not wear perfume. Please meet at Room E1.1016 (Kai-Håkon Carlsen) at 8.30, Ground floor in the Dept. of Paediatrics.

Emergency room at Paediatric Section, Oslo Kommunale Legevakt (LEGEV), Storgaten 40 (Allmenn legevakten). For the mandatory day, meet at 17.30 (5.30 p.m.) The voluntary day will be agreed upon during the mandatory day. **Bring: White coat and indoor shoes!**
Mandatory and is not included in the general rule of 20% absence (one evening).

Health Centre (HC) Check the different times and location in the *Helsestasjon* information booklet.
Mandatory.

In the Skills lab at Rikshospitalet, practice examination of children prior to HC visit. Sign-up on the bulletin board. Not mandatory

Independent self study (ISS). This learning method is based on participating in the normal work of the department. Attend the doctors' morning meeting at 07:45 in room D1.2043. Thereafter you move on to the respective wards for the pre-ward round meeting, ward round (visitt) and also to take part in the daily work on the wards.

Presentation of a written patient record: During your ISS at the department you are expected to take the initiative to contact patients and parents for medical history examination and also to physically examine patients on your own initiative. Always contact the responsible nurse on the wards, and if possible your resident tutor, before approaching the patients/parents. Half of the students present the written record at Rikshospitalet, and the other half of the student prepare this at Ullevål. Presentation of a written patient record is mandatory and is not included in the general rule of 20% absence.

You are expected to make contact with patients and parents on the wards to take medical histories and examine patients at your own initiative. **Always** ask the nurse in charge on the ward which patients/parents are suitable. **Mandatory: To present one patient's written medical history at the Case meeting. Meeting room D1.2043 A/B, 13:00-15:00. Please bring a copy of the history for assessment by the tutor.**

Shadow a doctor on call. Voluntary duty that offers authentic learning situations in the department. One evening during the semester.

Important: In order for you to be more accessible during this duty you can collect the student-air call pager at the reception desk by the main entrance to Rikshospitalet. You must sign for the pager when you pick it up and return it to the same place after your duty.

Where and when: Meet the doctor on call at the duty report: *Ward 2*, by the front desk at 15:00. Sign-up on the bulletin board in the university secretary's office. **Not mandatory.**

Oslo University Hospital, location Ullevål

Introduction day:

Presentation of the Children's department (Barnesenteret) and explanation of the clinical teaching. White coats and booklets for the paediatric rotation at Ullevål hospital will be distributed.

Where: Meet in the entrance hall of Barnesenteret as shown in the schedule. **Mandatory.**

Clinical small group teaching:

Bring: stethoscope, indoor shoes, ID card and instruction material. Change to white clothes before meeting.

Teaching with an instructor in groups of three to four students.

One week in the neonatal intensive care unit (NICU) either at Ullevål or Rikshospitalet, two days on the wards and one week in the outpatient clinic (either at Ullevål or Rikshospitalet).

Where: The meeting room at the infection unit on the Ground floor (1.etasje), wear white clothes. Mondays and Tuesdays at 08:30. We start the day with a meeting (30 minutes) where different paediatric topics will be discussed; you can ask questions and present some of your paediatric experiences from the day before. At Wednesdays we start at 8:15 with case presentations from students in Independent Self Study week. There are no plenary sessions at Thursdays, which means that you meet at 9:00.

At 9:00 the different teachers will come to the meeting room and collect the students and take them round the department in small groups. **Mandatory.**

Health Centre (HC):

Find the different times and locations in the Health Centre booklet. **Mandatory.**

Independent self study (ISS):

The last two weeks at the children's department, you are welcome to participate in the routine work of the department from the morning. See table. You will do in depth investigation of one patient. This patient and his/her relevant disease shall be presented in a case meeting (usually the following Wednesday), mandatory, not included in the rule of 20% absence.

Duty in the Paediatric Emergency Room:

Voluntary duty one afternoon, evening and night during the semester. One student follows the doctor on call. Here you have the opportunity to meet patients and parents, take a history and examine them (H&P).

Where: Report to the Emergency Room at Barnesenteret (Mottaket), Ground floor at 16:00 (earlier if you can). You shall sign up at a list at the student section at Ferdighetsenteret, Rikshospitalet. This duty is strongly recommended.

Akershus University Hospital

Clinical small group teaching at the Department of Pediatrics.

You should bring your stethoscope, oto-ophthalmocope, indoor shoes and if you have them, ID card and instruction material. Change to white clothes before meeting.

Pediatric clinical examination and introduction

Presentation of the Department for Child and Youth Medicine (Barne- og Ungdomsklinikken, BUK) and introduction to the clinical programme and education in clinical skills. Demonstration of history taking and examination of a child. Responsible are the Research Fellows (kliniske stipendiater) at BUK & Faculty Division at AHUS.

When and where: August 22nd, time 13.30-15.30 for students K146-154 and October 26th, time: 13h-15h for students K46-53. Meet at the UiO area at BUK 1st floor. **Mandatory.**

Small group instruction on the wards (CW)

Teaching by the Professor or Research Fellows given in groups of two students in the Department of Pediatrics. The focus will be on history taking and examination of children at various ages.

Where and when: See clinical rotation table (next page). Meet at the UiO area at BUK 1st floor, preferably when the doctor's morning meeting starts at 08.00, however **Mandatory** from 09.00.

Outpatient clinics (OC). Meet a medical doctor at the outpatient clinic. Thereafter you will accompany a doctor during his/her consultations.

Where and when: Meet at the outpatient clinic (Barnepoliklinikken) at 08.30. Before this you may follow the doctor's morning meeting. This starts at 08.00 and lasts until 09.00. **Mandatory at the outpatient clinic** from 08.30.

Supervision by nurses (SN) in equipment and medication devices for treatment of obstructive lung disease and diabetes. Where and when: Outpatient Clinic – ground floor. Time to be decided later. **Not Mandatory.**

Health center (HC): Look up the different times and locations in the Health Center (Helsestasjon) information booklet and at the bulletin board on the wall Meet at the UiO area at BUK 1st floor.

Mandatory.

Independent self study (ISS). This learning method is based on the student's participation in the regular work of the department. You will be expected to attend the morning meeting at 08.00 in the meeting room at the UiO area at BUK 1st floor at 08.00. Thereafter you will take part in the respective wards for the pre-round and round (visit) and take part in the daily work on the wards. Under guidance by the professor you are expected to take the initiative to contact patients and parents for medical history examination and also to physically examine patients on your own initiative. The specific patients will be discussed afterwards. Always contact the responsible nurse on the wards, and if possible your resident tutor, before approaching patients/parents. **Not mandatory.**

Case Meeting (CM): To give a presentation on a medical subject or to present a written record of one patient. Please bring a copy of the record for assessment. When and where: **TO BE DECIDED LATER** by students and professor Nakstad (93404858/ britt.nakstad@medisin.uio.no) **Mandatory. Presentation of a written patient record is mandatory and is not included in the general rule of 20% absence**

Follow a doctor on call. Voluntary duty that offers authentic learning situations in the department.

Where and when: Meet the doctor on call for the shift report at BUK 1st floor at 15:00.

Sign-up on the bulletin board at the UiO area at BUK 1st floor. **Not mandatory.**

5.5 Practical Small Group Teaching

(Course and Demonstrations)

Tuition in Anatomy, Histology, Pathological Anatomy and Histopathology of the reproductive organs will include course overviews, demonstrations, demonstrations with macroscopic preparations and microscopy. The teaching will be in small groups and will primarily take place during the first half of the semester.

Anatomy with macroscopic preparations:

Macroscopic anatomy will include demonstrations of preparations as an alternative to dissection. Preparations and models will also be available for independent study.

Histology:

At the beginning of the week an initial overview of that week's subjects is given to the entire class. At the end of the week the class is divided into two groups for practical microscopy with the instructor (questions, answers, video demonstrations).

Pathological Anatomy:

Teaching in pathological anatomy will include:

- Female and Male genital systems
- Malformations and tumours in children

Teaching sessions will be held with groups of seven or eight students. The allotted time is approximately 1½ hours; this includes time for independent study (the teacher will provide a guideline of what to study, particularly for the final session). These courses take place over several weeks and will include a small selection of preparations.

Group 7 and 14 will have the practical teaching and learning sessions in microscopic and macroscopic pathology at Ahus, see the list in the timetable. The teaching sessions will be in the Department of Pathology, B104.004.

Histopathology:

Kits containing approximately 35 preparations will be distributed for use. These kits with preparations demonstrating pathological changes will be stored together with kits of normal histological preparations so that students can compare them to one another. We recommend you go through 5 preparations a week, preferably during weeks when these preparations are relevant to the concurrent clinical rotation. The time needed to go through an entire kit of 30-35 preparations is about 6 hrs. The teacher will go over all the preparations in plenary sessions with the class, approximately 5 preparations for each course (a total of 6 hours for all the overview sessions). The aim of this instruction is to coordinate a histological overview with the clinical topics being taught. Also available for independent study in Pathology are:

- a study room in the library with six microscopes and corresponding histological preparation kits
- a multiple station microscope, whereby groups of up to 10 students can study the same section, located in room B2.1012 in the student Skills Centre (*Ferdighetssenteret*)

7. Examination and Evaluation

Examination rules, legitimate reasons for absence

The rules and laws concerning examination procedure at The University of Oslo for the degree cand.med. according to the curriculum of 1996 § 11, says:

"Students who do not have a legitimate reason for being absent from an examination are not allowed to attend the re-sit examination, and will be transferred to the following class".

The following reasons qualify for a re-sit examination:

- a) *The student falls ill prior to the examination (this must be confirmed by a written letter from a doctor)*
- b) *The student falls ill during the examination (the students must immediately contact the Student Health Service at Blindern)*
- c) *Students who have not passed the previous examination*
- d) *Other important reasons: for example, death in the immediate family*

Scoring of the examination:

The purpose of the scoring of the answers at the different stations is to improve the feed-back to the students about the level of performance. All students who have participated in the exam will (in

”Studentportalen”) be given a scoring between 0-100% correct answers. Students who are given a score of 65 % or higher will pass the exam, unless failing in one of the 4 disciplines (gynaecology/obstetrics, pediatrics, anatomy/physiology, pathology). Therefore, it is possible to get a total score of 65% and still fail the examination).

Students with a score below 65% will fail the exam. These students will be informed in writing. Students failing the exam (mean score of 4 disciplines below 65%) or failing in one of the disciplines will have to take an oral exam (called “viva”, short for viva voce) within those disciplines February 28th 2012. If students also fail (in one or several disciplines) at the viva, they will have to take the entire station-based exam again next term.

At examinations where failing a part of the examination implies failing of the entire exam (as in the semesters no. 1, 7, 9, and 10), the scoring will still be calculated as a mean of the scoring of the single tasks. Thus, the mean scoring may be above 65% even if the student fails the examination, because of failing one of the individual parts. The cause of failing will then appear in the written information that the student will receive.

For the semesters 1, 7, 8, 9 and 10 individual scores of the different parts of the exam will not be given.

Examination in the 9. semester.

Upon decision of the Board of the Medical Faculty the examination in the 9th semester have been changed from the autumn semester 2008.

The new examination from autumn semester 2008 consists of a station-based examination prepared partly according to the OSCE principle. This examination will consist of multiple stations in the following disciplines: Obstetrics/gynaecology (8 stations); paediatrics (8 stations); anatomy including physiology (3 stations) and pathology (2 stations). The examination in prescription writing for Norwegian students will be organised on a separate day. Altogether there will be 23 stations incl. 2 restingstasjoner, each with duration of seven minutes. Between each station there will be a pause of one minute for transferral to the next station. In addition to the stations set up above, there will be two stations for seven minutes rest. The tasks /questions will test both knowledge and clinical performance. This will include stations with patients/actors; stations with models, stations with video based questions, image based questions, short essay questions and multiple choice questions. There will be no ordinary oral examination, but students failing within one of the disciplines will have to take an oral continuation exam within the failing discipline. If students fail in two disciplines, they will have to take two oral continuation (resit) exams, but if they fail in more than two disciplines they will have to take all four disciplines at the continuation exam. If a student fail in one or more disciplines at the continuation exam (resit), they will have to take the entire station examination again next semester.

Practical anatomy test (compulsory)

A compulsory macroscopic-anatomy test will be held some weeks after completion of the anatomy teaching. This test must be passed before a student is allowed to enter the final exam of the 9th semester. The test consists of about 20 stations with anatomical specimens and models. The students are required to name about 70 structures on a sheet of paper as they proceed through the stations. Each student is allowed 45 minutes to complete the test. Seventy percent of the answers must be correct to pass the test. The results will be made available in two days after the test. Those who fail will be given a second chance in about two weeks.

Practical histopathology test (compulsory)

A compulsory test will be held some weeks after completion of the pathology teaching. This test must be passed before a student is allowed to enter the final exam of the 9th semester. This test consists of a microscopy station with histopathology sections of selected specimens of relevance. The

students are requested to describe features characteristic of the pathological alterations, answer questions and to discuss clinical implications of such histopathological changes. Each student is allowed 45 minutes to complete the test. Sixtyfive percent of the answers must be correct to pass the test. Those who fail will be given a second chance in about two weeks.

Testing of skills in writing prescriptions (not applicable for Incoming Exchange Students).

In order to obtain a temporary licence (midlertidig lisens) to practice as a physician, students are required to pass a test to document their knowledge of drug and prescription regulations and skills in writing prescriptions. This is a one hour written test which will take place Wednesday, Semesterweek 14. For those not passing the test, a new test will be scheduled before the end of the semester. Students are not required to pass the test before commencement of the 10th semester, but must pass the test before starting the 11th semester. A temporary licence will not be issued until the test is passed.

THE SPRING SEMESTER STARTS ON MONDAY JANUARY THE 30th 2012

8. Forskerlinjen (“The medical research curriculum”)

11. Practical Procedures/*Ferdighetssenteret*

It is important to note that this list does not cover all clinical skills required for medical students, but merely some well defined, simple practical procedures that should be learned. The list also describes the skill level to be achieved and suggested learning method(s).

The students are responsible for learning the procedures to the specified level.

Explanation of tables

Level:

A certain skill level is expected at the end of the semester:

1. Student has observed the skill/procedure being conducted.
2. Student has conducted the skill/procedure on a model/dummy/specimen/student.
3. Student has conducted the skill/procedure on at least one patient.
4. Student can conduct the skill/procedure independently

Learning methods:

Method(s) that can be used for learning a procedure. A - D refers to four alternatives:

- A. During clinical "bedside" small group teaching
- B. At the ward/outpatient clinic, outside of organised teaching
- C. In the *Ferdighetssenteret* (Skills Centre)
- D. At specially arranged courses

Continue (cont sem): Indicates whether learning of a procedure should be completed (C) this semester or if it continues in a later semester (e.g. semester 10).

Practical skills-list for the 9th semester

Procedure	Level	Learning Method	Cont. Sem.
Gynaecology/Obstetrics			
Taking microbiological samples from the vagina	3	b)	C
Taking cytological samples from the cervix	3	b) + c)	C
Perform symphysis-fundal measurements	3	b) + c)	C
Palpate fetal position	3	b)	C
Count fetal heart rate using a midwifery (Pinard) stethoscope	3	b)	C
During labour examine the woman and estimate dilatation of the cervical canal	3	b)	C
Assist a normal birth	3	b) + c)	C
Assist caesarean section	3		C

Paediatrics			
Body temperature measurement	3	a) + b) + c)	C
Insert an intravenous cannula (<i>legge inn venflon</i>)	1	a) + b) + c)	C
Capillary blood sampling	1	a) + b) + c)	C
Spinal puncture	1	a) + b) + c)	C
Suction of the nostrils	3	a) + b) + c)	C
Insert a nasogastric tube	1	a) + b) + c)	C
Administration of medication	1	a) + b)	C
Administer medication for inhalation	1	a) + b)	C

Vaccination and understanding the test result	1	a) + b)	10
---	---	---------	----

11.1 Skills Centre (*Ferdighetssenteret*) at Rikshospitalet

Skills Centre at the National Hospital (Rikshospitalet)

<http://www.med.uio.no/klinmed/studier/ressurser/ferdighetssenteret/>

The Skills Centre is open for all students from 3rd semester to 12th semester. Your student card gives you admission to the centre.

The centre is open 24 hrs /day and is located next to the Library, at the side entrance to the hospital, near to the Rikshospitalet tram-stop.

The Skills Centre is where you, either alone or with some other students, may improve your practical skills before training on patients on the wards etc. During your medical training, you may practice on procedures that are relevant to your current semester, or you may repeat other procedures. There is also group instruction in the time-schedule for 3rd and 4th semesters. Other sessions will be arranged depending on student's preferences (see www-pages). The focus will be on knowledge, attitudes and skills for each procedure. If possible, the training should be coordinated with clinical training on patients.

The Skills Centre consists of five rooms for training:

Room 1:

Heart and Lung Resuscitation: Training facilities for intubation, ventilation, cardiac massage as well as advanced training with the use of a simulator (Heartsim 4000).

Room 2:

Infusion/ skin suturing/ catheterization/ arterial blood sampling: Models for training on these procedures are available. Also, students may train on venipuncture or i.v. cannula insertion on colleagues.

Urinary catheter insertion on male and female models may also be practiced.

Room 3:

Obstetrics and gynaecology: Different models as well as examination equipment is available for practicing gynaecological and obstetric procedures.

Room 4:

Ear-Nose-Throat /Eye / Neurology: Models for training on different procedures such as otoscopy, ophthalmoscopy, lumbar punctures etc. are available.

Room 5:

Thorax/abdomen: Examination bench, models for training in rectal examination, with different prostatic changes to be palpated, are available.

Rooms for group session: 2 rooms at the centre are dedicated to group sessions.

In addition, digital stethoscopes with 5 headphones attached may be borrowed by students or teachers.

Computers: 16 PCs as well as a multimedia developers' PC are located in the PC room found at the Skills Centre. In addition, there is a PC in each of the Rooms 1-5 as well as the Group rooms. An additional 12 PCs are found in the basement below the Skills Centre in a separate PC-room.

By using the computers, you may access our multimedia programs, specifically made for our medical students. By using our homepages (see the heading above) you may access these programs from anywhere, as long as the network is good (i.e. not by modem).

Monday to Friday there is always a student available for Help-desk support at the Skills Centre - located in Room 1. 5. These medical students are employed as student instructors, to assist in the teaching as well as routine maintenance of the centre.

For more information: please contact Assoc. Professor Hanne Storm, Skills Lab. Phone: 23074398 or e-mail: hanne.storm@medisin.uio.no

The Skills Centre organises new courses

The following courses will be organised once a month:

- Gynaecology: Insertion of an IUCD, cytological and microbiological testing
- Neurology: Lumbar puncture
- Skin suturing
- CPR (cardiopulmonary resuscitation)
- ECG. Exercise test

More information about the courses and lists for signing up will be presented on our clip board next to the library at Rikshospitalet. The information will also be sent by e-mail.

12. The Teaching Hospitals

The Faculty of Medicine at the University of Oslo comprises several teaching hospitals. The five major ones (called University Hospitals, *universitetssykehus*) are Aker universitetssykehus, Det norske radiumhospital (DNR), Oslo University Hospital, Rikshospitalet and Ullevål as well as Akershus universitetssykehus (AHus). In addition there are a large number of other teaching hospitals and clinics in Oslo and its surrounding areas.

AKERSHUS UNIVERSITETSSYKEHUS (AHUS)

<http://www.med.uio.no/english/studies/programmes/places/ulleva/ulleva/index.html>

ID-Card at Ahus

At Akershus university hospital you need an identity card to get access to the different departments at the hospital, work clothes, computers with patient information, parking facilities. It is therefore very important for you to have completed the obligatory course before you arrive at the hospital:

To be able to get an identity card at the hospital you have to complete 4 obligatory e-learning courses. You will get an e-mail with username, password and instructions as soon as we have received the information needed from the registration office at the University about which students are going to be at Akershus University Hospital. The courses can be done on any PC with internet access.

The students who have already gone through the course and received an ID-Card earlier do not have to do it again. You only need to reactivate your card.

Oslo University Hospital, RIKSHOSPITALET

<http://www.med.uio.no/english/studies/programmes/places/rh.html>

Rikshospitalet is the oldest university hospital in Norway. In 2000 Rikshospitalet moved into new buildings.

Studentkontoret is on the 3rd floor in section B1 (see map of Rikshospitalet). Here you will find the semester coordinator Eva Gretland. The purpose of the office is to take care of the student's immediate needs in matters that concern teaching and facilities at Rikshospitalet.

ID cards for Rikshospitalet will be issued to the medical students from the start of the 3rd semester. Students who do not have ID cards should contact Eva Gretland or Britt Løken.

The ID card expires at the calculated time of graduation. If you have taken a leave of absence, you must have the expiration date on your ID card changed.

Auditoriums (*lecture rooms*) are in section B. In the main lecture hall (*Store auditorium*) there is room for 399 people. In the basement (*underetasjen*) there are three smaller auditoriums/lecture halls. If you wish to use the auditorium contact the Secretariat on the 3rd floor, section B1. Tel: 23 07 09 38.

The library (*Bibliotek for medisin og helse*) can help you search on the internet and find relevant articles and/or books. This is also where you can buy copying cards for *UiOs* photocopy machines. One part of this library is in the main lobby at *Rikshospitalet*, another part is in the nearby (basic science institutes) in *Domus Medica*. The library has a "drop in" course every day at 14:00.

Reading rooms (*lesesaler*) are located close to the *Skills Centre* and has a total of 150-160 seats. Only students in semester 12 are given permanent reading room seats.

Computer rooms are near the reading rooms in section B.

Student changing rooms, locker rooms and book cabinets (*studentgarderober*) can be found on U-floor (basement) in section B. Use your ID card to get in. The lockers and book cabinets are reserved for the students that are assigned to teaching at Rikshospitalet.

Hospital clothing (white clothes) are in cloth boxes in a separate room next to the student changing rooms (*studentgarderobene*).

Bulletin boards are in the corridor next to the reading rooms.

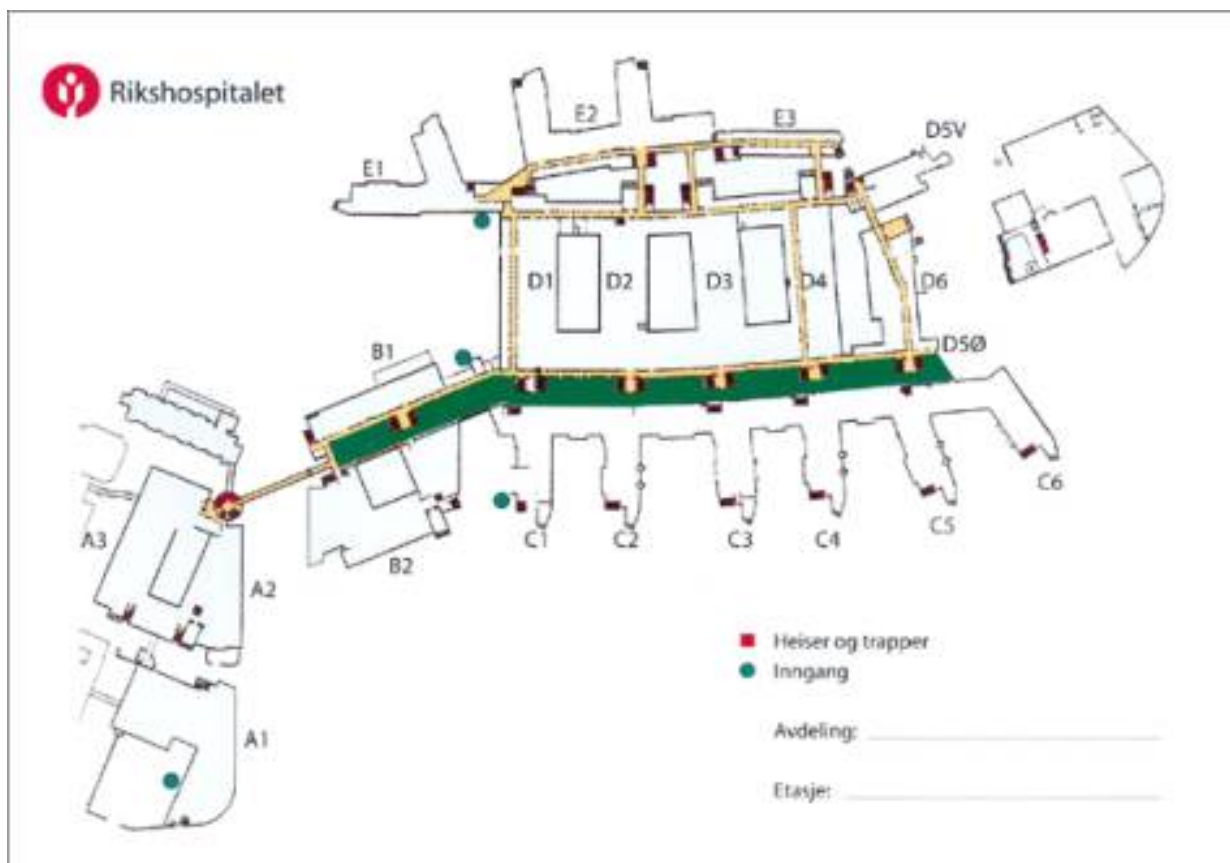

Small group teaching and discussion rooms (*kollokvierom/smågrupperom*) are on the M floor (above *Store auditorium*) in section B2. These rooms are used for PBL-sessions, but are also available for students when they are not in use. Reservation lists are posted outside the rooms every Thursday. There is also a conference room that can be used next to the library.

Baby changing room/break room (*Stellerom*) for pregnant students and students with small children is on the 1st floor in section B1. You can borrow a key for the room by contacting the Secretariat on the 3rd floor in section B1.

Cafeteria (*Kantine*) is on the 1st floor in section B. You have access by using your ID card.

Photocopy machines are at *Domus Medica*. You can buy copying cards at the library.

Map of Rikshospitalet

Oslo University Hospital, ULLEVÅL

This is the largest hospital in Northern Europe. It consists of many buildings over a large area, and it can at times be difficult to find your way around.

The University administration at Ullevål (tel. to reception: 22 85 05 50) has administrative responsibility for semesters 5, 6, 8 and 10 in medicine. Secretaries in charge are **Venke Jenssen**. The secretariat of research institutes in the Faculty are located at *Søsterhjemmet*.

ID cards for Ullevål can be obtained at ID-kontoret, which is located at *Søsterhjemmet* (1 st floor), Ullevål

Bulletin boards are outside most auditoriums.

Cultural events are arranged in the hospital. You can find information about this at the various departments and posts in the hospital. There are also announcements in the internal newspaper "*Ullevål-Nytt*". There are groups for people who are interested in various forms of music and there is also a good chance that a theatre group has a piece in progress during your period of study.

Medical meetings for all doctors at *Ullevål* take place every Friday 07:45 – 08:30 in the *Store auditorium* in *Midtblokken*. The topics for the meetings are posted at the hospital departments. In *Patologibygget (legedemonstrasjonsrommet)* a pathology demonstration will be held daily at 11:30 – 12:00. The pathologist will give an account of the deceased. Students are welcome. Wear one of the white coats that hang outside the *legedemonstrasjonsrommet*. In addition, there are daily meetings for each section at *medisinsk klinikk* and *kirurgisk klinikk*.

Accompanying the doctor on call is a possibility if you are interested. Contact the doctor on call directly (you find the name of the relevant doctor on call from lists that can be found at the department office). At the front desk there you can get a "*dobbelt-calling*", so you can follow along with the doctor when doing consultations.

Hospital clothes (*frakker*) can be found near *Garderobene*. In *kirurgisk klinikk* all hospital clothes are in one room in the basement near the main entrance. The code to get into the room is 2547. Note that some of the wards/departments are not equipped with enough coats (or white shirts and trousers).

Changing rooms/showers are in *kirurgen*. The changing rooms are limited at *Ullevål sykehus*.

Cafeteria's (*kafeteria*) are open during regular working hours and are found in *Sentralblokkens* 1st floor in *Resepsjonen* and in *Patologibyggget*. In *Søsterhjemmets kantine*, you can buy dinner between 13:30 and 16:30. Coffee/chocolate machines can be found outside department offices at *medisinsk* and *kirurgisk klinikk*. There is a small shopping complex close to the entrance of the hospital.

Reading room. There are also reading spaces in the library on the 7th floor in *Midtblokken*.

Book lockers are in the basement of *Patologibyggget*. Contact the reading room attendant to obtain a key.

Small discussion rooms (*Kollokvierom*) are available in *Patologibyggget* and in various departments at *Ullevål*. Ask for local information.

Lecture rooms/auditorium are located in each department. *Store Auditorium* (235 seats) is in the *underetasje* in *Midtblokken*. The auditorium in *Patologibyggget* has 90 seats. If you wish to rent or use the hall in *Kirurgisk*, *Medisinsk* or *Patologiskbygget*, contact the person who is on the bulletin board outside that room/auditorium (*auditorieansvarlig*).

Medical Library at *Ullevål universitetssykehus* is exceptionally good. It is on the 8th floor in *Midtblokken* and is open Monday-Friday 08:00-18:00. They have journals, books, videos and magazines available and a computer room with internet access. There are reading places on the 7th floor, but be aware that hospital employees have priority there. The library arranges daily "drop-in" courses where students can participate. For more information about what the library has to offer see: <http://www.usmedbib.uio.no/>.

Sentralblokken was opened in 1995 and is where the department of surgery (*kirurgisk avdeling*) is housed. *On the 1st floor is the emergency room* where there is also a room for students, a room for CR and more operating rooms. *On the 2nd floor in Sentralblokken you find the operating theatres with nine operating rooms, a large postoperative ward and a large intensive care unit.* *On the north side of Sentralblokken, between this and Midtblokken, you find KAM-bygget with offices on the 3rd floor, an auditorium and conference rooms.*

Service-senteret includes a supermarket, perfumery, hairdresser, newsstand, a post office and a bank (*Kreditkassen*). To get a taxi call (internal nr.) 18148 or 73965/66.

Sports activities are arranged both at the University campus and at the hospital and you are free to participate. There are many different types of sports (in the indoor field/court and barracks). For information about membership fees and practice times go to *klubbhuset "Villa 4" v/plasthallen*.

Domus Medica

Exchange students can obtain ID cards for Domus Medica from Exchange Coordinator Anne Westheim. This applies to exchange students staying less than six months or until they get their student card.

13. Hospital Laws and Rules

(Sykehusloven av ... Lov om helsepersonell av ...)

Always remember the promise of Confidentiality that you have signed!

Remember that this also applies to the patient's relatives. Even if you receive information from friends and relatives, you can not give them medical information back about the patient/deceased. The superior court has decided (*Høyesterettsdom*) that Norwegian patients have the right to see their own medical records. This means that only the patient or an authorized person (by the patient) can read the medical record. The doctor should be there during the reading of the record. The medical record can not be removed from the department as it is the property of the hospital. Copies can be made though. The head of each department gives the guidelines for the method in which the reading of a journal is to be handled. If a patient asks to read his/her medical record you should refer them to the doctor who is responsible for his/her treatment.

Death Criteria

A person is dead according to Norwegian law when there are definitive signs of total damage of the brain with a complete and irreversible absence of all cerebral, cerebellar and brain stem functions. Permanent absence of spontaneous breathing and heartbeat are signs of total damage of the brain. All the following criteria must be found to diagnose a person dead:

1. Established disease, process or injury intracranial
2. Total unconsciousness
3. Permanent absence of spontaneous breathing
4. Permanent absence of cranial nerve reflexes
5. Permanent absence of electrical activity in the brain (isoelectric or a "flat" line in the EEG)
6. Permanent absence of blood circulation to the brain, diagnosed by cerebral angiography (radiological examination of the blood vessels after the injection of a contrast medium)

Chapter I. Transplantation

§1

Organs or biological material can be used for the treatment of a disease or injury in another person if the donor has given written consent. Surgery can only be done if it does not endanger the donor. Consent can only be given by persons 18 years and above. In certain circumstances minors (under 18 years) can also give consent if it is approved by their parent(s) or legal guardian. If this is the case, the approval for the surgery must be obtained from *Helsedirektoratet*. Before consent can be given, a doctor must give the donor or all important information concerning the surgery and possible consequences. The doctor is obligated to make sure that the persons concerned, the donor, has understood the information and its implications.

§2

Organs and/or other biological material can be taken for the treatment of disease or injury of another person if the diseased has given written or oral consent. Even if this consent has not been given, surgery can be done on a patient that dies in the hospital or arrives dead after transportation, unless the diseased or his/her relatives have expressed that they are explicitly against it, or if there is reason to believe that the surgery would be against the patients or relatives religion and/or ethics or if there are other important contraindications. If possible, the relatives should be informed about the death before the surgery takes place.

§3

Surgery as mentioned in §2 must not be done when question of a forensic autopsy could arise and the surgery could influence or destroy this autopsy result.

§4

Before the surgery mentioned in §2 can be done, the death must be confirmed by two doctors that are not performing the surgery/transplantation. The surgery must be registered according to protocol. The protocol must include the following information: time and cause of death, names of the doctors that stated the death and which examination procedures were used. The surgery can not be performed by the doctor that treated the patient prior to death.

§5

Surgery after §1 and 2 is only allowed at hospitals approved by the Norwegian king.

§6

Blood collection, removal of small skin pieces and other minor surgical procedures equal to this can be done without involving these regulations (Hospital Laws and Rules).

Chapter II. Hospital Autopsies

§7

For medical reasons autopsies can be done on those who have died at the hospital or other health oriented institutions as cited in *Sykehusloven* of the 19th of June, 1969 nr. 57 § 1 first paragraph, or on those who are brought in deceased to this type of institution. An autopsy can not be done if the deceased or her/his immediate family will not permit it. An autopsy can not be done if the deceased or his/her relatives have expressed that they are against it, or if there is reason to believe that this kind of surgery would be against the patients or relatives religion and/or ethics or if there are other important contraindications. An autopsy can not be done before the immediate family has been notified of the death, and eight hours have elapsed from the time of death. The autopsy can be done sooner if there is consent from the deceased or her/his immediate family. If there are justifiable reasons to find the cause of death without any delay, an autopsy can be done regardless of these terms.

§8

Autopsy after §7 can not be performed if there is reason to believe that a forensic autopsy will be requested.

14. Transportation to the Teaching Hospitals

DM/RH - Ullevål - sentrum: Frequent trams in both directions, lines # 10, 17 and 18.

DM/RH – Radiumhospitalet (DNR): Bus # 23 at Ringveien to Radiumhospitalet. Alternatively Holmenkollbanen subway # 1 to Majorstuen, then Kolsåsbanen # 4 to Montebello.

Akershus University Hospital: From central Oslo (Oslo Bussterminal), you may go by bus 402 and 414 all the way to the hospital. The buses stop outside the main entrance at Ahus. Further information: www.trafikanten.no

15. Glossary of useful terms

For the sake of clarity, the following terms were left Norwegian in the semester handbook:

Professions:

Assistentlege	Resident
Avdelingsleder	Head of the Department
Avdelingsoverlege	Chairman of the Department
Dr. med	PhD
Forsker	Investigator
Klinisk stipendiat	Research fellow/ Lecturer
Overlege	Consultant
Oversykepleier	Head nurse

Hospitals and departments:

Barneklubben/-avdelingen	Dept. of Paediatrics
Ferdighetssenteret	Clinical skills training centre
Gyn. avdeling	Dept. of Gynaecology
Barselavdeling	Maternity/Post-natal ward
Føde-/forløsningsavdeling	Delivery/Labour ward
Gyn. poliklinikk	Gynaecology out-patient clinic
Laboratoriebygget	Medical Laboratories
Røntgenavdelingen	Dept. of Radiology
Biblioteket for medisin og helse	Medical library
Garderobes	Changing rooms/Locker rooms
Kantine	Cafeteria
Kollokvierom	Conference room
Stellerom	Baby changing room/rest room
Senteret	The Centre
Sentralblokken	The Central Building
Tekstilrom	Laundry

Other:

Barnevernet	Children's Social Welfare Dept.
Helsekort for gravide	Handheld Antenatal record
Helsestasjonen	Primary Health Care Unit
Rapport	Shift report / hand over report
Studenthelsetjenesten	Student Health Services
Studentovernattingsrom	Student sleeping quarters
SF-mål	The distance between the symphysis pubis and uterine fundus in a pregnant woman (symphysis-fundal height)

**NB: Note that "floor" is used equal to the Norwegian "etasje" (4th floor = 4. etasje)
"Ground floor" is equivalent to Norwegian first floor**
